Keps, modes, etc?

You should be able to find the Keps for RS-16 in usual places,
but what you need to know is that it is object 24744 on the host
satellite ZEYA.

My homebrewed 'modes.dat' entry is:

```
Satellite: ZEYA
Object: 24744
Alias: RS-16
Frequency: USB USB 29.415 145.915 43 1
Frequency: CW NONE 29.408 0 0 0
Frequency: CW NONE 29.451 0 0 0
Frequency: CW NONE 435.504 0 0 0
Frequency: CW NONE 435.548 0 0 0
Mode: Ka
```

and the first frequency entry (and 'Mode') is somewhat speculative...

(Worldwide) Downlink 145.55 FM

---

* Radio Sport-15 has battery chargeing problems therefore the transponder
and beacon are silent when the satellite is in darkness.

* Radio Sport-16 currently has it's Mode A transponder turned off. The
ground controlers seem to be experimenting with the various beacons,
therefore it is difficult to predict which will be on, 29.408 seems to be
on most passes.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely
uplinked to it with a handheld on low power. On the other hand reception
of the 70cm downlink signal is more difficult without a directional antenna
most of the time. Therefore it is important to make sure
that you can hear the satellite downlink before you transmit therefor
avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time
of writing this satellite was reported to be in Analog mode.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital), at time
of writing this satellite was reported by Jalsat to be in Analog mode
until March 21.

This FAQ is constantly being updated and re-released on a weekly basis on
or about Monday. Any constructive suggestions are always welcome.

Subject: Internet in the Sky from a Big LEO

I read the following in a Reuter's story today. Note that Teledesic is
a Big LEO, not a Little LEO. These are not the guys trying to steal
amateur spectrum.

The FCC granted a license to offer Internet and telephone services over
the airwaves to Teledesic, a company backed by Bill Gates of Microsoft
and Craig McCaw (former chairman of McCaw Cellular Communications.)

The company will launch and operate a satellite constellation carrying
broadband communications of Internet, video-conferencing, interactive
multimedia, etc.

This is the first time that the FCC has granted this type of license.

McCaw claims that service will begin in 2002. (Saves them from that
pesky year 2000 problem, eh :-)

Their origional idea was to have several hundred satellites in low earth orbit
that would operate like moving cell sites (persons on the ground would appear
to be stationary) that would cover the entire earth. You could flip-phone
anybody anywhere on the earth at any time (if you had the $$$).

NOAA 12 and 14 working OK, but the first time
I tried to hear Meteor 3-5 (9:00Pm CST AOS Dallas, TX)
there wasn't a peep. This would have been a 55 Deg pass.
Is there some known sked for this sat?

Many "one size fits all" saddles offer very little surface
contact. I've gotten much better results by machining
my own out of square aluminum tubing to match the mast/boom
size I use--so I can tighten the antennas down by hand with
wing nuts. The EME types use milled blocks of aluminum to
do even better.--Zack Lau W1VT

Well, since you asked me to James, here I go.

Actually, you're almost perfectly correct. I think the satellite antennas
are something like 20 elements though. 10 pairs of crossed elements. :)

As for the fading, just repeating yourself till you get through works
pretty well.

Matthew

I guess it really depends on how patient you are. The Michigan Tech
ARC, w8yy, has had some success with rs-15. We have a 25W radio and a
directional satellite antenna (about 10 or so elements). CW is really

easy, that'd be your best bet. SSB is a a tad more difficult. Most of the trouble with SSB comes from the bird's spin, your signal will phase in and out. With good antennas, a reasonable amount of power (100 watts should be plenty), and a good sense of timing to deal with rs-15's spin, you should have no trouble working this satellite.

n9lmw will probably follow-up and correct any mistakes and perhaps give us a recount of his last experience with rs-15.

The bandwidth needs to be at least 35 45 Khz..otherwise you are clipping
off about half of the signal data.

There are ways to easily modify a scanner for this bandwidth.

you can get some tips on using WXSAT at:

http://members.aol.com/jkktl/ham.htm

WXSAT is THE BEST system out there for weather satellite reception!!

Better than any commercial hardware system!

It takes a little patience to set it up..but more importantly..what is
your receiver, antenna, computer graphics capability?

E me and check into the above web site!

957. NORAD Two-Line Orbital Element Sets (TLE962)

Newsgroup: rec.radio.amateur.space
Date: 1997-03-18 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5gknjg$rik@blackbird.afit.af.mil>
Source record: 19511

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

958. Phase 3-D???

Newsgroup: rec.radio.amateur.space
Date: 1997-03-18 00:00:00 UTC
From: jrybak@mesa7.MesaState.EDU
Message-ID: <5gmni1$b4c@mesa7.mesa.colorado.edu>
Source record: 19512

Will 3-D be able to operate in more than one mode at a time? Is there likely to be a "dominant" mode which is in operation more than some of the others?

I want to get myself setup to work 3-D but I don't want to choose a mode which will be inactive most of the time.

Thanks.

Jim Rybak W0KSD

$$$ READ THIS $$$

NEW VERSION FOR 1997!! (Legal questions addressed!!)

In late October of 1996, I saw an article in an internet
newsgroup telling me that I could make $50,000.00 within a month
for an investment of only $5.00. I thought, "OH YEAH!!! I'VE
GOT A BRIDGE I'LL SELL YOU TOO!!!"
It sounded like all the rest of the "get rich quick" schemes and
scams I've seen over the past few years.

I spoke to my attorney, a few friends and my wife about
it, and they all agreed it was some kind of scam. I can't stand
scams, because usually someone gets burned, and I didn't want it
to be me. After rejecting the idea at first, it kind of played
on my mind and I thought, "What if it really worked?" I realized
all I had to lose was $5.00, I usually blow that much on the
lottery every week anyway, so I figured what the heck, and
decided to give it a shot.

Within two weeks I began receiving money in the mail!
Soon, hundreds, and then thousands of dollars began to roll in.
Within 4 weeks, I had received a total of $41,219.00! It came
from everywhere in the world. Lately, I've doubled my efforts
and the money is rolling in even faster. I would tell you how
much but then the IRS would know also, let's just say it's a VERY
comfortable living. Now, I am really going to work! Anybody can
afford to gamble $5.00 on a chance to make $35,000.00 or more in
a month, especially when the business has already proven itself.

If you follow the three steps below, there is no reason why
the same shouldn't happen to you! This is a legitimate investment
opportunity. You invest $5.00, and you receive a return on your
investment. So does the next investor. THIS IS NOT ILLEGAL!
THIS IS NOT A CHAIN LETTER! THIS IS PERFECTLY LEGITIMATE!
(See additional legal details below.)

THE PROCEDURE IS SIMPLE:

1) Invest your $5.00 by writing your name and address on five
seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR
MAILING LIST." (In this way, you're not just sending a dollar to

someone; you're paying for a legitimate service.) Fold on $1.00 U.S. Treasury bill, money order, or bank note inside each piece of paper, and mail them by standard U.S. Mail to the following five addresses:

1. J. Russell
872 W. Bigelow
Findlay, OH 45840

2. Silvestre Domingo Magos
1833 Vicente Dr.
San Luis Obispo, CA 93405

3. L. Lehr
329 Lafayette Rd.
Carneys Point, NJ 08069-2543

4. G. Seidler
379 Walnut St.
Stoughton, MA 02072

5. K. Wade
2349 Thornhill st.
Terrace, BC. CAN
V8G 4Z5

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. You can do this by simply retyping the article or reposting it to other newsgroups with the edited addresses.

3) Post the article to at least 200 newsgroups. There are 22,000, so it shouldn't be hard to find that many. Remember, there are no "Free Lunches" in this world and so the harder you work the more money you will make.

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return will be. If you wish to remain anonymous, you may use a pseudonym, but make sure address is correct.

LEGAL ???

People have asked me if this is really legal, and it is. You are using the Internet to advertise your business. What is that business? You are assembling a mailing list of people who are interested in home based computer and online businesses and methods of generating income at home. REMEMBER - people send you small fee to be added to your list. It is legal. What will you do with your list of thousands of names? That's up to you.

HERE IS WHY THE SYSTEM WORKS:

The internet is growing at a tremendous rate - it doubles in size every 4 months. Think about it. You see those "Make Money Fast" posts more and more. All that growth means profits for everyone who participates. There are no losers.

Of every 200 posts I made, I received roughly 5 responses. That probably doesn't seem like much. You make $5.00 for every 200 posts with your name at #5.

Each person who sent you $1.00 now also makes 200 additional postings with your name at #4. i.e. 1000 postings. On average, 50 people will send you $1.00 with your name at #4. That's $50.00

Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people=$500.00. They make 200 postings each with your name at #2=100,000 postings=5000 returns at $1.00 each=$5,000.

Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE MAKES ONLY 200 POSTINGS! Total income in one cycle = $50,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5.00, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. The more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5.00, 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5.00 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "What happens if the scheme is played out and no one sends me any money?" BIG DEAL, so you lose $5.00. But what are the chances of that happening? SINCE THIS IS A BRAND NEW PROGRAM AS OF JANUARY 1997, YOU'RE IN ON THE GROUND FLOOR!

There are millions of internet users, and millions of new net surfers every month. REMEMBER - read the instructions carefully, and play fairly. THAT'S the only way this will work. Get a printout so you can refer back to this article easily.

Keep a list of everyone that sends you money, keep good books, pay your taxes, and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER - HONESTY IS THE BEST POLICY. WHAT IS $5.00 TO YOU? YOU DON'T NEED TO CHEAT THIS IDEA TO MAKE MONEY!!! (We will monitor the program and if we find you have cheated by not sending your money to your five recipients, we will just dump you out of the system.)

This is the easiest way that you can make a buck. Think how excited you'll be to open up your mailbox day after day! Will it be $50.00 or $5,000.00?? Start making your plans, because it can happen to you.

DON'T PASS UP THIS ONCE IN A LIFETIME OPPORTUNITY!!!

****

EXTRA SECTION:

HOW TO POST TO NEWSGROUPS FAST WITH YOUR WEB BROWSER:

The fastest way to post to a Newsgroup:

Simply highlight and COPY (Control-C for copy) the text this e-mail message and PASTE it into a text editor such as Notepad and SAVE it (as a .txt file).

After you have made the necessary changes that are outlined above, simply COPY and PASTE the text into the message section of the message composition window and to be posted to the Newsgroup and post it.!

****

If you have Netscape 3.0 follow these simple steps:

1) Click on any Newsgroup like normal, THEN click on 'TO NEWS', which is on the far left when you're in the Newsgroup page. This will bring up a box to type a message in.

2) Leave the Newsgroup box like it is, CHANGE the subject box to something flashy like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS entire article WORD FOR WORD, except insert your name at #5, and remove #1 off the list, plus anyother small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX.

Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIl YOU DO THIS. Once saved, move on to number 5 below.

NOTE: If you don't want to type in the whole article by hand, AND you know how to use a plain text editor (like NOTEPAD), you can edit the file ahead of time, then attach it as shown in step 6.

5) If you still have all of your text, send or post to this Newsgroup now just by clicking send, which is right below FILE, and right above Cc:.

6) Here's where you're going to post to all 200. OK, click on any Newsgroup then click on 'TO NEWS' , again in the top left

corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message. Click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click on the file, and then click 'OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it wil be shaded green.

Note: If you don't want to type in the whole article and you know how to use a plain text editor (Notepad), you can edit the file ahead of time, then attach it.

QUICK TIP!!!

You can post this message to many Newsgroups at a time by simply selecting a Newsgroup near the top of the screen, hold down the SHIFT key, and then select a Newsgroup near the bottom of the screen. All of the Newsgroups in between will also be selected.

IF YOU USE INTERNET EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, highlight this article. Then press the "control" and the "c" key at the same time to copy this article. Then print this article for your records, to have the names of those you will be sending $1.00 bills.

Go to the Newsgroup and press "post an article". A window will open. Type in your headline in the subject area then click in the large window below. Press "control" and the "v" keys and the article will be placed in the window.

If you want to edit the article, do so and then highlight and copy it again. Now every time you post the article in a new Newsgroup all you have to do is press "control" and "v" and press post.

That's all there is to it. Each time you do this, all you have to do is type in a different Newsgroup, until you have posted it to 200 or more DIFFERENT Newsgroups.

You see? Now you just have 199 more to go!!! (Don't worry each one takes about 30 seconds, once you get used to it.)

REMEMBER 200 IS THE MINIMUM. The more you post the more money you will receive. AND THAT'S ALL THERE IS TO IT!!!

DON'T LET THIS ONCE IN A LIFETIME OPPORTUNITY PASS YOU BY!!! START ENJOYING THE GOOD LIFE, YOU DESERVE IT!!!

SECOND CALL FOR PAPERS

HR AMSAT NEWS SERVICE BULLETIN 075.01 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-075.01

The 1997 Amsat-NA annual meeting and space symposium will be held
October 17-19 1997 at the Airport Delta Hotel in Toronto, Ontario
Canada.

This is the Second Call for Papers - Those who wish to present papers at
this event, should forward their request together with a title by April
1 1997. Topics may include all relevant Amateur Satellite disciplines.

Abstracts are required by June 1 1997 with final versions by August 1
1997 (so that they may be printed in the proceedings).

We also encourage those not able to attend to send papers for inclusion
in the proceedings of the symposium

Submissions and esquires should be made to:-

Wayne Chandler, VE3WHC

by internet: ve3whc@amsat.org (apologies to those who tried and
could not get in earlier)
By Mail Wayne Chandler
Box 6, Carlisle, Ontario
Canada. L0R 1H0

SB SAT @ AMSAT $ANS-075.02
AMSAT-UK 12TH COLLOQUIUM

HR AMSAT NEWS SERVICE BULLETIN 075.02 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-075.02

The 12th AMSAT-UK Colloquium will be held at Surrey University, Guildford, Surrey, U.K., from Friday 25th to Sunday 27th July 1997. This year's event will comprise three days of technical and operational matters only; there will be NO "political" subjects.

Amsat-UK invites authors to submit papers, about amateur radio space and associated activities, for this event and for the "Proceedings" document which will be published at the same time. It is normally preferred that authors present the papers themselves rather than having someone else read them in the authors' absence, but AMSAT-UK also welcomes "unpresented" papers for the document.

Abstracts of Papers should be submitted as soon as possible; the final date for acceptance has not yet been finalized but is likely to be 15 June 1997 in order that the "Proceedings" document be available to participants.

Submissions should be sent *ONLY* to G3RWL, via the following routes:

Internet e-mail: g3rwl@amsat.org
Packet Radio: G3RWL @ GB7HSN.#32.GBR.EU
Satellite: AO16/19/22/23/25
Terrestrial mail: R W L Limebear G3RWL
60 Willow Road
Enfield EN1 3NQ
United Kingdom.
AMSAT-UK also invites anyone with requests for Program Topics (and possible authors) to submit them as soon as possible to G3RWL as above. Invitations for papers on specific subjects will be included in the final call, at the end of April.

Information about the Colloquium will shortly be available on the World Wide Web pages at the University of Surrey on:
http://www.ee.surrey.ac.uk/CSER/UOSAT/amateur/colloq97.html

A change to the booking requirements has been made this year] such that AMSAT-UK will accept unregistered day attendees subject to space, but they will not receive a free lunch. As usual, facilities will be available for attendees who wish to arrive at UoS on the evening before the event starts.

This year a healthy coverage of microwave-related material pertinent to the advent of the P3D satellite will be presented, and that there will be microwave test equipment available on the Friday evening for people to check
their home projects. Availability of application forms to attend the Colloquium will be publicized later in the year.

NOTE: All other inquiries about colloquium-97 should be sent] to the AMSAT-UK
office: AMSAT-UK London e12 5EQ

[ANS thanks Richard Limebear, G3RWL, Colloquium Program organizer for this news item.]

MIR MISSION UPDATE

HR AMSAT NEWS SERVICE BULLETIN 075.03 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-075.03

U.S. astronaut Jerry Linenger, KC5HBR, has reached the halfway point of his mission aboard the Russian space station Mir, today is his 62nd day in space. For his two Russian crew members, its their 33rd day.
The primary oxygen generation system has been off-line for a week now. The Electron system shut itself down last week due to excess build up of air. Both Electron systems are having problems, Electron 2, which was their primary system has a filter bypass problem, some spare parts will be coming up on the next Progress cargo ship. Electron 1, in the Kvant 1 module is having pump problems. Spare parts are a problem, but some are being manufactured right now.

Scheduled Activities

Apr 6- (TENTATIVE) Progress M-34 Launch.

Apr 8- (TENTATIVE) Progress M-34 docking.

RS-16 LATEST

HR AMSAT NEWS SERVICE BULLETIN 075.04 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-075.04

B.J. Arts, WT0N, reports that during the March, 14th, 1740 UTC pass over North America, RS-16's 10 meter, 29.408 , 29.451 MHz, beacons were not heard. The 70 cm, 435.504 MHz and 435.548 MHz, beacons were active at that time. The 435.504 MHz beacon was very strong, an S-9. The 435.548 beacon was very weak, an S-1. WT0N tried the passband on 2 meters, 145.915 - 145.948 MHz, and listened on 10 meters, 29.415 - 29.448 MHz . He did not hear his downlink signal and assumes that the transponder is not yet active.

Here is the example of 435 MHz CW telemetry, received by UA3CR on the 12.03.97 orbit number 134, over Moscow.
Below are some important parameters:

RS16 RS16
P160 PSU voltage (16.0 Volts)
O0 Solar panel voltage
N0 Solar panel current
M0

L16
K92
J5
I7
H49
G0
F156
E10 Temperature inside 1 in C deg.
D12 Temperature inside 2 in C deg.
C12 Temperature inside 3 in C deg.
B11 Temperature inside 4 in C deg.
A9 Temperature inside 5 in C deg.

SB SAT @ AMSAT $ANS-075.06
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 075.06 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 16, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-075.06

MIR:
(New frequencies implemented 1 January 1997:
Uplink 145.2 MHz FM
Downlink 145.8MHz FM)
Note, the above split is used for both packet and voice operation.

SAFEX, MIR 70cm Repeater
(Uplink 435.750MHz FM, Downlink 437.950MHz FM,
Subaudible tone 141.3 Hz)
The repeater operational and active..

RS-10:
(Uplink 145.865-145.905MHz CW/SSB, Downlink 29.36-29.4MHz CW/SSB)
RS-10 has strong downlink signals.
[ANS thanks Mark Herrick, KL0AD, for this report.]

RS-12:
(Uplink 21.21-21.25MHz CW/SSB, Downlink 29.41-29.45MHz or
145.91-145.95Mhz CW/SSB)
The sat continues to provide excellent downlink signals in both T-
and K-mode.
[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898MHz CW/SSB, Downlink 29.354-29.394MHz CW/SSB)
RS-15 was a little weak on the downlink and the satellite spin puts a twist
in, but you can time the important exchanges around that "null".

[ANS thanks Mark Herrick, KL0AD, for this report.]

Be aware that RS-15 has battery charging problems. When the satellite is
in the dark it has low output power..
[ANS thanks Geoff Perry for this report.]
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
RS-16's 70 cm, 435.504 Mhz beacon on RS-16 operational. The 10 meter beacon
is not active at this time. Transponder is not operational.
RS-16
1 24744U 97010A 97066.14889668 .00002139 00000-0 74153-4 0 367

FO-20
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Operating normally. Strong downlink signal.

KO-23
(Uplink 145.85, 145.9MHz FM, Downlink 435.175MHz FM,
9600 Baud FSK.)
KO-23 operating normally.

KO-25:
(Uplink 145.87MHz FM, Downlink 436.5MHz FM,
9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27:
(Uplink 145.85MHz FM, Downlink 436.8MHz FM)
Operating normally and lots of activity heard over
North America and Europe.
As of NOV 2, the AO-27 schedule is as follows:
TEPR 4 = 16 = 8 Minutes in Length
TEPR 5 = 52 = 18 Minutes in Length

TX-3 is on Mid Power during TEPR 5.

This will have the TX turn on 8 Minutes after the satellite
enters the sun for a duration of 18 Minutes. This is a "back to US
Latitudes"operation.

N4USI, AO-27's current Command Station sends his thanks all for
their messages about the satellite turning on later than expected. He
reports he's deliberately letting the "turn on" time drift later
(for about 4-5 Minutes) so stations in the southern latitudes can also
have a chance to work AO-27. Every few months he will be letting the
turn on time drift like this to give more stations a chance to make
contacts thru the satellite.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, and Miguel A.

Menendez, EA1BCU, for this update.]

FO-29
Voice/CW
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Digital
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600
baud BPSK)
FO-29 is in Analog mode at the current time.
The latest FO-29 Schedule can be found at.

[ANS thanks Ken Ernandes, N2WWD, for the updated keps.]

OSCAR-11
(Downlink 145.825MHz. FM, 1200 Baud PSK)
.The last month (14 January - 17 February) has been uneventful for
OSCAR-11. Good, steady signals have been received from the 145.826
MHz. beacon. Mirek, OK2AOK reports hearing the mode-S beacon on
January 25th. The signals peaked at S6 on a pass when the maximum
elevation was 21 degrees.
[ANS thanks Clive Wallis, G3CWV, and Richard W L Limebear, G3RWL,
for this information.]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86MHz FM, Downlink 437.0513MHz SSB,
1200 Baud PSK.)

PACSAT (AO-16)
It is working normally in its orbits on Europe.
1200 bps Manchester FSK modulation used on Uplinks.
1200 bps RC-BPSK-TX modulation used on Downlink. (+/- 10 KHz Doppler
correction). Graphic information about WOD/Telemetry values can find it in:
http://www.arrakis.es/~ea1bcu/ao16.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

DO-17(DOVE)
(Downlink 145.825MHz FM, 1200 Baud AFSK.)
No changes reported during last few weeks

WEBERSAT (WO-18)
(Downlink 437.104MHz SSB, 1200 Baud PSK AX.25.)
Webersat (WO-18) is currently in MBL mode after last weeks system
crash. The satellite appears to be in good condition broadcasting
MBL telemetry.

Subject: IRCI filters WWW..site ANYONE ???? HELP

Dear friends

I am looking for the IRCI filters web site so I can order some filters
for my transceiver.(Any other manufacturer will be wellcome too).

If there is no www... site a fax number will be good enough too.
Any other suggestions will be accepted.

Thank you in advance

Howdy Pirens:
You can get TLE's from these sites, and while you are at the RPV site,
download STS PLUS. You can track 32 sat's with this program, and it will
correct for dopler shift.

greetings
I am from canada, but i suspect the information, you are looking for,
could come from anyone.
packet radio is something like the internet, however there are two
disctinct comparisons/differences. the internet is fast and more
efficient but packet radio is wireless.
With packet radio you need a tnc. you can probably get lots of
information if you type tnc or packet radio on your
internet search engine.
For packet you will need your computer, thats obvious, a tnc and a two
meter radio.
tncs generally cost around $150 to $450, again i am canadian and our
prices tend to be higher.
The general frequencies used tend to be around the 145 mhz, plus or
minus .1 mhz, area.
In terms of international boating, you might consider investingating
the use of the amateur digital, packet, satellites which are up.
Again, use you search engine and look for amsat and see what
they have to say about packet and amateur satellites.
With just about any mode/band of amateur radio, you can find lots of
information and activity just by doing research, looking around. I,
as i am sure you have found, the internet offers scads of information
on just about any topic, someone has already inputted into the system.

Subject: What are the frequencies used in radio astronomy?

greetings
I realise that this is not an amateur radio related question. I did
ask this question in a more appropriate usenet group title but i got
no information back.
Does anyone know what frequencies are currently being used to look at

the cosmos and what frequencies the ufo research groups are using to
look for signs of intelligent life. p.s. i have not jumped off the
deep end.

You'd probably best look at www.nfra.nl, they/ve got a quite extensive site.

Sure not! If you plan to install a preamp, most probably you will get a lot of noise, because your area it seems to be a lot of "radioelectric polution".

I would try a specific bandpass filter between your antenna and receiver. BTW, which scanner receiver do you use? I'm having quite well results with an Icom IC-R100 at 180kHz bandwith. (I'm looking a smaller IF filter, but not found yet).

Date: 18 Mar 1997 00:28:32 GMT
From: tkelso@afit.af.mil (TS Kelso)
Subject: NORAD Two-Line Orbital Element Sets (TLE962)

The most current orbital elements from the NORAD two-line element sets are
carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are
also available on this system.

Element sets (also updated daily) and some documentation and software are
available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the
directory pub/space.

As a service to the satellite user community, the most current of these
elements are uploaded weekly to sci.space.news and rec.radio.amateur.space.
This week's elements are provided below.

From: n4zo@sccoast.net
Subject: What`s up with rs-15?

What does it take to get anything going on that bird? Unless the pass is almost directly overhead, no luck here. Occasionally there is a sig to be heard, but never anything as loud as the .4 w beacon. the max for the beacon is 1.2 w, and it is loud and clear. What does it take to hit it consistently? I know it takes more than 100w and ten elements.

Gus, N4ZO

You will not hear Meteor sats after dark because they only transmit in the visible light channel..there is no nfra red capability..no sunlight, no signal..

Sorry for the (spam) Mail

Do you think if I knew it was wrong I would have given
you my Email address and snail-mail address. I'm so stupid
I didn't even know I'm stupid. This is my first time on the net and
when the mail came in I just did what it said. So much for
the blind leading the blind, case in point
All I can say is send me the posting address and I will pull
It and then Target others (spammers).Like you do. I'm SORRY.

KEVIN

964. ! New HighTech CD-ROM released for 97 !

AmSoft announces the 1997 release of "The World of Ham Radio
CD-ROM.
The World of Ham Radio contains the World's largest collection
of amateur radio software, and the most recent FCC amateur radio
license database available anywhere. Track all US and Foreign
Licensees authorized to operate by the FCC. More than 1,000,00
callsigns are found in seconds with this CD-ROM. The current
database includes calls issued up to 14 January 1997. Find hams
by full or partial call sign, prior call sign, last name, first
name, State, City or zip codes. Create your mailing lists or just
print single labels from this FCC Callsign database program.
DOS, Windows 3.x, and *Windows 95 compatible lookups on this
CD-ROM.
Every issue comes with the AmCall auto-logging station logbook
which uses this callsign database. Compatible with most other
amateur radio software packages available today. Also includes
all the "Vanity Flood Gate assignments, plus the missing 3,500
"Vanity Assignment still Available" calls.

There are over 2150 amateur radio modification files included on
this CD-ROM logically arranged by manufacturer, and model number.
That's over 800 new mods since our last issue.

This CD-ROM is non invasive to your drives, this means no hard
drive usage unless you decide to use it.

A Complete user interface "CDVIEW" for the Ham Radio Software
library eliminates the need for you to use DOS commands and
hard drive space. CDVIEW includes Instant online help and
program documentation by pressing the (I) key on your keyboard.
CDVIEW will make it very easy for you to move through and
operate
the massive 20,000+ file compilation. These files could easily fill
822+ Megabytes of space if they were not on this convenient

CD-ROM.
Users can preview new ham software directly on the CD-ROM
without
requiring a hard drive, many of the software programs run directly
from the CD-ROM. You can use the CD-ROM to place files onto
removable diskettes, or to install files onto your computer.

For more information visit: http://hamster.ivey.uwo.ca/~amsoft/
or contact AmSoft direct from the information at the top of this
notice.

967. Linux and KANSAS CITY Rotor Interface with Sattrack

Newsgroup: rec.radio.amateur.space
Date: 1997-03-19 00:00:00 UTC
From: pf@misg.csd.harris.com
Message-ID: <5go0mk$3p6@hawk-hcsc.hcsc.com>
Source record: 19422

Dear OM's ,

I'm running Sattrack V3.1 under Linux on my PC to track ham's satellites .
I just purchased a KANSAS CITY interface , and I'm looking for the C code
to be included into satctrl.c & sattrack.h to make this KCT interface
running .

Can somebody help me ?
I'm convinced that somebody else should be interested in this support .
I've contacted Manfred the author of SATTRACK and he has no idea who has
written this code , but I'm sure he would be pleased to include it in his
next update .

If you have an idea on the subject I would appreciate you send me an
email . As I'm not an expert in programming it would be difficult for
me to write this code by myself ....

Many thanks in advance .

Best regards .

Pierre-Francois

968. Link budget

Newsgroup: rec.radio.amateur.space
Date: 1997-03-19 00:00:00 UTC
From: Jordi Soriano Goma <jsoriano@voltor.upc.es>
Message-ID: <33302B7D.1E51@voltor.upc.es>
Source record: 19423

Hello

I have problems with a link budget.

I don't understand if the power of the transponders refers to all the band (p.e. 250 Khz) and It's divided between all the users or if the output power refers only to each channel (p.e. 15 Khz).

Thank you.

73. Jordi.

971. Microwave links (Help needed)

Newsgroup: rec.radio.amateur.space
Date: 1997-03-19 00:00:00 UTC
From: winston@cyber-wizard.com
Message-ID: <5gnf3c$l11@informer1.cis.McMaster.CA>
Source record: 19521

Hi there,
I am a final year student in EE. I am working on microwave links at 38.7GHz for my thesis. The antennas system that we use are built by Harris. It is called the "Microstar".
I would like to know more about the advantages and disadvantages when connecting at such a high frequency in telecommunication.
I am also studying the attenuation and effect of such frequency when it propagates through various type of glass,vegetation and weather.
I am trying to use some formulas in order for me to verify my experimental result with the theoretical result. However, I am not sure about which formulas in optics or microwave that I can use.
If anyone of you have more to say about this, please send an email to winston@cyber-wizard.com . Any other information would be greatly appreciated.

BTW, I hope I am posting up in the right newsgroup. If not, I would like to apologize and please suggest the right group for me. Thanks.

** I have limited excess to newsgroup, so please replying by sending an email to me.

Thanks you for your attention.

Winston

972. Icom-970 problem!!

Newsgroup: rec.radio.amateur.space
Date: 1997-03-20 00:00:00 UTC
From: Javier <ea4cmv@cot.es>
Message-ID: <33307F68.3D09@cot.es>
Source record: 19426

Hi all, I have an Icom-970 and sometimes it becomes completly deaf in 70 cms. band and with the general coverage module occurs the same. At the same time the display show three dashes in the place of every digit.
The question is if anybody who has this rig and had had this problem know how to solve it.
Thank you 73's Javier EA4CMV.

974. My First MIR Packet Contact! <<<<< : >>>>>

Newsgroup: rec.radio.amateur.space
Date: 1997-03-20 00:00:00 UTC
From: Mike Cat <JoeQPublic@someaddress.net>
Message-ID: <33314D2F.7C50@someaddress.net>
Source record: 19428

Hello all,

Well, I've have my ticket only since December '96 and I finally got
around to getting some equipment that is suitable for working MIR (and
the Shuttle) on 2 meter packet. So, last night (or today UTC), I made
my first contact (YES! FINALLY!):

First MIR Contact on Packet Radio
Time 07:50 UTC Thursday 20 MAR 1997 (it was a 72 degree pass)

Home station setup:

ICOM HT T7A
TNC: Kantronics KAM Plus
Computer: Gateway 2000 P5-100
Software: Used STSPlus version 9650 and Hyperterminal under Win95
Xmit: 145.200 (no compensation for Doppler
Rcv: 145.800 lots of QRM from APRS on 145.790)
Power out: 60 Watts (using rfconcepts amp)
Antenna: M-Squared Eggbeater in the attic (3rd floor of house) with
optional reflector kit.

The session follows:

R0MIR>KB2WVO-7/V:HELLO FROM MIR CREW

c R0MIR-1
cmd:*** R0MIR-1 busy
*** DISCONNECTED
R0MIR>KB2WVO-7/V:HELLO FROM MIR CREW

c R0MIR-1
cmd:*** R0MIR-1 busy
*** DISCONNECTED
R0MIR-1>WF1F/V:CMD(B/H/J/K/KM/L/M/R/S/SR/V/?)>

R0MIR-1>WF1F/V: - Logged off

cmd:c R0MIR-1
cmd:*** CONNECTED to R0MIR-1
Logged on to R0MIR's Personal Message System
CMD(B/H/J/K/KM/L/M/R/S/SR/V/?)>
l
b

Msg # Stat Date Time To From @ BBS Subject
75 P 03/18/97 05:32 R0MIR WF1F for jerry
74 P 03/18/97 01:01 ROMIR IW3RCR

*** retry count exceeded
*** DISCONNECTED
cmd:

As you can see, it was a VERY SHORT session. Timing is everything as we all are aware, and the PMS/BBS on MIR only allows one connection at a time. By the time WF1F logged off, there was only about a minute left before LOS, plus there was ALOT (as usual) interference from 145.790 APRS stations close by, so many AX.25 packets were wiped out on receive from MIR. I can't wait until they change those MIR packet freq's again (hopefully to a MUCH better location)!

Does anyone know what version/sort of PMS MIR is running? I would like to get a list of help for it BEFORE I make contact the next time so I'll know what I'm doing.

More postings to come in the future.
Thanks and have a great day!

975. Feed Horn for 5ft dish

Newsgroup: rec.radio.amateur.space
Date: 1997-03-20 00:00:00 UTC
From: seven@datasync.com
Message-ID: <5gsaic$ird@osh2.datasync.com>
Source record: 19429

I just came across two 5ft dishes that I want to use for my 70cm work.
Can someone describe the feedhorn for me.
I read up some in the ARRL antenna book and the waveguide they suggest
would be REALLY BIG.
Is there another way?

>>From: Nick Dunn <ndunn@gibson.com>
>>Subject: Virus Warning
>>
>>Please distribute as widely as possible:
>>
>> There is a computer virus that is being sent across the
>Internet. If you receive an email message with the subject line "Deeyenda",
>>DO NOT read the message, DELETE it immediately. Please read the
>messages below.
>> Some miscreant is sending email under the title "Deeyenda"
>>nationwide, if you get anything like this DON'T DOWNLOAD THE FILE! It has a
virus that rewrites your hard drive, obliterating anything on it.
>>Please be careful and forward this mail to anyone you care about.
>>
>> FCC WARNING !!!!! ----- DEEYENDA PLAGUES INTERNET ----
>>
>> The internet community has again been plagued by another
>computer virus. This message is being spread throughout the internet,
including USENET posting, EMAIL, and other interent activities..
>>The reason for all the attention is because of the nature of this virus and
the
potential security risks it makes.
Instead of a destructive trojan virus (most viruses!), this virus,
referred to as Deeyenda Maddick, performs a comprehensive search on your
computer, looking for valuable information, such as email and login
passwords, credit cards, personal info, etc. The Deeyenda virus also has
the capability to stay memory resident while running a host of applications
and operation systems, such as Windows 3.11 and Windows 95.
>>
What this means to internet users is that when a login and PASSWORD are sent
to the server, this virus can COPY this information and SEND IT OUT TO AN
UNKNOWN ADDRESS (varies).
>>
The reason for this warning is because the Deeyenda virus is virtually
undetectable. Once attacked, your computer will be unsecure. Although
it can attack any O/S, this virus is most likely to attack those users
viewing Java enhanced Web Pages (Netscape 2.0+ and Microsoft Internet
Explorer 3.0+ which are running on Windows 95) . Researchers at Princeton
University have found this virus on a number of World Wide Web pages
and fear it s spread.
>>
Please pass this on, for we must alert the general public of the security
risks.
>>

978. Re: Phase 3-D???

Newsgroup: rec.radio.amateur.space
Date: 1997-03-21 00:00:00 UTC
From: Chris McKendry <kh2pm@kuentos.guam.net>
Message-ID: <33314E3B.2ED1@kuentos.guam.net>
Source record: 19432

Jim,

For starters, I am new to the newsgroups, so if anyone sees me doing
something wrong, bear with me.

Do you get QST (Official Journal of the ARRL)?
I am looking at a very informative article in the
January 1997 issue, pages 28-31. Seems as if all the answers to your
questions are probably here, if not easily obtained with a simple
search of the internet. I am anxious to start using the Phase 3D sat
myself!!
In a nutshell, the QST article states that the controlling groups will
be those with the largest financial contribution to the construction of
the satellite. This board will design the "schedule" of the sat and
is probably going to change from time to time. As of press time of the
article, there was no absolute designation as to which mode would be
"dominant" over the others. One item is for certain: you will need to
buy a SSB receiver since there will be no FM transmissions from the sat
since SSB and CW transmissions use much less power. There are mentions
of "sumultaneous SSB or CW conversations" so maybe that is a hint of
the capabilities of the sat. Also the article states that Phase 3D will
operate in 2 uplink/downlink modes simultaneously; but only once the
sat is in orbit and all tests are complete no one will know for sure
whether that will be possible. There will be updates in future issuesof
QST so check the newsstands or join ARRL and get in the mag in the mail.

Hope that was of any help.

Chris KH2PM

979. Re: Feed Horn for 5ft dish

>Can someone describe the feedhorn for me.
>.... the waveguide they suggest
>would be REALLY BIG.
>Is there another way?
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
The waveguide *would* be really big for
70cm use. A 5ft dish is not going to
yield a lot of gain at that frequency
either.
You didn't state the f/d ratio so
a description of the feed can't be
complete. A possibility would be a three
turn helix (also *very* big) if the f/d
is large (.6 or so.) The reflector would
be nearly as large as the dish and would
mask it causing considerable loss.
....Probably will end up being a 2 el beam.
A small beam would be much lighter and
could give the same gain with less problems
than the dish.

If you want to know more about Satellite Constellations, especially Teledisc
and Iridium, you have to see

http://www.ee.surrey.ac.uk/Personal/L.Wood/constellations/

This is an excellent page.

As far as I know it always revers to the total downlink power, so you have
to divide by the number of users. Ussually the beacons are stronger than
the users ever get, so you can use the beacon power for the calcultation
and take a bit extra.

Take a look at this month's CQ VHF. It has an entire article about MIR
PBS, including do's/don't's, and the help screen. BTW, you're asked to
NOT get the help screen, as I assume it takes too long to send it.

CQ VHF is only $2.95 in the states.

Subject: Feed Horn for 5ft dish

I just came across two 5ft dishes that I want to use for my 70cm work.
Can someone describe the feedhorn for me.
I read up some in the ARRL antenna book and the waveguide they suggest
would be REALLY BIG.
Is there another way?

Date: Thu, 20 Mar 1997 09:43:59 -0500
From: Mike Cat <JoeQPublic@someaddress.net>
Subject: My First MIR Packet Contact! <<<<< : >>>>>

Hello all,

Well, I've have my ticket only since December '96 and I finally got
around to getting some equipment that is suitable for working MIR (and
the Shuttle) on 2 meter packet. So, last night (or today UTC), I made
my first contact (YES! FINALLY!):

First MIR Contact on Packet Radio
Time 07:50 UTC Thursday 20 MAR 1997 (it was a 72 degree pass)

Home station setup:

ICOM HT T7A
TNC: Kantronics KAM Plus
Computer: Gateway 2000 P5-100

Software: Used STSPlus version 9650 and Hyperterminal under Win95
Xmit: 145.200 (no compensation for Doppler
Rcv: 145.800 lots of QRM from APRS on 145.790)
Power out: 60 Watts (using rfconcepts amp)
Antenna: M-Squared Eggbeater in the attic (3rd floor of house) with
optional reflector kit.

The session follows:

R0MIR>KB2WVO-7/V:HELLO FROM MIR CREW

c R0MIR-1
cmd:*** R0MIR-1 busy
*** DISCONNECTED
R0MIR>KB2WVO-7/V:HELLO FROM MIR CREW

c R0MIR-1
cmd:*** R0MIR-1 busy
*** DISCONNECTED
R0MIR-1>WF1F/V:CMD(B/H/J/K/KM/L/M/R/S/SR/V/?)>

R0MIR-1>WF1F/V: - Logged off

cmd:c R0MIR-1
cmd:*** CONNECTED to R0MIR-1
Logged on to R0MIR's Personal Message System
CMD(B/H/J/K/KM/L/M/R/S/SR/V/?)>
l
b

Msg # Stat Date Time To From @ BBS Subject
75 P 03/18/97 05:32 R0MIR WF1F for jerry
74 P 03/18/97 01:01 ROMIR IW3RCR
*** retry count exceeded
*** DISCONNECTED
cmd:

As you can see, it was a VERY SHORT session. Timing is everything as we
all are aware, and the PMS/BBS on MIR only allows one connection at a
time. By the time WF1F logged off, there was only about a minute left
before LOS, plus there was ALOT (as usual) interference from 145.790
APRS stations close by, so many AX.25 packets were wiped out on receive
from MIR. I can't wait until they change those MIR packet freq's again
(hopefully to a MUCH better location)!

Does anyone know what version/sort of PMS MIR is running? I would like
to get a list of help for it BEFORE I make contact the next time so I'll
know what I'm doing.

More postings to come in the future.
Thanks and have a great day!

From: Chris McKendry <kh2pm@kuentos.guam.net>
Subject: Phase 3-D???

Jim,

For starters, I am new to the newsgroups, so if anyone sees me doing
something wrong, bear with me.

Do you get QST (Official Journal of the ARRL)?
I am looking at a very informative article in the
January 1997 issue, pages 28-31. Seems as if all the answers to your
questions are probably here, if not easily obtained with a simple
search of the internet. I am anxious to start using the Phase 3D sat
myself!!
In a nutshell, the QST article states that the controlling groups will
be those with the largest financial contribution to the construction of
the satellite. This board will design the "schedule" of the sat and
is probably going to change from time to time. As of press time of the
article, there was no absolute designation as to which mode would be
"dominant" over the others. One item is for certain: you will need to
buy a SSB receiver since there will be no FM transmissions from the sat
since SSB and CW transmissions use much less power. There are mentions
of "sumultaneous SSB or CW conversations" so maybe that is a hint of
the capabilities of the sat. Also the article states that Phase 3D will
operate in 2 uplink/downlink modes simultaneously; but only once the
sat is in orbit and all tests are complete no one will know for sure
whether that will be possible. There will be updates in future issuesof
QST so check the newsstands or join ARRL and get in the mag in the mail.

Hope that was of any help.

Chris KH2PM

> mask it causing considerable loss.

The typical reflector size is 0.75 wavelengths
in diameter. Since a 5 ft dish is 2.2 wavelengths
at 435 MHz, the blockage is 11.5%. By comparision,
a really popular 90 mm optical telescope has a
blockage of 9%.

However, in the April 1995 IEEE Antennas and Propagation
Magazine, p.45 Dr. Kraus described a helical-beam with a
pair of loops instead of the ground plane.

Has anyone done much research on the topic of short
backfire arrays using small parabolic reflectors?
This technique may yield the highest practical gain,
but I can't help much.--Zack Lau W1VT

To all radio amateurs

SB SPACE ARL ARLS007
ARLS007 Mir fire remains ''hot'' topic during MIREX school contacts

Ham-astronaut Jerry Linenger, KC5HBR, aboard the Russian Mir space station, assured students at Booker T. Washington High School in Houston, Texas, this week that all aboard the space station are in good shape after a fire aboard Mir late last month. About three dozen students got to chat with Linenger March 17 and posed more than a dozen questions during the ten-minute contact. Linenger also discussed the effects of the fire on experiments and described the escape arrangements available to those aboard Mir.

On March 11, students at United South High School, Laredo, Texas, successfully spoke with Linenger via ham radio. Other Mir school QSOs are tentatively scheduled to happen between now and April 20, 1997.

Linenger will remain aboard Mir with Cosmonauts Vasily Tsibliev and Alexander Lazutkin until mid-May.

-----BEGIN PGP SIGNED MESSAGE-----

The dish itself is not frequency specific ... it's the feed system that
determines the frequency of operation ...

To the extent that the dish is rather large, it must have pretty good
surface accuracy in order to maintain gain ... more error from ideal
surface = greater loss of achievable gain (up to the limit due to size)

I hope I have answered some of your questions ...

Mike -

Congrats on getting through to Mir. And yeah, the interference is pretty
horendous.

Check out the following web page for the NASA Johnson Space Center
Amateur Radio Club.

http://www.phoenix.net/~mbordel/jscarc/

Go to Mir Links and you will find some *fascinating* information on Mir's
amateur radio activities, including background information, images, a
tutorial on the Mir PMS system (including the information you requested
on the packet BBS), and a whole lot more.

992. Amsat *needs* your help!

Newsgroup: rec.radio.amateur.space
Date: 1997-03-22 00:00:00 UTC
From: fiscus@mcn.net
Message-ID: <5gvi0g$18o_002@blpm02-203.mcn.net>
Source record: 19446
Cross-posted to: alt.radio.scanner,aus.radio.amsat,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.amateur.space,
rec.radio.scanner,rec.radio.swap,sci.astro.amateur,sci.space.policy

Amsat-NA is in need of donations to help complete and launch the Phase 3D satellite. Last report says we need to raise over $150,000. Launch date is only a few months away so we haven't much time. You're fooling yourselves if you believe that the money will magically appear come launch day or that someone else will donate the needed funds. I don't want to see Amsat bankrupt itself in the name of Phase 3D.

If 150 of us will call Martha at (301) 589-6062 and each donate $1,000 then we can be assured Phase 3D will be riding on the ESA rocket and not a cement weight.(cement looks good on the ground, not in space)

If 300 of us will call Martha at (301) 589-6062 and each donate $500 then we'll be able to enjoy the sounds from Phase 3D's transponders as it passes high over head.(I can almost hear it now)

If 600 of us would just call Martha at (301) 589-6062 and each donate $250 then we would have an excellent tool to use for recuiting new members into the greatest organization amateur radio has ever known: AMSAT.

If you have made a pledge to donate to the Phase 3D project and have not keep it, Martha is impatiently waiting to hear from you at (301) 589-6062.

If you have never donated to Phase 3D, you can put an end to that retched feeling of guilt in your guts by sending a donation to Martha at 850 Sligo Ave., Suite 600, Silver Spring, MD. 20910-4703

If you have never heard of Phase 3D, check out: http://www.amsat.org then call Martha at (301) 589-6062 and donate.

Did I mention that Martha likes to sign up new members too? If you're reading this and are not an Amsat member... Shame Shame Shame. Call Martha and sign up today, you'll sleep better for it.

If you live some place other than North America, send your Phase 3D donation to your local Amsat Organization(They all need project funds).

~~~/~~~\~~/~~~\~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~/~~~\~~~~
\___/ \___/ T h e I n t e r n e t T o u r B u s \___/

Se trata del incansable autobus de Patrick Crispen y Bob Rankin. En la
edicion del 6 de marzo, aparece un articulo sobre el tema de los hoax
(avisos de virus en e-mail que realmente no existen) que intentaremos
traducir medianamente para disfrute de los lectores de Lenguaje Binario.
Hemos dejado deliberadamente en ingles las citas textuales que se hacen de
los avisos de nuevos virus, pues en ese idioma es como han sido divulgados
en mayor medida. Tambien hemos dejado en ingles la palabra "hoax"
("enga~o") por cuanto consideramos que ya la misma ha pasado a formar parte
de la terminologia del correo electronico. Les instamos a que envien este
mensaje a sus relacionados para contribuir a minimizar el efecto de los
anuncios de virus falsos.

================================================================================
VIRUS EN E-MAILS

Los mayores hoaxes que transitan por la red son los mensajes que dicen que
puedes contraer un virus informatico al leer mensajes que contengan ciertos
subjects. Aqui estan algunos de los mensajes sobre virus falsos mas
populares:

Here is some important information. Beware of a file called
Goodtimes. ... If you get anything called "Good Times", DON'T
```

read it or download it. It is a virus that will erase your hard drive. Forward this to all your friends. It may help them a lot.

o

There is a computer virus that is being sent across the Internet. If you receive an e-mail message with the subject line "Irina", DO NOT read the message. DELETE it immediately.

o

There is a computer virus that is being sent across the Internet. If you receive an email message with the subject line "Deeyenda", DO NOT read the message, DELETE it immediately!

o

This is a warning for all internet users - there is a dangerous virus propagating across the internet through an e-mail message entitled "PENPAL GREETINGS!". DO NOT DOWNLOAD ANY MESSAGE ENTITLED "PENPAL GREETINGS!" This message appears to be a friendly letter asking you if you are interested in a penpal, but by the time you read this letter, it is too late. The "trojan horse" virus will have already infected the boot sector of your hard drive, destroying all of the data present. It is a self-replicating virus, and once the message is read, it will AUTOMATICALLY forward itself to anyone who's e-mail address is present in YOUR mailbox!

[Las citas textuales provienen de http://ciac.llnl.gov/ciac/CIACHoaxes.html]

Algunos de estos mensajes de alerta sobre virus incluyen un aviso de emergencia proveniente de la Comision Federal de Comunicaciones de Estados Unidos --la FCC (la recuerdan?).

Amigos, es absolutamente IMPOSIBLE que puedan contraer un virus al leer el texto de un e-mail. No se puede. Punto final. No me importa lo que cualquiera pudiera decir. Es IMPOSIBLE! Los mensajes que te previenen acerca de "Good Times", "Irina", "Deeyenda", "Penpal Greetings" y cualquier otro virus por e-mail son HOAXES!

Ah! Y respecto a los mensajes de advertencia de la FCC, la politica de este organismo es:

La FCC no disemina informacion advirtiendo de la existencia, impacto o formas en que afectan los virus informaticos.

[Cita textual de http://www.fcc.gov/Bureaus/Miscellaneous/Public_Notices/pnmc5036.txt]

Dicho esto, dejenme informarles que *ES* posible que contraigan un virus informatico de un archivo que haya sido *anexo* a un e-mail, pero para ello tendrian que ejecutar antes ese archivo. Por ejemplo, supongan que alguien les envia un mensaje de correo electronico con un archivo de Microsoft Word

infectado con un virus, anexo al mensaje. Vuestras computadoras NO podrian ser infectadas con el virus si abren y leen el mensaje (recuerden, es IMPOSIBLE que contraigan virus desde mensajes de correo electronico). Vuestras computadoras *si podrian*, sin embargo, ser infectadas al ustedes abrir el documento de Word infectado.

Deberian ustedes preocuparse por la posibilidad de recibir archivos infectados, anexos a un mensaje de correo electronico que les envien? Si y no. De acuerdo a un articulo publicado hace poco en la lista de correo Macintosh Evangelist, hay actualmente:

- De 10.000 a 11.000 virus de DOS
- 12 virus de Windows
- 35 virus de Mac
- 200 o mas virus de macros; de entre los cuales el 70 o el 90% son multiplataforma
- 6 virus de Unix

Esos 10.000 u 11.000 virus de DOS afectan a toda maquina que corra DOS, Windows y Windows '95 (pero no a las Mac), y muchos de los 200 o mas virus de macros afectan a todas las maquinas (PC y Mac). A proposito, las macros son series de comandos (normalmente comandos de Microsoft Word) que permiten agrupar varias tareas en un solo comando.

En el TourBus hemos hablado de esto un par de veces antes, pero, como pueden ustedes cuidarse de contraer un virus informatico al bajar archivos de Internet? La respuesta es: NUNCA abran un archivo sin antes haberlo revisado con un antivirus. Inclusive si el archivo les ha sido enviado por su jefe, su pareja o algun miembro de su iglesia, REVISEN EL ARCHIVO ANTES DE ABRIRLO.

Para terminar: como pueden protegerse de los virus "Good Times", "Irina", "Deeyenda" y "Penpal Greetings"? NO TIENEN QUE HACERLO! ELLOS SON HOAXES, NO EXISTEN!

Algunas direcciones para saber mas de este tema:

http://ciac.llnl.gov/ciac/CIACHoaxes.html

Debo recordarles a todo que los virus son filas ejecutables realizadas a
partir de un lenguaje (C, VB, etc). Es imposible que un mensaje electronico
sea algo ejecutable ya que en general es texto o html.
Si posee un fila (es decir es un mensaje MIME) la fila ejecutable es el
virus.
Por otro lado los virus no pueden superar las barreras de las arquitecturas.
Word 97 no corre en Macintosh... Por que un virus puede hacerlo?
Tratando de que no se pongan paranoicos

996. RS16

Newsgroup: rec.radio.amateur.space
Date: 1997-03-22 00:00:00 UTC
From: Fred N Benardella <WA2HFI@ix.netcom.com>
Message-ID: <5h0nnh$31o@dfw-ixnews4.ix.netcom.com>
Source record: 19450

I've listened for RS16 on 29.408 and still have yet to hear it (the beacon). Or should I be listening on 29.451? Also have not tried the 435.504 or 435.548 frequencies should I be listening there? Is the 2 to 10 working? Any info appreciated.
Thank you, Fred WA2HFI EN34is (MN)

997. Re: DSP-2232

Newsgroup: rec.radio.amateur.space
Date: 1997-03-22 00:00:00 UTC
From: "Bob Houghton (KC6LVG)" <houghton@cyberg8t.com>
Message-ID: <333402FC.332F@cyberg8t.com>
Source record: 19451

Dear Melvin,

I am using a DSP-1232 that's about 3 years old (it's at work so I can't tell you the ROM version number) and it was one of the first units that had the STEP, STEPSIZE, STEPLEN and other doppler control functions working. This function toggles the mic up/dowm lines and *only* works with the psk modem (modem 13). If your unit was manufactured in December 1993 or after, I believe that I will have this feature. If you want to know my rom version, I can check next Thursday when I return to work.

BTW, I too, just bought an Icom 821H and I like it very much so far. I am trying to get set up on the 9600 baud birds using a Kantronics 9612 TNC and eggbeater antennas. I'm reluctant to put crossed yagis on top of my house but so far I'm quite dissapointed with the amount of data I'm receiving on each pass. (I'm usind a Landwher preamp on the receive side.)

Good luck,

Bob Houghton KC6LVG

998. HELP WITH TRAKBOX

Newsgroup: rec.radio.amateur.space
Date: 1997-03-22 00:00:00 UTC
From: nieman@ix.netcom.com
Message-ID: <5h126i$89h@dfw-ixnews4.ix.netcom.com>
Source record: 19452

I just purchased a trakbox fron another ham and I am having trouble loading the elements. I am using telix software and it doesn't seem to work. When I start to upload elements file it reads the first couple of lines then locks up. Is there a better software or please give me some setup help for this software. Thanks in advance. Fred KC6VLL.

I've heard the beacon loud and clear on 29.408 on numerous occasions.
Are you listening at the right times for the satellite's pass?

Radioamateurs in Apeldoorn

Welkom op de site van radioamateurs in Apeldoorn. Nieuw is het geluid wat te horen is aan het einde
van deze pagina. Laat eens horen wat jullie er van vinden. En vooral in welke mode er een test gemaakt wordt.
Ook het VHF nieuws is weer aangepast, met het laatste VHF nieuws en tevens
informatie over meteorenscatter en contesten en bakens. Kijk vooral naar de bakenlijst
die aangepast is aan het nieuwe band plan op tweemeter. Daar zijn de nieuwe frequenties te vinden van,
niet alleen de Nederlandse bakens, maar ook van die in het buitenland staan opgesteld. Ook de
site van de Veron afdeling Apeldoorn is update gemaakt. Met daarin activiteiten als vossenjachten,
lezingen, bestuursmededelingen, repeaters en het nieuws uit de uitzendingen van PI4APD. En tevens
zijn daar een aantal fotoboeken te vinden oa de velddag en de verkoping.

De lijst van Radio activiteiten in Apeldoorn

Veron afdeling 05 Apeldoorn

VHF nieuws

Dit is Jos PA3GXM

Dit is Adriaan PE1KHP

Dit is jamboree on the air in Apeldoorn

Digitale stad Apeldoorn

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

Digital Scope.FAQ Main Menu
(in order of appearance)

* WELCOME! This FAQ Welcomes YOU
* DSO INDUSTRY TRENDS Whats happening in DSO technology this year?
* DSO FUNDAMENTALS - A TUTORIAL and Keywords List - What are the current
buzzwords?
* DSO FORM FACTORS What types of DSOs are there?
* PRIMARY DSO FUNCTIONS What can DSOs actually do?
* COMMON MISTAKES How can I really mess it up with a DSO?
* COMPARISONS How can I best compare various models?
* DSO APPLICATIONS What are the most common DSO applications?
* ADCs What speed do I really need on each channel?
* BANDWIDTH & TRIGGER What numbers & functions are right?
* ARCHIVAL & MEMORY How fast, how deep, & can I get more?
* DISPLAYS What am I really looking at?
* MEASUREMENTS How much is my signal changing over time?
* DIGITAL SIGNAL PROCESSING How can I obtain more useful data?
* DEMOS & PURCHASING How can I see & get the DSO I really need?

Subject: HELP WITH TRAKBOX

I just purchased a trakbox fron another ham and I am having trouble
loading the elements. I am using telix software and it doesn't seem to
work. When I start to upload elements file it reads the first couple of
lines then locks up. Is there a better software or please give me some
setup help for this software. Thanks in advance. Fred KC6VLL.

As far as I know it always revers to the total downlink power, so you have
to divide by the number of users. Ussually the beacons are stronger than
the users ever get, so you can use the beacon power for the calcultation
and take a bit extra.

Subject: Mir QSO's in Europe ?

This is a multi-part message in MIME format.

Hi,

Have the crew made some QSO's to Europe stations on VHF last days ??

Radioamateurs in Apeldoorn

Welkom op de site van radioamateurs in Apeldoorn. Nieuw is het geluid wat te horen is aan het einde
van deze pagina. Laat eens horen wat jullie er van vinden. En vooral in welke mode er een test gemaakt wordt.
Ook het VHF nieuws is weer aangepast, met het laatste VHF nieuws en tevens
informatie over meteorenscatter en contesten en bakens. Kijk vooral naar de bakenlijst
die aangepast is aan het nieuwe band plan op tweemeter. Daar zijn de nieuwe frequenties te vinden van,
niet alleen de Nederlandse bakens, maar ook van die in het buitenland staan opgesteld. Ook de
site van de Veron afdeling Apeldoorn is update gemaakt. Met daarin activiteiten als vossenjachten,
lezingen, bestuursmededelingen, repeaters en het nieuws uit de uitzendingen van PI4APD. En tevens
zijn daar een aantal fotoboeken te vinden oa de velddag en de verkoping.

De lijst van Radio activiteiten in Apeldoorn

Veron afdeling 05 Apeldoorn

VHF nieuws

Dit is Jos PA3GXM

Dit is Adriaan PE1KHP

Dit is jamboree on the air in Apeldoorn

Digitale stad Apeldoorn

Meer Radioamateur links in de wereld

Elke reactie is welkom, dit alleen nog per email. Ook foto's zijn erg welkom in jpg formaat.
Dit voor andere achtergronden of als versiering van deze pagina's.
Vooral van bijzondere stations zoek ik nog foto's, zoals omzetters-, baken-, contest staions.

Cuagn Adriaan.

Mike -

Congrats on getting through to Mir. And yeah, the interference is pretty horendous.

Check out the following web page for the NASA Johnson Space Center Amateur Radio Club.

http://www.phoenix.net/~mbordel/jscarc/

Go to Mir Links and you will find some *fascinating* information on Mir's amateur radio activities, including background information, images, a tutorial on the Mir PMS system (including the information you requested on the packet BBS), and a whole lot more.

>Thank you, Fred WA2HFI EN34is (MN)

I've heard the beacon loud and clear on 29.408 on numerous occasions.
Are you listening at the right times for the satellite's pass?

Fred,

Same here, but I did hear it on 435.504. A week ago, it *was* transmitting
on 29.408.

SB SPACE ARL ARLS007
ARLS007 Mir fire remains ''hot'' topic during MIREX school contacts

Ham-astronaut Jerry Linenger, KC5HBR, aboard the Russian Mir space
station, assured students at Booker T. Washington High School in
Houston, Texas, this week that all aboard the space station are in
good shape after a fire aboard Mir late last month. About three dozen
students got to chat with Linenger March 17 and posed more than a
dozen questions during the ten-minute contact. Linenger also
discussed the effects of the fire on experiments and described the
escape arrangements available to those aboard Mir.

On March 11, students

<snip>
Ken,
These are the only active wxsats (the Russian Meteors are currently
turned off.) The other Russian sats, OKEAN and SICH, only transmit over
Russia. NOAA K (NOAA-15) is due for launch later this year. METEOSAT
is a European Geostationary Sat its US equivilants are GOES 8 (East) and
GOES 9 (West), they transmit on 1.691 Ghz. You'll need some special
equipment to receive them (i.e. dish or loop yagi, downconverter, etc).

Regards,
Rolf

<<< Questo messaggio ♦ la parte 3 di un precedente messaggio >>>

les envia un mensaje de correo electronico con un archivo de Microsoft Word infectado con un virus, anexo al mensaje. Vuestras computadoras NO podrian ser infectadas con el virus si abren y leen el mensaje (recuerden, es IMPOSIBLE que contraigan virus desde mensajes de correo electronico). Vuestras computadoras *si podrian*, sin embargo, ser infectadas al ustedes abrir el documento de Word infectado.

Deberian ustedes preocuparse por la posibilidad de recibir archivos infectados, anexos a un mensaje de correo electronico que les envien? Si y no. De acuerdo a un articulo publicado hace poco en la lista de correo Macintosh Evangelist, hay actualmente:

- De 10.000 a 11.000 virus de DOS
- 12 virus de Windows
- 35 virus de Mac
- 200 o mas virus de macros; de entre los cuales el 70 o el 90% son multiplataforma
- 6 virus de Unix

Esos 10.000 u 11.000 virus de DOS afectan a toda maquina que corra DOS, Windows y Windows '95 (pero no a las Mac), y muchos de los 200 o mas virus de macros afectan a todas las maquinas (PC y Mac). A proposito, las macros son series de comandos (normalmente comandos de Microsoft Word) que permiten agrupar varias tareas en un solo comando.

En el TourBus hemos hablado de esto un par de veces antes, pero, como pueden ustedes cuidarse de contraer un virus informatico al bajar archivos de Internet? La respuesta es: NUNCA abran un archivo sin antes haberlo revisado con un antivirus. Inclusive si el archivo les ha sido enviado por su jefe, su pareja o algun miembro de su iglesia, REVISEN EL ARCHIVO ANTES DE ABRIRLO.

Para terminar: como pueden protegerse de los virus "Good Times", "Irina", "Deeyenda" y "Penpal Greetings"? NO TIENEN QUE HACERLO! ELLOS SON HOAXES, NO EXISTEN!

P3-D CHARGE REGULATORS ARRIVE

HR AMSAT NEWS SERVICE BULLETIN 081.01 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.01

Phase 3-D team members Josef Szabo and Andras Szimler, both from the
Amateur Radio Club Station HA5BME, accompanied Phase 3-D's flight Battery
Charge Regulators (BCRs) from Hungary to Orlando late last week and
successfully performed the all-important task of checkout and final
integration of these units into the Phase 3-D satellite.

The Battery Charge Regulators (there are three of them in the Phase 3-D
Spacecraft) are a critical part of Phase 3-D's power grid as they regulate
both the onboard power coming from the solar panels as well as the
ever-important charging functions of the main and auxiliary batteries in
the satellite.

BCR funding and construction was a joint effort between AMSAT-DL and a
Hungarian team under the leadership of Professor Dr. Andras (Bandi)
Gschwindt, HA5WH, at the Technical University of Budapest.

Stay tuned to ANS for continuing reports on the final integration progress of AMSAT's Phase 3-D International Satellite.

[ANS thanks Werner Haas, DJ5KQ, Lou McFadin, W5DID and Keith Baker, KB1SF for the information that went into this bulletin item.]

SB SAT @ AMSAT $ANS-081.04
AMATEUR SATELLITES

HR AMSAT NEWS SERVICE BULLETIN 081.04 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.04

Get ready to learn something NEW--from the EXCITING WORLD of Amateur Radio SATELLITES! Sign up for a fast-moving five-hour workshop on everything you need to get *on the birds.*

Become an expert operating through digital satellites, the *easy-sats,* low-orbit and high-altitude satellites such as AO-10, the upcoming Phase-3-D satellite, Russian satellites, and learn a bit about Russia's MIR space station and NASA's SAREX missions. you'll hear about needed equipment, and how to use FM, SSB, digital and CW modes, including dial-in access to a packet satellite without spending money for equipment, via a satellite gateway node. When you leave, you'll know:
*** Equipment Choices
(everything including pre-amps, power amps)
*** Equipment Set-up
*** Antennas, Rotators and Feedlines
*** Software for Tracking
*** Operating Protocol and Hints
*** What Information is Available for You from AMSAT and ARRL
*** Frequencies--What Countries or Regions You Can Work

WHAT: Amateur Satellites -- Today and Tomorrow
Be the Expert and start having Fun!

WHO: Ed Krome, K9EK, AMSAT expert from Columbus, IN, will be your instructor.

WHEN: Friday June 13, 2 PM - 7 PM. Arrive early to get materials.

WHERE: in association with the SeaPac Convention
Seaside Convention Center - Seaside, Oregon

HOW: Space is limited; to pre-register write or call Rosalie White, WA1STO, at ARRL HQ (Tel 860-594-0237, fax 860-594-0259) before June 4. Price is $20 for ARRL members and $25 for non-members. You'll receive free materials and 5 hours of practical information. Sponsored by ARRL and AMSAT. You can also purchase Satellite Experimenter's Handbook, from ARRL, beforehand, for $20 + $5 UPS shipping/handling.

This continuing education workshop is sponsored by AMSAT and ARRL Educational Activities Department. Those who take part all day will earn a certificate for 0.5 Continuing Education Units.

[ANS thanks Rosalie White, WA1STO, for this notice.]

SB SAT @ AMSAT $ANS-081.05
OSCAR-11 REPORT

HR AMSAT NEWS SERVICE BULLETIN 081.05 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.05

OSCAR-11 celebrated its 13th birthday on March 1st. and still going strong! Congratulations to the University of Surrey on a wonderful achievement. During the period 19-February to 18 March, good, steady signals have been received from the 145.826 MHz beacon. Good signals have also been received on 435 MHz, Saturday 15 March, 14:00 pass, when the satellite was being commanded by ground control.

Recent telemetry shows that the solar eclipses have reduced the internal temperatures by about eight degrees compared to the full sunlight condition. The battery voltage appears to be showing a tendency towards lower values, often around 13.5 volts. The spin period has varied from 300 to 382, but most of the time it is around 365 seconds.

The WOD survey of channels 1, 2, 3, 61, (magnetometers) dated 02-January-97 was transmitted until February 22nd. An ASCII file of this WOD is now on the WWW (in addition to the binary file), see below for URL. The WOD channels are now 40, 50, 52, 63, (Array voltage, battery charge, battery voltage, BCR status). This new WOD shows the effect of eclipses on the array voltage, and the battery voltage which varies from 14.0 down to 13.0 volts. The plots also show the effect of satellite spin, which modulates the current, and voltages. The BCR (battery charge regulator) switches from between unit A and unit B, several times during the WOD. A short file of this interesting WOD is also on the WWW site, and will be updated when the WOD is changed, and the maximum amount of data has been received.

Two AMSAT bulletins by Richard G3RWL have been uploaded. Topics have included OSCAR-11 status report, OSCAR-10 Keplers, and call for AMSAT-UK colloquium papers.

The operating schedule is unchanged.

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The mode-S beacon is ON, but telemetry indicates that it has
partially failed, and delivering half power. Any reports of
reception on 2401 MHz. would be most welcome. Please e-mail
g3cwv@amsat.org.

The 435.035 MHz. beacon is normally OFF. However it can sometimes be
heard when the satellite is being commanded by ground control, i.e.
within range of Guildford, UK. Likely times are between 13:00 and
18:00 UTC, Fridays or at weekends. When the 435 beacon is
transmitting, the 145 beacon is normally OFF. The data transmitted
is mainly binary. Web site for OSCAR-11 data and some software -

SB SAT @ AMSAT $ANS-081.06
10 GHz EME RECORD

HR AMSAT NEWS SERVICE BULLETIN 081.06 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.06

On Wednesday, 12 March 1997, a new world record for EME on 10 GHz
was set in a QSO between Joe DJ7FJ and Greg ZL1GSG. The two-way QSO
took place at 08.30 UTC. DF7FJ operated from Schiltach in southwestern
Germany and ZL1GSG from Awhitu Peninsula / Manukau Heads southwest of
Auckland, New Zealand. The great circle distance between the QTH's is
approximately 18340 km or just under 10000 nautical miles. DF7FJ
and his team were using a 4.5m parabolic dish and a 50W traveling
wave tube power amplifier, while ZL1GSG used a 3m dish and a similar PA.

"O" reports were exchanged both ways..

The new world record came after a series of unsuccessful attempts and
one semi-successful attempt that saw ZL1GSG using a 1.8m dish from
Muriwai, on NZ's West Coast northwest of Auckland. Prior to the successful
QSO, a test run from Awhitu Peninsula confirmed on the weekend before that
moon echoes were clearly audible from the receiver's speaker even a few
meters away from ZL1GSG's van. Earlier echoes using the 1.8m dish had
been very faint. The change to a larger dish had clearly made the
difference.

On the night of the QSO, moon echoes were received by ZL1GSG well from
about an hour before sked time. A last-minute technical problem, caused
by a short in the cable that switched the waveguide TX/RX relay, put
the whole project in jeopardy just minutes before the QSO began. However,
Greg's policy of having a spare bit of next to everything provided a
makeshift solution only a few minutes into the sked window, and contact
was established almost immediately after ZL1GSG was QRV again. The signals
from Germany were clearly audible as had been the moon echoes.

Congratulations to Greg ZL1GSG and Joe DJ7FJ from their New Zealand
ground support team of the day: Bill ZL1TTH Tim ZL3VTV Ulrich ZL1DDL
Thanks go to many amateurs who helped with the provision of equipment,
time, and a QTH.

[ANS thanks Peter, G3PHO, Editor: RSGB Microwave Newsletter
for this report.]

SB SAT @ AMSAT $ANS-081.07
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 081.07 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.07

MIR:
(New frequencies implemented 1 January 1997:
Uplink 145.2 MHz FM Downlink 145.8MHz FM)
Note, the above split is used for both packet and voice operation.

SAFEX, MIR 70cm Repeater
(Uplink 435.750MHz FM, Downlink 437.950MHz FM,
Subaudible tone 141.3 Hz)
The repeater operational and active..

RS-10:
(Uplink 145.865-145.905MHz CW/SSB, Downlink 29.36-29.4MHz CW/SSB)
Fred Andreas, ZR5FA, worked this bird most of the week using only 5W
into a 1/4 wave and maintaining coms in this configuration for almost the
entire pass. Unfortunately both RS-10 & RS-15 get very little traffic from
his neck of the woods ,which is a pity considering how easy they are to
work .
[ANS thanks Fred Andreas, ZR5FA, for this report.]

RS-12:
(Uplink 21.21-21.25MHz CW/SSB, Downlink 29.41-29.45MHz or
145.91-145.95Mhz CW/SSB)
The sat continues to provide excellent downlink signals in both T-
and K-mode.
[ANS thanks Dick Montgomery,

1017. ScoutElmer Award for you!

Newsgroup: rec.radio.amateur.space
Date: 1997-03-24 00:00:00 UTC
From: myriad1@ix.netcom
Message-ID: <myriad1-ya02348000240397100206000 1@nntp.ix.netcom.com>
Source record: 19376
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.scanner,rec.scouting.guide+girl,rec.scouting.issues

YOU DON'T NEED TO BE A SCOUT OR LEADER TO EARN THE ScoutElmer AWARD!!!
ScoutElmer Award for helping Scouts become ham ops

WHO QUALIFIES FOR THE AWARD?
1. Licensed ham op (any level)
2. Scout or Adult Leader (past or present) or...
3. Any ham that know someone (Scout or leader) currently active in a Scout unit.

WHAT IS REQUIRED FOR THE AWARD?
1. Agree to respond to Scouts via email with their questions about ham radio in your local area, for 1 month.

HOW DO I SIGN-UP FOR THE AWARD?
Email to the address below and fill in the blanks.... that's it!
1. Name & Ham Call Sign:

2. Email address:

3. Locations: (ie London, UK; Los Angeles, CA, USA; etc)

4. What do you want to do: (email only; email & phone; email, phone & ham class)

5. Your Scout affiliation & position (enter past affiliation and date if applies):
(If no current or past affiliation) Your Scout or Scout leader sponsor:

6. Optional comments for your ScoutElmer listing: (ie. ARC Club listing, Explorer post, Troop etc.)

WHAT DO I GET?
ScoutElmer Award recipients will receive special award logo graphic you can add to your website. You also get a certificate (suitable for framing). Lastly the satisfaction that you helped promote amateur radio in Scouting.

If you've already applied for the award, sorry for the email. You should receive confirmation in the next few days.
YIS

Mel Goldberg KO6TF
ASM Troop 319 & Webmaster Advisor
myriad1@ix.netcom.com
http://www.ocbsa.org/troop319/ham.htm

ScoutRadio WWW is a "good turn project" of Troop 319, Huntington Beach, California USA.

There are over 250,000 (500,000 worldwide) hams who are or have been envolved in the Scouting movement, helping their communities in times of natural disasters, emergencies and humanitarian aid. We hope you or your ARC can help local Scouts get into ham radio and keep the amateur radio service strong.

1018. Tracking software

Source record: 19378

Hi
At present, only NOAA12 and 14 are operational over North America..Meteor 3/5 was shut down as of March 20, but its just as well as it was a sick bird indeed!.

I believe that NOAA has another bird scheduled for launch this summer. Its anybodies guess what the russians will do..There are a few Meteor class birds up there, but are either shut down, or only operational over Europe.

the size of the dish determines the gain..the feed horn determines the frequency!..
generally speaking..
a 10 ft dish will give you lots of gain just about anywhere!..the higher the frequency, the more gain, and vis versa.

Jim

SB SAT @ AMSAT $ANS-081.08
WEEKLY SATELLITE REPORT PT 2

HR AMSAT NEWS SERVICE BULLETIN 081.08 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.08

AO-10:
(Uplink 435.030-435.18MHz CW/LSB, Downlink 145.975-145.825MHz
CW/USB)
AO-10
Participants in the Amsat-UK Central England VHF Net reported good results
on AO-10. Malcom G7NFO had worked some interesting "DX" including TR8CA,
PP8KWA,ZS2BWB and PY0FF.
[ANS thanks John Heath, G7HIA, Net Controller, for this report.]

OSCAR-11
(Downlink 145.825MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz..)
During the period 19-February to 18 March, good, steady
signals have been received from the 145.826 MHz. beacon. Good
signals have also been received on 435 MHz., Saturday 15 March, 14:00
pass, when the satellite was being commanded by ground control.
[ANS thanks Clive Wallis, G3CWV, for this information.]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86MHz FM, Downlink 437.0513MHz SSB,
1200 Baud PSK. Beacon 2401.1428 Mhz.)
PACSAT (AO-16)
Russ Platt WJ9F, AO-16 Command Team , reports the digipeater on AO-16 has
been on for the last couple of months. In regards to the 2.4 GHz
transmitter, it does continue to work although WJ9F has not been leaving
it on for an entire orbit due to its high current load on the 10 v bus.
The battery charging scheme on the micros is managed during sunlight
by adjusting the RCPSK transmitter power up or down to charge and
not overcharge the batteries since we have no way to turn the solar
cells off. The S-band transmitter does not have the ability to vary
its output so it is a high current draw throughout the orbit. In the
past during Experimenters Days when we have turned on the S-Band
transmitter I had to scale back the output of the RCPSK transmitter
to levels that were difficult to receive and even with these low levels
the onboard software will still turn off the S-band TX if the Battery
voltage drops too low, which it did. I guess that's why we called them
Experimenter's Days! In the future I do plan to continue to turn on the
S-band TX as power allows. I hope this answers your questions.
[ANS thanks Russ Platt WJ9F, AO-16 Command Team for this report.]

AO-16 Data/Telemetry ON-LINE

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

DO-17(DOVE)
(Downlink 145.825MHz FM, 1200 Baud AFSK.
Beacon 2401.220 MHz.)
DOVE is transmitting on 2M and on S-band 2401.220 MHz.
The command team is keeping the S-band transmitter on as a
test signal for those working on getting S receive equipment going.
The S transmitter is running about .8W to a whip that sticks out the top of
the satellite near one edge. In the northern hemisphere the whip is
pointed away from the earth, it's toward the earth in the southern
hemisphere. It is quite loud with a typical satellite S-band receive
setup, but in the northern hemisphere it will fade as much as 20 dB with
rotation of the satellite. Doppler of course is large, approximately
100 KHz during a pass.
[ANS thanks Jim white, WD0E, DO-17 Command Team, for this news.]

WEBERSAT (WO-18)
(Downlink 437.104MHz SSB, 1200 Baud PSK AX.25.)
Webersat (WO-18) is currently in MBL mode after last weeks system
crash. The satellite appears to be in good condition broadcasting

MBL telemetry.

Geoff, the last two issues of the AMSAT Journal
have had converter articles. One indicated that
a kit would be available soon and the other listed
a source for the kit. The Journal alone is worth
the membership fee. If you join, ask them for the
last two issues.

>best 10m receive antenna for _INDOORS_ for the easy sats?

I just listened in on rs-15 recently, so as far as I know it should
still be alive. One thing to consider, rs-15 has a _very_ high orbit.
This makes receiving somewhat difficult, I use a large outdoor tri-band
beam for 10,15,and 20 meters and I still have trouble getting a good
signal sometimes. Also, due to its altitude, the more popular mode is CW,

listen for that instead of voice.

Good Luck, and listen for the MTU club station, w8yy, on the birds!

Se trata del incansable autobus de Patrick Crispen y Bob Rankin. En la edicion del 6 de marzo, aparece un articulo sobre el tema de los hoax (avisos de virus en e-mail que realmente no existen) que intentaremos traducir medianamente para disfrute de los lectores de Lenguaje Binario. Hemos dejado deliberadamente en ingles las citas textuales que se hacen de los avisos de nuevos virus, pues en ese idioma es como han sido divulgados en mayor medida. Tambien hemos dejado en ingles la palabra "hoax" ("enga~o") por cuanto consideramos que ya la misma ha pasado a formar parte de la terminologia del correo electronico. Les instamos a que envien este mensaje a sus relacionados para contribuir a minimizar el efecto de los anuncios de virus falsos.

==========
VIRUS EN E-MAILS

Los mayores hoaxes que transitan por la red son los mensajes que dicen que puedes contraer un virus informatico al leer mensajes que contengan ciertos subjects. Aqui estan algunos de los mensajes sobre virus falsos mas populares:

Here is some important information. Beware of a file called Goodtimes. ... If you get anything called "Good Times", DON'T read it or download it. It is a virus that will erase your hard drive. Forward this to all your friends. It may help them a lot.

Fred,

Try slowing down the baud rate from the PC to theTB. The cpu may be
having trouble taking in the messages as fast as the PC is able to
send them. My TB would drop characters if I ran it fast. Since I am
not home (and I have the faster cpu upgrade installed) I can't
recommend a baud rate. Cut the baud rate down and try it again.

Randy

1023. Norad / US Spacecom Satellite Catalog Number

Newsgroup: rec.radio.amateur.space
Date: 1997-03-24 00:00:00 UTC
From: eagle28@ix.netcom.com
Message-ID: <3336d3f5.216184@nntp.ix.netcom.com>
Source record: 19382

Hello all,
I am a radio technician in the USMC and have been using STSPLUS
to track various satellites and have noticed some disparities in the
satellite catalog numbers from various sources. For example I have
the TLE file (964) that lists TDRS-1 as #13969, TDRS-3 as #19548, etc
and the satellite sit report from Goddard lists TDRS-1 as #13967,
TDRS-3 as #19544, etc.
Can anyone shed some light on this for me. I would greatly
appreciate any assistance provided.

Best Reguards,
Jerry

Lineage = 18Q9116 / KAVN9927 / KBMD9044

That which I post is intended to be freely shared by all.
I know their may be errors, please correct them as found.

(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Radio Sport-15 has battery chargeing problems therefore the transponder
and beacon are silent when the satellite is in darkness.

* Radio Sport-16 currently has it's Mode A transponder turned off. The
ground controlers seem to be experimenting with the various beacons,
```

therefore it is difficult to predict which will be on, 29.408 seems to be
on most passes.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely
uplinked to it with a handheld on low power. On the other hand reception
of the 70cm downlink signal is more difficult without a directional antenna
most of the time. Therefore it is important to make sure
that you can hear the satellite downlink before you transmit therefor
avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of
writing this satellite was reported to be in Analog mode.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital), at time of
writing this satellite was reported to be in Analog mode until March 21.

* STS-83 is scheduled to launch on April 3rd, 1997 at approximately
2:01 p.m. EST (1901 UTC). The launch window is 2 hours 30 minutes long.
STS-83 will include a SAREX package.

CALL SIGNS:

James D. Halsell, Commander, KC5RNI
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF

QSLs: Send reports and QSLs to ARRL EAD, STS-83 QSL, 225 Main Street,
Newington, CT 06111-1494, USA. Include the following information in your
QSL or report: STS-83, date, time in UTC, frequency and mode (FM, voice or
packet). In addition, you must also include a SASE using a large, business-
sized envelope if you wish to receive a card.

This FAQ is constantly being updated and re-released on a weekly basis on
or about Monday. Any constructive suggestions are always welcome.

> running .

Hi Pierre,

Before you will get involved with programming for an interface program
to the KCT, you should check how *accurate* is SatTrack v3.1 to track
satellites. Especially those high elliptic objects. The author has
reckoned that sattrarck is not doing a good tracking for these objects,
and I can tell you that little orbits like Mir, also fail totally.

All this problems has been solved in SatTrack v4.0.

Best,

I was using Telix to upload the kepler elements to TrakBox long time
ago, after that I moved to SatSked, and finally minicom (Linux).

There is a problem in how fast the data is sent to TrakBox. You should
check the line pace for ASCII transfers in your Telix program. A good
value for me is 100ms per line.

Geoff, the last two issues of the AMSAT Journal
have had converter articles. One indicated that
a kit would be available soon and the other listed
a source for the kit. The Journal alone is worth
the membership fee. If you join, ask them for the
last two issues.

P3-D CHARGE REGULATORS ARRIVE

HR AMSAT NEWS SERVICE BULLETIN 081.01 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.01

Phase 3-D team members Josef Szabo and Andras Szimler, both from the Amateur Radio Club Station HA5BME, accompanied Phase 3-D's flight Battery Charge Regulators (BCRs) from Hungary to Orlando late last week and successfully performed the all-important task of checkout and final integration of these units into the Phase 3-D satellite.

The Battery Charge Regulators (there are three of them in the Phase 3-D Spacecraft) are a critical part of Phase 3-D's power grid as they regulate both the onboard power coming from the solar panels as well as the ever-important charging functions of the main and auxiliary batteries in the satellite.

BCR funding and construction was a joint effort between AMSAT-DL and a Hungarian team under the leadership of Professor Dr. Andras (Bandi) Gschwindt, HA5WH, at the Technical University of Budapest.

Stay tuned to ANS for continuing reports on the final integration progress of AMSAT's Phase 3-D International Satellite.

MIR CONTACT

HR AMSAT NEWS SERVICE BULLETIN 081.03 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.03

Ham-astronaut Jerry Linenger, KC5HBR, aboard the Russian Mir space station, assured students at Booker T. Washington High School in Houston, Texas, this week that all aboard the space station are in good shape after a fire aboard Mir late last month. About three dozen students got to chat with Linenger March 17 and posed more than a dozen questions during the ten-minute contact. Linenger also discussed the effects of the fire on experiments and described the escape arrangements available to those aboard Mir.

On March 11, students at United South High School, Laredo, Texas, successfully spoke with Linenger via ham radio. Other Mir school QSOs are tentatively scheduled to happen between now and April 20, 1997.

Linenger will remain aboard Mir with Cosmonauts Vasily Tsibliev and Alexander Lazutkin until mid-May.

[ANS thanks the ARRL and Keith Baker, KB1SF, for this story.]

AMATEUR SATELLITES

HR AMSAT NEWS SERVICE BULLETIN 081.04 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.04

Get ready to learn something NEW--from the EXCITING WORLD of Amateur Radio SATELLITES! Sign up for a fast-moving five-hour workshop on everything you need to get *on the birds.*

Become an expert operating through digital satellites, the *easy-sats,* low-orbit and high-altitude satellites such as AO-10, the upcoming Phase-3-D satellite, Russian satellites, and learn a bit about Russia's MIR space station and NASA's SAREX missions. you'll hear about needed equipment, and how to use FM, SSB, digital and CW modes, including dial-in access to a packet satellite without spending money for equipment, via a satellite gateway node. When you leave, you'll know:
*** Equipment Choices
(everything including pre-amps, power amps)
*** Equipment Set-up
*** Antennas, Rotators and Feedlines
*** Software for Tracking

*** Operating Protocol and Hints
*** What Information is Available for You from AMSAT and ARRL
*** Frequencies--What Countries or Regions You Can Work

WHAT: Amateur Satellites -- Today and Tomorrow
Be the Expert and start having Fun!

WHO: Ed Krome, K9EK, AMSAT expert from Columbus, IN, will be your instructor.

WHEN: Friday June 13, 2 PM - 7 PM. Arrive early to get materials.

WHERE: in association with the SeaPac Convention
Seaside Convention Center - Seaside, Oregon

HOW: Space is limited; to pre-register write or call Rosalie White, WA1STO, at ARRL HQ (Tel 860-594-0237, fax 860-594-0259) before June 4. Price is $20 for ARRL members and $25 for non-members. You'll receive free materials and 5 hours of practical information. Sponsored by ARRL and AMSAT. You can also purchase Satellite Experimenter's Handbook, from ARRL, beforehand, for $20 + $5 UPS shipping/handling.

This continuing education workshop is sponsored by AMSAT and ARRL Educational Activities Department. Those who take part all day will earn a certificate for 0.5 Continuing Education Units.

[ANS thanks Rosalie White, WA1STO, for this notice.]

SB SAT @ AMSAT $ANS-081.05
OSCAR-11 REPORT

HR AMSAT NEWS SERVICE BULLETIN 081.05 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.05

OSCAR-11 celebrated its 13th birthday on March 1st. and still going strong! Congratulations to the University of Surrey on a wonderful achievement. During the period 19-February to 18 March, good, steady signals have been received from the 145.826 MHz beacon. Good signals have also been received on 435 MHz, Saturday 15 March, 14:00 pass, when the satellite was being commanded by ground control.

Recent telemetry shows that the solar eclipses have reduced the internal temperatures by about eight degrees compared to the full sunlight condition. The battery voltage appears to be showing a tendency towards lower values, often around 13.5 volts. The spin period has varied from 300 to 382, but most of the time it is around 365 seconds.

The WOD survey of channels 1, 2, 3, 61, (magnetometers) dated 02-January-97 was transmitted until February 22nd. An ASCII file of

this WOD is now on the WWW (in addition to the binary file), see below for URL. The WOD channels are now 40, 50, 52, 63, (Array voltage, battery charge, battery voltage, BCR status). This new WOD shows the effect of eclipses on the array voltage, and the battery voltage which varies from 14.0 down to 13.0 volts. The plots also show the effect of satellite spin, which modulates the current, and voltages. The BCR (battery charge regulator) switches from between unit A and unit B, several times during the WOD. A short file of this interesting WOD is also on the WWW site, and will be updated when the WOD is changed, and the maximum amount of data has been received.

Two AMSAT bulletins by Richard G3RWL have been uploaded. Topics have included OSCAR-11 status report, OSCAR-10 Keplers, and call for AMSAT-UK colloquium papers.

The operating schedule is unchanged.

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted, and between ASCII TLM and WOD.

The mode-S beacon is ON, but telemetry indicates that it has partially failed, and delivering half power. Any reports of reception on 2401 MHz. would be most welcome. Please e-mail g3cwv@amsat.org.

The 435.035 MHz. beacon is normally OFF. However it can sometimes be heard when the satellite is being commanded by ground control, i.e. within range of Guildford, UK. Likely times are between 13:00 and 18:00 UTC, Fridays or at weekends. When the 435 beacon is transmitting, the 145 beacon is normally OFF. The data transmitted is mainly binary. Web site for OSCAR-11 data and some software - http://www.users.zetnet.co.uk/clivew/

[ANS thanks Clive Wallis, G3CWV, news item.]

SB SAT @ AMSAT $ANS-081.06
10 GHz EME RECORD

HR AMSAT NEWS SERVICE BULLETIN 081.06 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.06

On Wednesday, 12 March 1997, a new world record for EME on 10 GHz was set in a QSO between Joe DJ7FJ and Greg ZL1GSG. The two-way QSO took place at 08.30 UTC. DF7FJ operated from Schiltach in southwestern Germany and ZL1GSG from Awhitu Peninsula / Manukau Heads southwest of Auckland, New Zealand. The great circle distance between the QTH's is approximately 18340 km or just under 10000 nautical miles. DF7FJ and his team were using a 4.5m parabolic dish and a 50W traveling wave tube power amplifier, while ZL1GSG used a 3m dish and a similar PA.

"O" reports were exchanged both ways..

The new world record came after a series of unsuccessful attempts and one semi-successful attempt that saw ZL1GSG using a 1.8m dish from Muriwai, on NZ's West Coast northwest of Auckland. Prior to the successful QSO, a test run from Awhitu Peninsula confirmed on the weekend before that moon echoes were clearly audible from the receiver's speaker even a few meters away from ZL1GSG's van. Earlier echoes using the 1.8m dish had been very faint. The change to a larger dish had clearly made the difference.

On the night of the QSO, moon echoes were received by ZL1GSG well from about an hour before sked time. A last-minute technical problem, caused by a short in the cable that switched the waveguide TX/RX relay, put the whole project in jeopardy just minutes before the QSO began. However, Greg's policy of having a spare bit of next to everything provided a makeshift solution only a few minutes into the sked window, and contact was established almost immediately after ZL1GSG was QRV again. The signals from Germany were clearly audible as had been the moon echoes.

Congratulations to Greg ZL1GSG and Joe DJ7FJ from their New Zealand ground support team of the day: Bill ZL1TTH Tim ZL3VTV Ulrich ZL1DDL Thanks go to many amateurs who helped with the provision of equipment, time, and a QTH.

[ANS thanks Peter, G3PHO, Editor: RSGB Microwave Newsletter for this report.]

SB SAT @ AMSAT $ANS-081.07
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 081.07 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.07

MIR:
(New frequencies implemented 1 January 1997:
Uplink 145.2 MHz FM Downlink 145.8MHz FM)
Note, the above split is used for both packet and voice operation.

SAFEX, MIR 70cm Repeater
(Uplink 435.750MHz FM, Downlink 437.950MHz FM,

Subaudible tone 141.3 Hz)
The repeater operational and active..

RS-10:
(Uplink 145.865-145.905MHz CW/SSB, Downlink 29.36-29.4MHz CW/SSB)
Fred Andreas, ZR5FA, worked this bird most of the week using only 5W into a 1/4 wave and maintaining coms in this configuration for almost the entire pass. Unfortunately both RS-10 & RS-15 get very little traffic from his neck of the woods ,which is a pity considering how easy they are to work .
[ANS thanks Fred Andreas, ZR5FA, for this report.]

RS-12:
(Uplink 21.21-21.25MHz CW/SSB, Downlink 29.41-29.45MHz or
145.91-145.95Mhz CW/SSB)
The sat continues to provide excellent downlink signals in both T- and K-mode.
[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898MHz CW/SSB, Downlink 29.354-29.394MHz CW/SSB)
Fred Andreas, ZR5FA, has been following RS-15 "night" passes closely from ZS the past week and noticed the downlink signal on voice to be extremely strong lately (on par with RS-10) ,despite the apparent charging problem .There has been no noted activity on RS-15 from the African continent of late .
[ANS thanks Fred Andreas, ZR5FA, for this report.]

Be aware that RS-15 has battery charging problems. When the satellite is in the dark it has low output power..
[ANS thanks Geoff Perry for this report.]
(Hint: If SSB doesn't work for you, try CW. CW is very easy to hear on the downlink!)

RS-16
RS-16's 70 cm, 435.504 Mhz beacon on RS-16 operational.
The 10 meter beacon is not active at this time. Transponder is not operational.

FO-20
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Operating normally. Strong downlink signal.

KO-23
(Uplink 145.85, 145.9MHz FM, Downlink 435.175MHz FM,
9600 Baud FSK.)
KO-23 operating normally. Downloading data at a rate of 650 to 750 BPS.
.
KO-25:
(Uplink 145.87MHz FM, Downlink 436.5MHz FM,
9600 Baud FSK.)
KO-25 operating normally. Downloading data at a rate of 660 to 720 BPS.

These data rates result in accumulations of 600K to 900K per pass dependent on the duration the downlinking station is in the satellite footprint.
[ANS thanks Jim Weisenberger, AA7KC, for his reports on KO-25 and KO-23.]

AO-27:
(Uplink 145.85MHz FM, Downlink 436.8MHz FM)
Operating normally and lots of activity heard over North America and Europe.
As of NOV 2, the AO-27 schedule is as follows:
TEPR 4 = 16 = 8 Minutes in Length
TEPR 5 = 52 = 18 Minutes in Length

TX-3 is on Mid Power during TEPR 5.

This will have the TX turn on 8 Minutes after the satellite enters the sun for a duration of 18 Minutes. This is a "back to US Latitudes"operation.

N4USI, AO-27's current Command Station sends his thanks all for their messages about the satellite turning on later than expected. He reports he's deliberately letting the "turn on" time drift later (for about 4-5 Minutes) so stations in the southern latitudes can also have a chance to work AO-27. Every few months he will be letting the turn on time drift like this to give more stations a chance to make contacts thru the satellite.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, and Miguel A. Menendez, EA1BCU, for this update.]

FO-29
Voice/CW
(Uplink 145.9-146.0MHz CW/LSB, Downlink 435.8-435.9MHz CW/USB)
Digital
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600 baud BPSK)
FO-29 is in Analog mode at the current time.
The latest FO-29 Schedule can be found at.

SB SAT @ AMSAT $ANS-081.08
WEEKLY SATELLITE REPORT PT 2

HR AMSAT NEWS SERVICE BULLETIN 081.08 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-081.08

AO-10:
(Uplink 435.030-435.18MHz CW/LSB, Downlink 145.975-145.825MHz
CW/USB)
AO-10
Participants in the Amsat-UK Central England VHF Net reported good results
on AO-10. Malcom G7NFO had worked some interesting "DX" including TR8CA,
PP8KWA,ZS2BWB and PY0FF.
[ANS thanks John Heath, G7HIA, Net Controller, for this report.]

OSCAR-11
(Downlink 145.825MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz..)
During the period 19-February to 18 March, good, steady
signals have been received from the 145.826 MHz. beacon. Good
signals have also been received on 435 MHz., Saturday 15 March, 14:00
pass, when the satellite was being commanded by ground control.
[ANS thanks Clive Wallis, G3CWV, for this information.]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86MHz FM, Downlink 437.0513MHz SSB,
1200 Baud PSK. Beacon 2401.1428 Mhz.)
PACSAT (AO-16)
Russ Platt WJ9F, AO-16 Command Team , reports the digipeater on AO-16 has
been on for the last couple of months. In regards to the 2.4 GHz
transmitter, it does continue to work although WJ9F has not been leaving
it on for an entire orbit due to its high current load on the 10 v bus.
The battery charging scheme on the micros is managed during sunlight
by adjusting the RCPSK transmitter power up or down to charge and
not overcharge the batteries since we have no way to turn the solar
cells off. The S-band transmitter does not have the ability to vary
its output so it is a high current draw throughout the orbit. In the
past during Experimenters Days when we have turned on the S-Band
transmitter I had to scale back the output of the RCPSK transmitter
to levels that were difficult to receive and even with these low levels
the onboard software will still turn off the S-band TX if the Battery
voltage drops too low, which it did. I guess that's why we called them
Experimenter's Days! In the future I do plan to continue to turn on the
S-band TX as power allows. I hope this answers your questions.
[ANS thanks Russ Platt WJ9F, AO-16 Command Team for this report.]

AO-16 Data/Telemetry ON-LINE
uptime is 917/06:33:41. Time is Sun Mar 23 11:57:01 1997
Total Array C= 0.317 Bat Ch Cur=-0.070 Ifb= 0.079 I+10V= 0.319
TX:010C BCR:80 PWRC:5AE BT:3C WC:25 EDAC:EC

WOD Dump of Bus/Power Channels 10,13,1E,22,2D,33
Will dump for 24 hours / AO-16 Command Team <WJ9F>
Graphic information about WOD/Telemetry values can find it in:
http://www.arrakis.es/~ea1bcu/ao16.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

DO-17(DOVE)
(Downlink 145.825MHz FM, 1200 Baud AFSK.
Beacon 2401.220 MHz.)

DOVE is transmitting on 2M and on S-band 2401.220 MHz.
The command team is keeping the S-band transmitter on as a
test signal for those working on getting S receive equipment going.
The S transmitter is running about .8W to a whip that sticks out the top of
the satellite near one edge. In the northern hemisphere the whip is
pointed away from the earth, it's toward the earth in the southern
hemisphere. It is quite loud with a typical satellite S-band receive
setup, but in the northern hemisphere it will fade as much as 20 dB with
rotation of the satellite. Doppler of course is large, approximately
100 KHz during a pass.
[ANS thanks Jim white, WD0E, DO-17 Command Team, for this news.]

WEBERSAT (WO-18)
(Downlink 437.104MHz SSB, 1200 Baud PSK AX.25.)
Webersat (WO-18) is currently in MBL mode after last weeks system
crash. The satellite appears to be in good condition broadcasting
MBL telemetry.

<BEACON>
22 de Enero de 1997.
7 years ! Gracias a todos los amigos que lo hicieron posible.
Amsat - LU8DYF.
Graphic information about Telemetry values can find it in:
http://www.arrakis.es/~ea1bcu/lo19.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

IO-26 (ITAMSAT):
(Uplink 145.875, 145.9, 145.925, 145.95MHz FM, Downlink 435.822MHz SSB,
1200 Baud PSK.)
IO-26 controllers report that the spacecraft is now in IHT mode. The new
ROBOT software is under currently undergoing tests. The beacon reports
that the digipeater is OFF and that the ROBOT is undergoing tests.
Controllers ask that groundstations please do not transmit on any of
the satellite's uplink frequencies for the time being.
[ANS thanks Daniele Piercarlo, IK2XRO, ITMSAT Command Station for this
report.]

Are there any weather sats operational over the USA
other than NOAA-12 and NOAA-14? Is NOAA-9 still on
the air? Does METEOSAT transmit except when over Europe?
There are METEOSAT images available from the UK, but
I haven't seen any mention of the output frequency on
the weather FAQs.
The WXSAT program and my old scanner (with modified IF
for 40Khz bandwidth) yields pretty good pictures, but
with only two sats, there aren't enough passes to get
many images per day.
Ken K5MBV

No is the answer. Meteor 3-5 and Meteor 2-21 do, but they are off at the
moment. the geostationary satellites such ate meteosat are on around 1.7G.

Easy... just go to LogSat's home page at http://www.logsat.com and follow
the link to the Keplerian elements. Along with the elements for *real*
satellites, you'll also find those for the moon.

From: ssnow27716@aol.com
Message-ID: <19970325081400.DAA06126@ladder01.news.aol.com>
Source record: 19388

Hi,

I'm an Aerospace Engineering undergrad checking out this newsgroup. New to all this satellite tracking stuff. Just got out of lower division. Trying to stay ahead of the game! Figured this group was a great place to start. My loves are Astronomy & Physics and a bunch of other stuff!!

Just now joining my school's microsatellite design team. I'll probably start out with the grunt work until I get more literate. Have a few shareware satellite tracking programs & astromony trackers....have fun playing with those. And, I've got the URL for NASA's real time shuttle tracker. Primitive compared to you guys...I'm sure!! :>)
I've seen labs at school...doing exactly what you all are doing....but, I'm not at that level, yet. :>(Anyone wanna help "edumocate" me?? :>)

Can you tell me more? What are you all keeping track of satellites for? Are you downloading data? Uploading? Trying to hack govt stuff? Re-direct spy satellites? Decoding secret messages? Trying to knock down missiles in the boost phase? What? :>)

How can I join in? What are you doing with all this Kep stuff?
In fact, what is all this Kep stuff? I'm assuming they're orbital path data...but, don't yet know how to use em! :>(

To be frank, [actually I'm Stan ;>)].....I'm not seriously interested in tracking satellites as a career. But, I do want to know what you're all talking about and if I can get more fun outa this PC!

I'm happy in anything related to Flight Test Engineering....air....space....anything. Even Balloon launces!! And, I'm sure I'll get shuffled around....so, I try to keep an open mind and broad background.. For now, I'm more into Remote Sensing component design and I have a senior project in mind where I'm going to need the help of some good ME's, AE's, and EE's. I need people who can help me "visualize" and track a low frequency radio source If that's not possible, I'll settle for a few blips on an O-scope. Whatever I learn from you all....I'm sure will help.

Just direct email me at SSnow27716@aol.com
Thanks,

Source record: 19389

Searchin for little green buggers, huh?

Cool !!!! :>)

I'm new here. Finally something to which I'm more literate than some of you guys!! And, now I feel like I can contribute to this area!! Thanks!! No offense!! :>)

Ok....Radio Astronomy.....

Where do you want to begin?
True Astronomers would love to "see" in everything from Radio, Microwave, IR, Visible, UV, X-ray, Gamma, and beyond! But, there's these annoying Ham guys cluttering up the sky! ;>) j/k. Anytime you wanna talk Astro or Astophys...just yell.

Seriously.....NASA's SETI program....last I checked...had 60 seporate sky surveys....some broad band searches.....some only in a few wavelengths. Just depends on many factors these guys took into account. (I have some of that info around here on my hard-drive...could look.) Also, the Aricebo (bad spelling?) Telescope under Cornell University has assisted me with sky data in the past....they're on the web.

Popular Mechanics also published a neat little article on amatuer radio and the home PC as related to project Argus (I believe that was the name.) :>) Can't remember the name of the organization running it....have their brochure around here somewhere (They're on the web...try searching under "argus AND seti"). For a membership fee....they'll send you info on how to build your home base "ET phone home" unit and assign you to a section of the sky in the "waterhole". You can use a 10ft analog dish, some equipment, and your soundcard....to look for irregularities in signals. Then, cut & past & send them to a pro for analysis.....stuff like that.

I can tell you that I'm looking for Low frequency observations of re-entry craft...not really aliens or UFO's.. And, most the frequencies I ran accross were scattered in the the kHZ to GHz range. I want full view of the Hz-MHz. :>(USAF Space Command also publishes several classified & unclassified catalogs...though they're not really into tracking Morse code from lil green men....mostly small rocks and bad guy stuff. Many of the Air Force and Naval labs on the web might answer a few questions for you. And, the Air Force 2025 plan highlights the implementation of a Planetary Defense System against big rocks & snowballs....as important to national security. So, you may see a greater concern over viewing the sky in a full sphere from here to Pluto in a few years and a tighter relationship between Astronomy and the AF.

Here's a few links for you:

aol://4344:535.astrdisc.3605650.493779699
http://www.dtic.mil/defenselink/factfile/chapter1/spacecom.html

http://web.fie.com/fedix/afosr.html
http://skyview.gsfc.nasa.gov/cgi-bin/v2.3/skyview_advanced

You can have whatever info of mine that you'd like...but, I'm more into Plasma Sheath stuff. Think the SETI program's real neato....but, I'm caught up in other stuff.

I'm here looking for info on the equipment & techniques for radio imaging. Want to learn the process from antenna design to DSP on my PC. If you learn anything...please let me know....email's the best way to catch me.

Say....anyone want to tell me where you acquired the cheapest possible equipment like this surplus dish.?

Interested in observing a low freq source.....from dish to squiggly lines on my PC.

Can you describe the system better? And the vendors? Student budget, here.
Thanks.

Also....looking for access to a spectrometer that can cover from 20Hz-200MHz. (This is the range I'd like to be able to study.)

Any suggestions.

Hi! I have built two Down East Microwave converter for 2.4Ghz and it works very well with the preamp. in the antenna (small dish of 60 cm. diameter) It is easy to build and no need alignement(only for the first oscilator in 96 Mhz.).
You can get more informattion about the kit in:
http://downeastmicrowave.com
Hope that helps a little.

Subject: Looking for keplerian data of the moon ?

Easy... just go to LogSat's home page at http://www.logsat.com and follow
the link to the Keplerian elements. Along with the elements for *real*
satellites, you'll also find those for the moon.

From: eagle28@ix.netcom.com (Gerald "Jerry" Rosengreen)
Subject: Norad / US Spacecom Satellite Catalog Number

Hello all,
I am a radio technician in the USMC and have been using STSPLUS
to track various satellites and have noticed some disparities in the
satellite catalog numbers from various sources. For example I have
the TLE file (964) that lists TDRS-1 as #13969, TDRS-3 as #19548, etc
and the satellite sit report from Goddard lists TDRS-1 as #13967,
TDRS-3 as #19544, etc.
Can anyone shed some light on this for me. I would greatly
appreciate any assistance provided.

Best Reguards,
Jerry

Lineage = 18Q9116 / KAVN9927 / KBMD9044

That which I post is intended to be freely shared by all.
I know their may be errors, please correct them as found.

From: Gary Watts <gwatts@bensoft.com>
Subject: RS-10/11

Anthony,
I dont want to spoil your fun but here are a few problems that you will
have.
1. you will most likely chirp while the pll in your ht locks up
on your transmit frequency
2. correct procedure is to STAY on one receive frequency and and vary your
transmit frequency to compsate for doppler shift to stay on your downlink
frequency.. With a ht you will be all over the the place?
3. Make sure the mic is disabled since any audio getting into the
mic/transmitter will cause fm'ing of the downlink signal
4. low transmit power level.. granted it dont take a lot of power to work
RS-10 but 10 - 25 watts would be more reliable

Yes.. US Hams can do CW and SSB thru the RS-10 Satellite
Check out www.amsat.org
they have a LOT of good information there

Good luck.
Give it a try.. see if you can at leat hear yourself
:-)

for example
145.850 up
29.385 down
+ or - for doppler

I hope I have the freqs right.. it has been a few years
:-)

<snip>
Ken,
These are the only active wxsats (the Russian Meteors are currently
turned off.) The other Russian sats, OKEAN and SICH, only transmit over
Russia. NOAA K (NOAA-15) is due for launch later this year. METEOSAT

is a European Geostationary Sat its US equivilants are GOES 8 (East) and
GOES 9 (West), they transmit on 1.691 Ghz. You'll need some special
equipment to receive them (i.e. dish or loop yagi, downconverter, etc).

Regards,
Rolf

No is the answer. Meteor 3-5 and Meteor 2-21 do, but they are off at the
moment. the geostationary satellites such ate meteosat are on around 1.7G.

SB SAT @ AMSAT $ANS-329.01
AO-13's ENGINEERING BEACON CEASED TRANSMITTING

HR AMSAT NEWS SERVICE BULLETIN 329.01 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 24, 1996
TO ALL RADIO AMATEURS BT
BID: $ANS-329.01

Graham Ratcliff, VK5AGR, of the A0-13 command team, reports that
the AO-13's Engineering Beacon ceased transmitting during the Q block
time-stamped AMSAT Day Number 6902 i.e. 24Nov96 @ 05:38:16
approximately MA 31 or 32 on Orbit Number 6481.

Graham confirmed this loss of signal with Elgar VK5ED who was also
monitoring the telemetry when the transmission stopped.

Further attempts to command AO-13 to date have been unsuccessful!

Therefore, it is with GREAT SADNESS that we must assume that
AO-13 is DEAD!!!!

[ANS thanks Graham Ratcliff, VK5AGR, of the A0-13 command
team, for this sad news.]

/EX

SB SAT @ AMSAT $ANS-329.02
AO-13's LAST DAYS

HR AMSAT NEWS SERVICE BULLETIN 329.02 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 24, 1996
TO ALL RADIO AMATEURS BT
BID: $ANS-329.02

ANS has put together a compilation of reports about the last days of
AO-13's life. Most of the reports are from the command team, but a few
came into the ANS desk via the internet.

AO-13 is still alive as of Nov23 13:35 UTC Orbit #6479..
BUT: The Telemetry sensor for Panel 3 is dead and shows ZERO mA
since Orbit #6478 which appeared here this morning at
3:06 utc..

Thus it looks like that AO-13 lost one of it's six solar panels.
Also the SERI temperature sensor now jumped to over +80 deg Celsius,
which is a substantial increase.
73s de Peter Guelzow, DB2OS

N QST ** AO-13 Only One Solar Panel Still Working **
After AO-13's last perigee (6479/6480) only solar panel #5 is
still working. Therefore, all transponders have been switched
off to conserve power. The Engineering Beacon will be left
running with the Hi-gain antennas from MA 20 to MA 200 and
with the Lo-gain (omnis) from MA 200 through perigee to MA 20.
Peter/DB2OS James/G3RUH Graham/VK5AGR Stacey/W4SM

Since AOS of orbit 6480 in Ft. Worth, TX, only panel #5 has been
producing current. The transponder is still functioning at 2217 UTC.
AOS was at approximately 2019 UTC. It can't last much longer!
The BIRTH ANNOUNCEMENT on the Beacon is very appropriate!
73 - Keith, W5IU

Telemetry captured from 04:37:38 to 04:42:54 UT, Sunday Nov. 24,
Orbit 6481, MA 001 to 003, shows, that Panel 5 is still delivering
power.
Viktor W. Kudielka,. OE1VKW

This last message came from A0-13 a few days before it lost the ability
to send TLM. ANS believes this is a fond farewell to us from an old
friend.

M QST de AO-13 BIRTH ANNOUNCEMENT 1996 Nov 20 0240 EST
My child, P3D, began "thinking" today when its IHU was activa-
ted. I'm glad I lived long enough to learn of this wonderful
event. I wish P3D a long, functional life. Do not grieve for
me when I'm gone. I'm only metal, plastic, & sand. My "life"
came from enriching the lives of those who built, commanded &
utilized me, and it's been a good "life". Danke Karl, et al. No
regrets. The baton will soon be passed. AO-13 signing off....

SB SAT @ AMSAT $ANS-083.01
PHASE 3-D LAUNCH DELAYED

HR AMSAT NEWS SERVICE BULLETIN 083.01 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 24, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-083.01

In a formal announcement from Paris on March 24th, the European Space Agency (ESA) said that the second test flight of their new Ariane 5 booster has now been re-scheduled from July to mid-September, 1997. It is this flight, Ariane 502, on which Phase 3-D is currently manifested.

According to their latest announcement, this action was being taken by ESA and CNES (the French Space Agency which manages the Ariane 5 program for ESA) in order to "improve (the booster's) robustness, increase the operational margins and allow for degraded operating modes".

In a joint statement a day after the ESA announcement, Phase 3-D Project Leader and AMSAT-DL President, Dr. Karl Meinzer, DJ4ZC, along with AMSAT-NA President Bill Tynan, W3XO, expressed continuing confidence that ESA and CNES will succeed in completing all the tasks necessary for a successful flight test of Ariane 502.

"Naturally, we are disappointed that our launch will not be as soon as we had hoped", said Meinzer. "However, I am pleased that ESA and CNES are taking care to improve the operational margins for the Ariane 5 booster. This action helps give us renewed confidence in the overall probability for a successful launch of our satellite," he said.

Both Meinzer and Tynan emphasized, however, that this launch delay, like the earlier ones, means that the total cost of the Phase 3-D Project will increase significantly. Even before the latest ESA announcement, AMSAT-DL and AMSAT-NA were projecting a combined budget shortfall of about two hundred thousand dollars (US) in the money needed to complete their respective tasks on the project.

"This shortfall can only increase now as a result of this latest schedule change", said Tynan. Both AMSAT leaders urged everyone to continue doing as much as they possibly can to insure the needed funds will be in place for the completion and launch of Phase 3-D.

Stay tuned to the AMSAT News Service for further details on the completion, testing and launch of the AMSAT Phase 3-D International Satellite.

[ANS thanks Karl Meinzer, DJ4ZC, Werner Haas, DJ5KQ, Bill Tynan, W3XO, and Keith Baker, KB1SF, for the information that went into this bulletin item.]

1050. NORAD Two-Line Orbital Element Sets (TLE965)

Newsgroup: rec.radio.amateur.space
Date: 1997-03-25 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5h9gh8$qid@blackbird.afit.af.mil>
Source record: 19404

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

Does the Auto Tracker rotor and radio control hardware compare favorably with the KCT and other hardware? It looks like it would be very user friendly with Wintrak Pro. Anyone have experience with this box and other hardware?

Ken K5MBV

Hi, I'm just getting started again on the satellite scene after a break of many years (I was last active on OSCAR6 and 7 !). Please can anyone give me the 70 cm UPLINK frequencies for the current satellites - the low orbit ones only please. I have looked in the back issues of the limited number of magazines that I have but can't find them.

Thanks and 73's Keith.

SB SPACE @ ARL $ARLS008
ARLS008 Phase 3D delayed

ZCZC AS08
QST de W1AW
Space Bulletin 008 ARLS008
From ARRL Headquarters
Newington, CT March 25, 1997
To all radio amateurs

SB SPACE ARL ARLS008
ARLS008 Phase 3D delayed

Modifications to the Ariane 5 rocket's electrical systems and software will mean another costly delay for the Phase 3D Amateur Radio satellite. The European Space Agency (ESA) announced March 24, that the Ariane 502 which will carry Phase 3D aloft from Kourou, French Guyana, has been rescheduled for a mid-September launch. ESA said the schedule change was in response to recommendations of a board of inquiry that looked into the causes for the failure of the Ariane 501 launch last year.

''This additional action, which does not call into question the design of the launcher nor its flight readiness, is intended to improve its robustness, increase the operational margins and allow for degraded operating modes,'' an ESA press release said.

AMSAT-NA President Bill Tynan, W3XO, said a complete analysis had not yet been done but that he believed the delay would add ''on the order of 100,000 dollars'' to Phase 3D's cost. That's on top of an estimated 200,000 dollars combined funding shortfall that AMSAT-NA and AMSAT-DL were reporting in late February. So far, AMSAT-DL has invested nearly 2 million dollars in Phase 3D, compared to nearly 1.4 million dollars for AMSAT-NA. ''Every month adds costs,'' Tynan concluded.

Phase 3D fund-raising efforts will continue. Earlier this year, the Japanese AMSAT group, JAMSAT, helped bridge the funding gap by transferring 50,000 dollars to AMSAT-NA. The money represented excess donations from JAMSAT members for the Phase 3D SCOPE camera. The completed SCOPE camera, designed and built entirely by JAMSAT, has been installed and successfully powered up at the Phase 3D Integration Laboratory in Orlando, Florida, where preparation and testing continue.

Tynan emphasized that the Phase 3D team plans to take maximum advantage of the schedule change to perform additional testing. ''It's not time being wasted,'' Tynan said, adding that the Phase 3D team ''will use the delay to be even more sure about the spacecraft's readiness.''

Prior to announcement of the latest delay, AMSAT-NA Vice President Keith Baker, KB1SF, had been reporting that AMSAT was racing to meet the early July launch schedule and that work on the satellite was moving along swiftly.

A series of pictures of Phase 3D work in progress is available via the AMSAT-NA Web site at http://www.amsat.org. Depending on its workload, the integration team hopes to be able to update these photos as work progresses.

It's like when the Post Office raise the rates for postage - they have to pay the extra storage costs!

Sorry, I couldn't resist, but I, too, am curious why the delay costs so much.

Content-Transfer-Encoding: 7bit
Content-Type: text/plain; charset=us-ascii

Hello,

I am attaching a short note about our attempt on Saturday.

Please note that referenced URL should be: iquest.com/~hal5 --
leave off the "www" for some unknown reason.

If you have any other questions, I'd be happy to receive e-mail
messages and try to answer questions as best I can.

Ron Creel

---------------------------------30262576114313
Content-Transfer-Encoding: 7bit
Content-Type: text/plain

Proud of Space Launch Attempt

Yes, I'm very proud of the HALO (High Altitude Lift Off) Space Launch
Attempt which the HAL5 (Huntsville Alabama L5 Society) made on March
22 in North Carolina. Note: See more about HALO on our web page at
http://www.iquest.com/~hal5

Everything was going great - the 54,000 cubic foot balloon launch
platform (largest balloon we had inflated thus far) was ready. The
Federal Aviation Administration had given us an extension on our
balloon launch window, rocket systems were ready, and the wind was
even cooperating.

Then the unexpected jumped up to squelch our efforts. Several squib
devices were erroneously activated by their connected timer. The timer
was evidently miscued by stray signals from the color TV camera onboard
the balloon gondola containing the HALO rocket. This removed our
redundancy for assuring that the balloon could untimately be made safe
(i.e. cut down) after the planned rocket ignition over the Atlantic
Ocean.

Therfore, for safety reasons, the balloon launch and subsequent HALO
rocket launch were postponed. Since we had nearly exhausted our
supply of helium and the predictions of wind conditions for the next
day were not favorable, (and the all-volunteer team had jobs to go to
on Monday) a decision was ultimately made to come back for another

launch attempt at another time.

In the face of this extreme disappointment, I am very proud of all of the HALO team. A great amount of time, effort, and funds have been expended by a very dedicated team of "amateurs" to get the HALO Space Launch attempt to this point of progress. Yes, we are very disappointed at getting so close to our goal and being slapped in the face. But we are not discouraged.

We are determined and we'll be back!

Ron Creel, HALO Team Member

While the Mars probe is not orbiting the Earth, it does not have any NASA two line elements, which could be plugged into any traditional satellite tracking programs.

The Mars probe definitely has classical keplerian heliocentric (relative to the sun) elements. Many programs intended for calculation of the position of planets and comets will accept these heliocentric keplerian elements, thus if you can find the elements for the Mars probe, you can calculate the position for it using these programs.

During the complex Earth-Venus-Earth-Jupiter flight path of the Galileo space probe, elements were published for each leg in sci.space.tech or sci.space.science newsgroups. These groups would be a better place to ask for them. Also NASA and JPL www-pages might be a good place to search.

I was using Telix to upload the kepler elements to TrakBox long time
ago, after that I moved to SatSked, and finally minicom (Linux).

There is a problem in how fast the data is sent to TrakBox. You should
check the line pace for ASCII transfers in your Telix program. A good
value for me is 100ms per line.

SB SAT @ AMSAT $ANS-083.01
PHASE 3-D LAUNCH DELAYED

HR AMSAT NEWS SERVICE BULLETIN 083.01 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 24, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-083.01

In a formal announcement from Paris on March 24th, the European Space
Agency (ESA) said that the second test flight of their new Ariane 5
booster has now been re-scheduled from July to mid-September, 1997. It
is this flight, Ariane 502, on which Phase 3-D is currently manifested.

According to their latest announcement, this action was being taken by ESA
and CNES (the French Space Agency which manages the Ariane 5 program for
ESA) in order to "improve (the booster's) robustness, increase the
operational margins and allow for degraded operating modes".

In a joint statement a day after the ESA announcement, Phase 3-D Project
Leader and AMSAT-DL President, Dr. Karl Meinzer, DJ4ZC, along with AMSAT-NA
President Bill Tynan, W3XO, expressed continuing confidence that ESA and
CNES will succeed in completing all the tasks necessary for a successful
flight test of Ariane 502.

"Naturally, we are disappointed that our launch will not be as soon as we had hoped", said Meinzer. "However, I am pleased that ESA and CNES are taking care to improve the operational margins for the Ariane 5 booster. This action helps give us renewed confidence in the overall probability for a successful launch of our satellite," he said.

Both Meinzer and Tynan emphasized, however, that this launch delay, like the earlier ones, means that the total cost of the Phase 3-D Project will increase significantly. Even before the latest ESA announcement, AMSAT-DL and AMSAT-NA were projecting a combined budget shortfall of about two hundred thousand dollars (US) in the money needed to complete their respective tasks on the project.

"This shortfall can only increase now as a result of this latest schedule change", said Tynan. Both AMSAT leaders urged everyone to continue doing as much as they possibly can to insure the needed funds will be in place for the completion and launch of Phase 3-D.

Stay tuned to the AMSAT News Service for further details on the completion, testing and launch of the AMSAT Phase 3-D International Satellite.

[ANS thanks Karl Meinzer, DJ4ZC, Werner Haas, DJ5KQ, Bill Tynan, W3XO, and Keith Baker, KB1SF, for the information that went into this bulletin item.]

Subject: WXSAT reception

Hi,

I am just getting into WXSAT reception and would appreciate any help.

I am using the WXSAT programme, which utilises the PC's soundcard to decode the pictures. I am using 137 MHz and have had some success with NOAA's 12 & 14 and Meteor 3-5. Are there any other sats that I should be looking for in this band?

Also, re. the WXSAT prog; I can get it to produce a live picture OK, but if I try to auto record it doesn't want to know. Also, in the parameters window there are many different parameters to adjust...can anyone give me a rundown of the optimum settings please? Do any of the sats available on 137 MHz send colour pics, or are they all monochrome.

Thanks in advance for any help

Mike

SB SPACE ARL ARLS008
ARLS008 Phase 3D delayed

Modifications to the Ariane 5 rocket's electrical systems and software will mean another costly delay for the Phase 3D Amateur Radio satellite. The European Space Agency (ESA) announced March 24, that the Ariane 502 which will carry Phase 3D aloft from Kourou, French Guyana, has been rescheduled for a mid-September launch. ESA said the schedule change was in response to recommendations of a board of inquiry that looked into the causes for the failure of the Ariane 501 launch last year.

''This additional action, which does not call into question the design of the launcher nor its flight readiness, is intended to improve its robustness, increase the operational margins and allow for degraded operating modes,'' an ESA press release said.

AMSAT-NA President Bill Tynan, W3XO, said a complete analysis had not yet been done but that he believed the delay would add ''on the order of 100,000 dollars'' to Phase 3D's cost. That's on top of an estimated 200,000 dollars combined funding shortfall that AMSAT-NA and AMSAT-DL were reporting in late February. So far, AMSAT-DL has invested nearly 2 million dollars in Phase 3D, compared to nearly 1.4 million dollars for AMSAT-NA. ''Every month adds costs,'' Tynan concluded.

Phase 3D fund-raising efforts will continue. Earlier this year, the Japanese AMSAT group, JAMSAT, helped bridge the funding gap by transferring 50,000 dollars to AMSAT-NA. The money represented excess donations from JAMSAT members for the Phase 3D SCOPE camera. The completed SCOPE camera, designed and built entirely by JAMSAT, has been installed and successfully powered up at the Phase 3D Integration Laboratory in Orlando, Florida, where preparation and testing continue.

Tynan emphasized that the Phase 3D team plans to take maximum advantage of the schedule change to perform additional testing. ''It's not time being wasted,'' Tynan said, adding that the Phase 3D team ''will use the delay to be even more sure about the spacecraft's readiness.''

Prior to announcement of the latest delay, AMSAT-NA Vice President Keith Baker, KB1SF, had been reporting that AMSAT was racing to meet the early July launch schedule and that work on the satellite was moving along swiftly.

A series of pictures of Phase 3D work in progress is available via the AMSAT-NA Web site at http://www.amsat.org. Depending on its workload, the integration team hopes to be able to update these photos as work progresses.

Wonder if it wouldn't be less expensive to
find another launch vehicle? At this rate
we are *never* going to get off the ground!
What was the original launch schedule? How
many times has it been rescheduled? How many
unsuccesful launches has this agency had?
Ken K5MBV
~~~~~~

In a formal announcement from Paris on March 24th, the European Space Agency (ESA) said that the second test flight of their new Ariane 5 booster has now been re-scheduled from July to mid-September, 1997. It is this flight, Ariane 502, on which Phase 3-D is currently manifested.

According to their latest announcement, this action was being taken by ESA and CNES (the French Space Agency which manages the Ariane 5 program for ESA) in order to "improve (the booster's) robustness, increase the operational margins and allow for degraded operating modes".

In a joint statement a day after the ESA announcement, Phase 3-D Project Leader and AMSAT-DL President, Dr. Karl Meinzer, DJ4ZC, along with AMSAT-NA President Bill Tynan, W3XO, expressed continuing confidence that ESA and CNES will succeed in completing all the tasks necessary for a successful flight test of Ariane 502.

"Naturally, we are disappointed that our launch will not be as soon as we had hoped", said Meinzer. "However, I am pleased that ESA and CNES are taking care to improve the operational margins for the Ariane 5 booster. This action helps give us renewed confidence in the overall probability for a successful launch of our satellite," he said.

Both Meinzer and Tynan emphasized, however, that this launch delay, like the earlier ones, means that the total cost of the Phase 3-D Project will increase significantly. Even before the latest ESA announcement, AMSAT-DL and AMSAT-NA were projecting a combined budget shortfall of about two hundred thousand dollars (US) in the money needed to complete their respective tasks on the project.

This shortfall can only increase now as a result of this latest schedule change", said Tynan. Both AMSAT leaders urged everyone to continue doing as much as they possibly can to insure the needed funds will be in place for the completion and launch of Phase 3-D.

Stay tuned to the AMSAT News Service for further details on the completion, testing and launch of the AMSAT Phase 3-D International Satellite.

The Russians still have 3 stand-by birds to be used. The last I have heard
they are in the process of WX station re-organization, henze the reason for
partial day-time ops.

My understanding was that if Ariannespace couldn't put up P3D on the Arianne 502 by July 1st, 1997, they would make arrangements to put it up on an Arianne 4 instead by that date. I think it's time to call that promise due....now. I urge all AMSAT members to write Bill Tynan asking him and the AMSAT Board to make our demand made known to Ariannespace, now.

It's like when the Post Office raise the rates for postage - they have to pay the extra
storage costs!

Sorry, I couldn't resist, but I, too, am curious why the delay costs so much.

Space Bulletin 009 ARLS009
From ARRL Headquarters
Newington, CT March 27, 1997
To all radio amateurs

SB SPACE ARL ARLS009
ARLS009 ATV rocket launches set

The Aerospace States Association Rockets for Schools program has announced plans to launch three rockets during May that will carry Amateur TV (ATV) payloads. All launches will use 11-foot-long Super-Loki sounding rockets identical to the rocket used for the successful Wisconsin Rockets for Schools program launch in May 1996 described in ''New Heights for ATV'' (QST, Feb 1997).

On May 10, a Super-Loki rocket carrying an ATV payload on 439.25 MHz with GPS data on the audio is scheduled to be launched from Cape Henlopen State Park in Delaware. If successful, the event will mark Delaware's first suborbital rocket launch. Teams of students in grades 7 through 12 are being recruited to assist in designing and building various payload components. For the latest information on the Delaware launch, see http://www.dpi.state.de.us/dpi/launch/ on the Web or contact Sam Guccione, K3BY, e-mail sguccion@outland.dtcc.edu.

On May 17, two Super-Loki rockets carrying ATV payloads will be launched at separate times from Sheboygan, Wisconsin, on the shore of Lake Michigan (the site of the May 4, 1996, launch). Current plans call for the first to transmit ATV on 434.25 MHz with Morse code telemetry on the audio, and for the second to transmit ATV on 439.25 MHz with GPS data on the audio. The Super-Loki rocket, which uses solid propellant, can carry the payload to altitudes of more than 30 miles.

For the latest information on the Wisconsin launches, see http://phy.mtu.edu/rocket/ on the Web or contact Greg Heinen, KB9OBV, email heineng@orbitec.com, or Bryan Suits, WB8WKN, email suits@mtu.edu.

Meanwhile, Bill Brown, WB8ELK, reports that an RFI problem led to scrubbing the planned North Carolina launch from a balloon of an

amateur rocket carrying ATV and APRS systems on March 22. The group of space enthusiasts, which includes several hams, will reschedule the launch of the ''rockoon''--a rocket launched from a high-altitude balloon--for sometime in late April.

Brown said RFI to a timer mechanism caused the balloon's ''cutdown squibs'' to fire just prior to liftoff. The cutdown squibs are a means to bring the balloon down automatically if ground control is lost.

The Huntsville Alabama L5 Society (HAL5)--a chapter of the National Space Society (NSS)--has spent the past two years developing and testing components for the rockoon. The HAL5 program is called Project HALO, for High Altitude Lift-Off.

A new launch date has not yet been set. For more details check the HALO Web site at http://iquest.com/~hal5/HALO/SL-1/ or e-mail hal5 (at) iquest.com.

Do we really want that? As far as I understand, Ariane 5 will give the bird a better (higher) orbit than Ariane 4 would (especially for the perigee...). Maybe we should accept a few months more to wait and get a better result!? (but maybe they could make a deal and get some kind of a reimbursement for the delay...?)

The real question is whether the Ariane 4 payload adapter is identical
to the Ariane 5 payload adapter and how much modification to the
satellite would be required to the satellite.

Since P3D is most likely going to be the only real payload (in
addition to some sand bags), the launch profile can be selected more
freely. Since a satellite is going to return to the same altitude
during each orbit as when the engines were turned off. To get a high
perigee, it would be preferable to let the engines run as long as
possible, i.e. use a light payload.

STS-PLUS is very nice, although a bit of a CPU hog (You'll want
something with a math co-processor to use it at all well).

Has some nice features; many different views, and a number of
ham oriented features. Some of the function keys are less than
logical, but it's easy enough to get the basic features working
and when you spend some time with it you can do some really handy
things (multiple tracks at once, automatic alarms as birds come into
vies, built up list of birds you wish to track, special support for
shuttle launches and much more.)

This program is frequently seen in the background in some shots of
NASA during shuttle missions and such; I believe the author has made
some additions at NASA's specific request.

The newest version should be available at

http://www.grove.net/~tkelso/

1081. QRM on Sats

Newsgroup: rec.radio.amateur.space
Date: 1997-03-28 00:00:00 UTC
From: Erik Skovgaard <Erik_Skovgaard@bc.sympatico.ca>
Message-ID: <01bc3b3f$189dbb60$09c56cce@default>
Source record: 19285

The QRM on some of the sats is reaching a really bad level. I frequently hear people calling CQ although they cannot even receive the stonger signals. Before you transmit, please beware that many of us have rather sensitive receivers and that your CQ may interfere with on-going QSOs.

The general rule is, if you can't hear the beacon, don't transmit.

Another problem is drift due to the Doppler effect. A lot of people simply drift on top of other QSOs.

If you can't hear your own signal, try using one of the satellite tracking programs, such as STSPLUS to keep track of both the uplink and downling frequencies. It requires your computer clock to be very accurate (+/- 10 seconds), but it gives a good indication fo the rate of adjustment required on the uplink.

73 and hope to work you on the birds de VE7MDL ....Erik.

Gents,

RS-16 does not seem to transmit on 10m these days. Try the beacon on
435.504 MHz which exhibits a strong signal. The transponder is not yet
enabled; at least it was not as of a few days ago.

Yeah, right. They want some more money from you, and thus they convince
Arianespace to postpone the launch of their prestigious next-generation
launcher so they can claim $50K/month from you.

You must be pretty narrow-minded to believe that.

Downlink 437.950 FM

SAREX Simplex (Space Shuttle)*
Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

---

* Radio Sport-15 has battery chargeing problems therefore the transponder
and beacon are silent when the satellite is in darkness.

* Radio Sport-16 currently has it's Mode A transponder turned off. The
ground controlers seem to be experimenting with the various beacons,
therefore it is difficult to predict which will be on, 29.408 seems to be
on most passes.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely
uplinked to it with a handheld on low power. On the other hand reception
of the 70cm downlink signal is more difficult without a directional antenna
most of the time. Therefore it is important to make sure
that you can hear the satellite downlink before you transmit therefor
avoiding interfering with others already on this one channel satellite
repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of
writing this satellite was reported to be in Analog mode.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital), at time of
writing this satellite was reported to be in Analog mode until March 21.

* STS-83 is scheduled to launch on April 3rd, 1997 at approximately
2:01 p.m. EST (1901 UTC). The launch window is 2 hours 30 minutes long.
STS-83 will include a SAREX package.

CALL SIGNS:

James D. Halsell, Commander, KC5RNI
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF

QSLs: Send reports and QSLs to ARRL EAD, STS-83 QSL, 225 Main Street,
Newington, CT 06111-1494, USA. Include the following information in your
QSL or report: STS-83, date, time in UTC, frequency and mode (FM, voice or
packet). In addition, you must also include a SASE using a large, business-
sized envelope if you wish to receive a card.

is published every week and is made available for non-commercial use.

* PHASE III-D LAUNCH DELAY *
============================
In a formal announcement from Paris on March 24th, the European Space
Agency ( ESA ) said that the second test flight of their new Ariane 5
booster has now been re-scheduled from July to mid-September, 1997. It
is this flight, Ariane 502, on which Phase 3-D is currently manifested.

According to their latest announcement, this action was being taken by ESA
and CNES (the French Space Agency which manages the Ariane 5 program for
```

ESA) in order to "improve (the booster's) robustness, increase the operational margins and allow for degraded operating modes".

In a joint statement a day after the ESA announcement, Phase 3-D Project Leader and AMSAT-DL President, Dr. Karl Meinzer, DJ4ZC, along with AMSAT-NA President Bill Tynan, W3XO, expressed continuing confidence that ESA and CNES will succeed in completing all the tasks necessary for a successful flight test of Ariane 502.

"Naturally, we are disappointed that our launch will not be as soon as we had hoped", said Meinzer. "However, I am pleased that ESA and CNES are taking care to improve the operational margins for the Ariane 5 booster. This action helps give us renewed confidence in the overall probability for a successful launch of our satellite," he said.

Both Meinzer and Tynan emphasized, however, that this launch delay, like the earlier ones, means that the total cost of the Phase 3-D Project will increase significantly. Even before the latest ESA announcement, AMSAT-DL and AMSAT-NA were projecting a combined budget shortfall of about two hundred thousand dollars (US) in the money needed to complete their respective tasks on the project.

"This shortfall can only increase now as a result of this latest schedule change", said Tynan. Both AMSAT leaders urged everyone to continue doing as much as they possibly can to insure the needed funds will be in place for the completion and launch of Phase 3-D.

[Info via the AMSAT News Service]

* HALE-BOPP NEWS *
==========
Completing an unprecedented year-long study of Comet Hale-Bopp using two NASA observatories, the Hubble Space Telescope and the International Ultraviolet Explorer, astronomers report that they are surprised to find that the differences in the nucleus seem to be isolated from each other. They also report seeing unexpectedly brief and intense bursts of activity from the nucleus during the monitoring period. The Hubble observations suggest that the nucleus is huge, 19 to 25 miles (30 to 40 kilometers) across.

The findings, by a team of scientists, led by Johns Hopkins astrophysicist Harold Weaver, are being published in the March 28 issue of the journal Science.

"Hale-Bopp will probably provide the most revealing portrait of the workings of a cometary nucleus since the spacecraft missions to comet Halley in 1986," said Weaver. "This is a unique opportunity; we have never had the chance to examine a comet in this much detail, over this large a range of distance from the Sun."

The key results:

Violent Eruptions on the Comet's Surface

During the course of long-term observations, which began in August 1995, astronomers unexpectedly caught the comet going through a sudden brief outburst, where, in little more than an hour, the amount of dust being spewed from the nucleus increased at least eight-fold. "The surface of Hale-Bopp's nucleus must be an incredibly dynamic place, with `vents' being turned on and off as new patches of icy material are rotated into sunlight for the first time," Weaver said.

A Complex, Mottled Nucleus

To their surprise, astronomers found that water ice sublimates (turns directly from a frozen solid into a gas) at a different rate than the trace ices, implying that those components are not contained within the water on the comet. This conclusion is further supported by Hubble data showing that the rate at which dust left the nucleus was much different than the sublimation rate of water. This result is contrary to previous models for a comet's nucleus which suggest that the trace components, such as carbon disulfide ice, are contained inside of the most abundant ice on the comet, frozen water. As water sublimates the trace components and dust should be released at similar rates, but this is not what Hubble observed.

A Monstrous Nucleus

By studying Hubble Space Telescope images, the astronomers have estimated that its nucleus may be about 19 to 25 miles (30 to 40 kilometers) in diameter. The average comet is thought to have a nucleus of about 3 miles (5 kilometers) in diameter, or even smaller. The comet or asteroid that struck the Earth 65 million years ago, possibly causing the extinction of the dinosaurs, was probably about 6 to 9 miles (10 to 15 kilometers) across.

Because Hale-Bopp was unusually bright when it was still a great distance away, well outside the orbit of Jupiter, it has given scientists their best view ever of the changes in a comet's nucleus as it gets closer to, and is progressively heated by, the sun. Those changes, in turn, provide information about the composition and structure of comets, which are believed to be remnants from the formation of the solar system, about 4.6 billion years ago. Learning more about comets can provide important information about the materials and processes that formed the solar system.

Image files in GIF and JPEG format and captions may be accessed on Internet via anonymous ftp from ftp.stsci.edu in /pubinfo.

There are lots of ways that a non-launch could run up the bill.
First, at Ariannespace, they undoubtably are not putting the
(sizeable) Arianne-V staff on furlough, so the bills add up
quickly. Assuming a meager $40K average annual salary,
that'd pay for 15 peoples' salaries, for example. In a business
like space launch, the volume isn't high, so fixed costs like
facility and payroll costs become a huge factor as timelines
shift.

Correct me if I'm wrong, but even with an extra $100K for the
delay, we're not paying near the going rate for a heavy lift
launch vehicle. This is still the best deal going...

Bob, are you assuming that AMSAT is subsidising the Ariannespace
operation? If this is correct you are right, but it seems to me
that we had a deal that would launch by a certain date for a fixed
price and would receive a ride on another vehicle if delayed beyond
a date which has now past. The track record for Arianne is getting
worse and we might at least consider the possibility that another
ride might be found even if it has to be a few months later that
this last promise (in which I have no confidence.)
Ken K5MBV

Well, you could use a PS/2 mouse...my Tyan Tomcat III mobo
has a PS/2 port at IRQ 12, leaving me with two free comm ports.

Or, alternatively, you could add another serial port on your
machine, provided you aren't already using IRQ 5. Most sound
boards use this IRQ, however, and even though most will
allow you to use IRQ 7 or others, many games generally need
sound support at IRQ 5.

I use an old 486 machine to control an AEA sat tracker, and
other dedicated station housekeeping functions as well.

Bob

Where do you think you can get a launch for $100K for this satellite
before september? Maybe at NASSA?
Also, did you review the Ariane-4 failure rate and compare it to
that of other companies before making the above statement?

Never thought we could get a launch for $100K. Since Arianne
hasn't kept any of its promises, we should get our money *back* and
at least look for another ride.
Also, I don't need to compare the Arianne-4 failure rate to know
that the Ariannespace track record for promises kept is getting worse.

> Can someone tells mewhere to find it?
>

Please keep in mind that although the moon does indeed orbit the earth, any possible set of Keplerian elements would only be an approximation. All of the satellite tracking programs assume that the mass of the satellite is negligible compared to the mass of the earth. This is a very good assumption for any man-made satellite but not for the moon. The mass of the moon is about 1/80 the mass of the earth, and therefore the moon exerts a non-trivial force on the earth. The earth does not orbit the sun for example, the center of mass of the earth-moon system orbits the sun.

It is thus not advisible to use your satellite tracking software to find the moon. There are other programs available for tracking the moon, check around the amateur astronomy groups. Instantrack (available from Amsat) does do the lunar orbit calculation correctly, using a different algorthim than it uses for artifical satellites.

SB SAT @ AMSAT $ANS-089.01
ANYONE FOR IPS?

HR AMSAT NEWS SERVICE BULLETIN 089.01 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 30, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-089.01

The Phase 3D satellite under construction, like its predecessors P3A, Oscar-10 and Oscar-13, has as its "brains", a computer system based on the RCA COSMAC 1802 microprocessor. The computer is running an operating system

called "IPS", and loaded into that environment is the flight software that does all the spacecraft command and control, housekeeping chores, battery charge control, navigation, transponder switching, beacon data generation and so on. But how many people know anything about IPS?
Not many nowadays. Well, here's a unique opportunity to discover all about it. IPS (Interpreter for Process Structures) was devised by Karl Meinzer DJ4ZC at a time when 1802, 6502, 6800 and 8080/Z80 processors were state of the art; around 1976-1979. At that time there just wasn't an easy-to-use, robust, engineering-oriented, multitasking and, above all, a portable operating system for cheap computers based on these MPUs and their tiny (boldly described as "massive") 16 Kbyte memories. Computers at that time meant the Atari 800, North Star Horizon etc.

An IPS Manual was written by Karl Meinzer in 1978, but was never published in any substantial form. A hand corrected draft printout was circulated to

a few interested AMSAT engineers who then reproduced it ad hoc, minus several chunks, via ever worsening photocopies. But the paper original was

long lost. Happily, in 1996 the manual was discovered to have survived on an Atari 800XL computer cassette tapes, and moreover in the mid '80s had been transferred to floppy disc by Robin Gape G8DQX, a prominent IPS contributor at that time. Thus, after a gap of nearly two decades, it has become practical to publish the document properly, and that's what James Miller has done. IPS is a threaded language not unlike Forth, a brilliant piece of software engineering, as relevant today as it ever was. From Karl's introduction Miller quotes:
"This book is organized into three chapters of increasing sophistication.

Chapter I presents an introduction to the language; the material
presented there will enable you to accomplish all "regular" programming
tasks. Chapter II introduces the assemblers for the COSMAC 1801/1802, the
8080, the 6800 and the 6502 allowing low-level extensions and interfaces.

Finally, Chapter III describes and documents the inner workings of IPS;
this material will be useful if you wish to extend or change IPS itself."

IPS - High Level Programming of Small Systems, by Karl Meinzer, is a 120
page A5 book in fold-flat ring-binder format, edited, typeset and re-
published at James Miller's own expense to recognize the author's 30 years
unparalleled contributions to the amateur satellite program.
This book is written in English. Net proceeds from the sale of this book
will be donated to the P3D Satellite Project.

Some sample pages (GIFs) are available at:
http://www.jrmiller.demon.co.uk/IPS/

There will be only one print run, and the size of this run will directly
determine the price. In order to tell the printer how many books to make,
Miller needs to know how many people are interested in how many copies.
The book will be published even if this is NIL! On the other hand, if the
print run is several hundred, a substantial donation will be poured into
the AMSAT P3D coffers, at a time when more cash is desperately needed.
If you are interested, please complete the 3-line form below, and e-mail it
back to James Miller, g3ruh@amsat.org
Return of this information places no obligation upon you to purchase
anything. IPS - High Level Programming of Small Systems" by Karl Meinzer

SB SAT @ AMSAT $ANS-089.03
ARRL/ TAPR DIGITAL CONFERENCE

HR AMSAT NEWS SERVICE BULLETIN 089.03 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 30, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-089.03

It's that time again! Time to make your calendar and think about what to publish for the upcoming 16th Annual ARRL and TAPR Digital Communications Conference. 1997 marks the second year in which the ARRL Digital Communications Conference and TAPR Annual General Meeting have joined into one conference!

The ARRL and TAPR Digital Communications Conference is an international forum for radio amateurs in digital communications, networking, and related

technologies to meet, publish their work, and present new ideas and techniques for discussion. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The Digital Communications Conference is not just for the digital expert, but for digitally-orientated amateurs of all levels of experience.

The 1997 ARRL and TAPR Digital Communications Conference will be held October 10-12, 1997 in Baltimore, Maryland. This year's conference location is just minutes away from the BWI (Baltimore/Washington International) Airport.

Not only is the Digital Communications Conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any of the ham digital communications modes. This includes APRS operators, networkers, software writers, modem designers, and digital satellite communications enthusiasts. The ARRL and TAPR Digital Communications Conference is for all levels of digital operators -- a must conference to attend to get active on a national level. Now, more than ever, amateur radio needs this great meeting of the minds, since it is important that we demonstrate a continued need for the frequency allocations we now have by pushing forward and documenting our achievements. The ARRL and TAPR Digital

Communications Conference is one of the few ways to record our accomplishments and challenge each other to do more.

The 1997 ARRL and TAPR Digital Communications Conference will be co-hosted by AMRAD (Amateur Radio Research and Development Corporation). The Amateur Radio Research and Development Corporation (AMRAD) is a worldwide club of amateur radio and computer experimenters whose purpose is to develop skills

and knowledge in radio and electronic technology, advocate design of experimental equipment and techniques, promote basic and applied research, organize technical forums and symposiums, collect and disseminate technical

information, and provide experimental repeaters.
http://www.amrad.org

Full information on the conference and hotel information can be obtained by contacting Tucson Amateur Packet Radio, 8987-309 E. Tanque Verde Road #337,

Tucson, AZ 85749-9399. Phone: (817) 383-0000. Fax: (817) 566-2544.

SB SAT @ AMSAT $ANS-089.05
OPEN HOUSE AT GOLDSTONE

HR AMSAT NEWS SERVICE BULLETIN 089.05 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 30, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-089.05

On Saturday, April 19, 1997, JPL will partner with AlliedSignal Corporation to host an Open House at the Goldstone Deep Space Communications Complex. No sign up, or registration is required. This event is open to the public. At the Goldstone Complex Guard Gate, visitors will be directed to parking areas, and transportation to antenna sites will be by bus.

First stop will be at the Mars site to see the 70-meter antenna
and view the mission operations room. Safety regulations do not
permit public access to the antenna pedestal or dish.

Next, the bus will drive visitors to the Apollo site. Here there
will be public access to the pedestal of one of the new 34-meter
Beam Wave Guide antennas. JPL planetary missions will also have
exhibits in this area.

The bus then returns guests to the main Echo site for other
displays, exhibits, demonstrations, and a video screening. The
cafeteria will be serving light meals and drinks, and souvenirs
will be available for purchase.

During the Open House a special event will be staged to dedicate
the three new 34-meter antennas at the Apollo site. Representatives
from the contracting companies who erected the antennas will be
joined by members of JPL's management in a short ceremony of
official dedication to be held at 1:00 p.m..

For updates, see the DSN OUTREACH web site at
http://deepspace.jpl.nasa.gov/dsn/dsn_outreach.html

A map giving directions to the Goldstone Deep Space Communications
Complex is available as a link from that site, or directly at
http://deepspace.jpl.nasa.gov/buttons/map_gdscc.GIF

[ANS thanks Eric Archer, N6CV for this update.]

SB SAT @ AMSAT $ANS-089.06
P3D LATEST

HR AMSAT NEWS SERVICE BULLETIN 089.06 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 30, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-089.06

Dick Jansson, who has been in Europe for the past two weeks reports a
second-in-a-row successful load test of the Phase 3D SBS, the
structure which houses the satellite as it rides the launch vehicle.
This test confirmed the lateral stiffness of the SBS. This means, Dick
commented, that the P3D-SBS has met all of its *original* load carrying
requirements for a passenger payload.

[ANS thanks Dick Jansson WD4FAB for this good news]

SB SAT @ AMSAT $ANS-089.07
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 089.07 FROM AMSAT HQ
SILVER SPRING, MD, MARCH 30, 1997
TO ALL RADIO AMATEURS BT

BID: $ANS-089.07

MIR:
(New frequencies implemented 1 January 1997:
Uplink 145.2 MHz FM Downlink 145.8 MHz FM)
Note, the above split is used for both packet and voice operation.

SAFEX, MIR 70cm Repeater
(Uplink 435.750 MHz FM, Downlink 437.950 MHz FM,
Subaudible tone 141.3 Hz)
The repeater operational and active..

RS-10:
(Uplink 145.865-145.905 MHz CW/SSB, Downlink 29.36-29.4 MHz CW/SSB)
RS-10 is operational.

RS-12:
(Uplink 21.21-21.25 MHz CW/SSB, Downlink 29.41-29.45 MHz or
145.91-145.95 Mhz CW/SSB)
The sat continues to provide excellent downlink signals in both T-
and K-mode.
[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Be aware that RS-15 has battery charging problems. When the satellite is
in the dark it has low output power..
[ANS thanks Geoff Perry for this report.]
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
RS-16's 70 cm, 435.504 Mhz beacon on RS-16 operational.
The 10 meter beacon is not active at this time. Transponder is not
operational.
[ANS thanks WT0N for this report.]
The March 29th 1520Z pass yielded the following results. The 435.504 Mhz
beacon on. S9+20 here in Roanoke, Va. The following data was being send
down via the beacon; RS-16 P167,0218,n45,m0,l0,k7,j5,i7,h49,g0,f164,e8,
d8,c9,b9,a8.
[ANS thanks Bernie Hall, WY4D, for this report.]

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9
MHz CW/USB)
Operating normally. Strong downlink signal.

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK.)
KO-23 operating normally.
.
KO-25:

(Uplink 145.980 MHz FM, Downlink 436.5 MHz FM,
9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27:
(Uplink 145.85 MHz FM, Downlink 436.8 MHz FM)
Operating normally and lots of activity heard over
North America and Europe.
As of March 30, 1997

Tepr 4 = 32 counts 16 Minutes
Tepr 5 = 66 counts 18 Minutes

AO-27 Will turn on Every pass 16 Minutes after entering the sun and will stay on for 18 minutes. This corrects the early shut off that has been going on for the passed few weeks.

Northern Stations will see the satellite turn on after AOS for the next week or so. This is due to the TEPR states being calculated for a while from now instead of Today. So the schedule will be drifting into a better state. This gives us a longing time before the schedule gets out of whack.

Thanks goes out to the Alternate Control Station KM4NZ/N1XAU for the use of their station via the Internet for Controlling the satellite. With new software that lets me control the satellite at remote sights, I hope to be able to keep the TEPR Schedule more up to date.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, and Miguel A. Menendez, EA1BCU, for this update.]

FO-29
Voice/CW
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Digital
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600 baud BPSK)
The latest FO-29 Schedule can be found at.
http://www.kt.rim.or.jp/~jr1nvu/eindex.html

[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

PACSAT (AO-16)
Russ Platt WJ9F, AO-16 Command Team , reports the digipeater on AO-16 has
been on for the last couple of months. In regards to the 2.4 GHz
transmitter, it does continue to work although WJ9F has not been leaving
it on for an entire orbit due to its high current load on the 10 v bus.
The battery charging scheme on the micros is managed during sunlight
by adjusting the RCPSK transmitter power up or down to charge and
not overcharge the batteries since we have no way to turn the solar
cells off. The S-band transmitter does not have the ability to vary
its output so it is a high current draw throughout the orbit. In the
past during Experimenters Days when we have turned on the S-Band
transmitter I had to scale back the output of the RCPSK transmitter
to levels that were difficult to receive and even with these low levels
the onboard software will still turn off the S-band TX if the Battery
voltage drops too low, which it did. I guess that's why we called them
Experimenter's Days! In the future I do plan to continue to turn on the
S-band TX as power allows. I hope this answers your questions.
[ANS thanks Russ Platt WJ9F, AO-16 Command Team for this report.]

DO-17(DOVE)
(Downlink 145.825 MHz FM, 1200 Baud AFSK.
Beacon 2401.220 MHz.)
DOVE is transmitting on 2M and on S-band 2401.220 MHz.
The command team is keeping the S-band transmitter on as a
test signal for those working on getting S receive equipment going.
The S transmitter is running about .8W to a whip that sticks out the top of
the satellite near one edge. In the northern hemisphere the whip is
pointed away from the earth, it's toward the earth in the southern
hemisphere. It is quite loud with a typical satellite S-band receive
setup, but in the northern hemisphere it will fade as much as 20 dB with
rotation of the satellite. Doppler of course is large, approximately
100 KHz during a pass.
[ANS thanks Jim white, WD0E, DO-17 Command Team, for this news.]

WEBERSAT (WO-18)
(Downlink 437.104 MHz SSB, 1200 Baud PSK AX.25.)
Webersat (WO-18) is currently in MBL mode after last weeks system
crash. The satellite appears to be in good condition broadcasting
MBL telemetry.

The track record is getting worse for the industry as a whole. Look at the last few Russian and Chinese attempts. And the U.S. just toasted its first GPS IIR bird 13 sec into the launch. You're looking for more customer service than anyone in the industry can provide right now, and at cut rate prices. It simply is not realistic. And the technical requirements to work the mating to/deployment from another launch vehicle are most decidedly non-trivial. Even were we able to find a replacement, I don't think we'd be ready to launch before the slipped Arianne-V window in Sept.

For what it is worth, I have put together a few pages on amateur radio
satellite communications.
(Focusing on RS-10 for now)

I designed it for the "newbie" into the ham sats.

I have a few sound clips that I have recorded from RS-10 and RS-12.
The basic shack description, pictures, and info on
the ever popular question:

"can you use a FM HT on the RS-10 satellite?"

I also have links to some of the other good satellite stuff on the web.
Take a look if you like.
If you don't, then please disregard the post.

Apologies for the wrong URL. So much for quick cut and paste without double checking. Yes, this is where I got the WXSAT program. I actually record the .WAV file using another program, but I process it using WXSAT. It is AMAZINGLY SIMPLE and produces excellent results. I find WFM mode on the R7100 to be best, and I can post-process the output using a program like PhotoStyler, etc. to tweek contrast. I'll soon have some sample results posted at http://ourworld.compuserve.com/homepages/ledlow.

There still IS a HF weather fax on 8080KHz right?
I cant find it on my SW rx or the Drake twins (then again, i wont comment on
the twins...)
Also, is there another fax freq. somewhere in the HF?

thanks!!

DAvid *still pissed at the fact that getting on p3d is expensive*

SB SPACE @ ARL $ARLS010
ARLS010 SAREX aboard STS-83; launch set for April 3

ZCZC AS10
QST de W1AW
Space Bulletin 010 ARLS010
From ARRL Headquarters
Newington, CT March 31, 1997
To all radio amateurs

SB SPACE ARL ARLS010
ARLS010 SAREX aboard STS-83; launch set for April 3

The Space Shuttle Amateur Radio EXperiment--SAREX--will be aboard when NASA*s STS-83 mission accelerates skyward April 3 at 1901 UTC. Eighteen schools, including institutions in the People*s Republic of China and on Okinawa, have been scheduled for SAREX contacts during the mission. Three hams will be aboard the shuttle Columbia. They are James D. Halsell, KC5RNI, mission commander; Janice E. Voss, KC5BTK, payload commander; and Donald A. Thomas, KC5FVF, mission specialist. STS-83 is scheduled to last 16 days. The mission will carry SAREX configuration C: voice and packet. The mission*s primary payload is the microgravity science laboratory.

Schools selected for STS-83 SAREX contacts are: Alvin C. York Agricultural Institute, Jamestown, Tennessee; Artesia Public Schools, Artesia, New Mexico; Beau Chene High School, Arnaudville, Louisiana; Center Street School, El Segundo, California; County College of Morris, Randolph, New Jersey; Crittenden Middle School, Mountain View, California; Edgewater High School, Orlando, Florida; Ione Junior High School, Jackson, California; Lawrence Intermediate School, Lawrenceville, New Jersey; Lester Middle School (Department of Defense Dependents Schools, Pacific), Okinawa, Japan; Lexington Traditional Magnet School, Lexington, Kentucky; Mountain View Elementary School, Prescott Valley, Arizona; Public School No. 9, New York, New York; Robert J. Burch Elementary School, Tyrone, Georgia; S. J. Davis Middle School, San Antonio, Texas; Sonny Carter Elementary School, Macon, Georgia; Troy Intermediate School, Troy, Texas; and Tsinghua University, Beijing, Peoples Republic of China.

The SAREX Working Group has designated the following frequencies during the STS-83 mission:

FM voice downlink (worldwide): 145.55 MHz
FM voice uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz

FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz

If packet is available, the FM packet downlink will be 145.55 MHz; the uplink will be 144.49 MHz. The FM packet call sign will be W5RRR-1.

The SAREX hardware will be flown in configuration B, voice-only, battery operation, since no shuttle power could be spared for SAREX on this mission. The SAREX equipment aboard STS-83 includes the Motorola 2-meter FM hand-held transceiver, 15 spare batteries, the window antenna, SAREX headset assembly, personal recorder and the required interconnecting cables.

The SAREX team is also flying the Heathkit packet radio TNC for possible use later in the flight. If power conservation measures are successful, the mission control team will advise SAREX and the astronauts to initiate use of the packet radio system, which also includes one of the Shuttle Laptop computers.

Reports and QSLs go to ARRL-EAD, STS-83 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information: STS-83, date, time in UTC, frequency and mode (FM, voice or packet). You must also include an sase using a large, business-size envelope if you wish to receive a card.

1119. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1997-04-01 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5hprfs$m6h@blackbird.afit.af.mil>
Source record: 19323

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

I have never worked an AMSAT satellite because the gear required costs
too much. I work only RS-10, RS-12, and RS-15. When AMSAT puts up
a bird I can use, I won't be cheap.

Do you have any idea how I can contribute to the Russian Amateur
Satellite Program?

Only part-time. I'm not sure of the hours. 3357 and 10865 (if I recall)
have some action, too.

Try:

http://ourworld.compuserve.com/homepages/HFFAX/hffax.htm

for a good listing of frequencies and times.

Wow, been digging in the archives. eh? P3D has a 10x larger power
budget than AO10 or AO13, but I think you'd be hard pressed to work
it using omni antennas when it is at apogee. I understand that it
is planned to be active on more than one mode at once, so the larger
power budget will be shared across more than one transponder at a
time. And while greater output power will make it somewhat easier
to hear, extra power supply at the satellite doesn't make it hear
you any better.

It is supposed to be 3-axis stablized, so squint angles shouldn't
be as much of a problem as they are for AO10, and were for AO13,
but I don't think that will be sufficient to allow you to work
it without a steerable gain antenna at your station. (At perigee,
of course, it should be possible to work it with an omni, but it
won't dwell at perigee long, and coverage will be much less than
when it is at apogee and a whole hemisphere will be in its footprint.)

It shouldn't take quite as elaborate an antenna system to work
P3D as it does to work AO10 (or did to work AO13). Fairly compact
beams should suffice. You shouldn't need anything like the 22 el
2m and 40 el 70cm long boom antennas I'm using for AO10. An 8 el 2m
and a 16 el 70cm antenna should do nicely (that's for CP, halve the
number of elements for linear polarization). That's a boom length
on the order of 6 feet. If you're running a good amp and have a
good mast mounted preamp, you might get away with even smaller
antennas, say a nested quad backed by a reflector screen (but
with decent antennas you shouldn't need to run an amp at all).

You shouldn't have any trouble setting up a workable antenna system
on a patio or balcony. You can cheaply build the antennas needed.
And as I noted in my original post, you can hand steer the antennas
as long as you aren't trying to work perigee passes. The molynia orbit
has a very long dwell at apogee so you don't have to reposition very
often.

The real digital action may be up at S band, and the needed antenna
for that can be quite small. A 1 to 1.5 meter dish should be plenty,
and that's easily handled on a tripod. You might even be able to
dual feed it and use it at L band as well. If not, a modest loop
yagi will do for L band. (I'll be using my 12 foot dish, because
I already have it, but I'm going to have to throttle power *way*
back to avoid being too strong at the satellite.)

P3D is going to be much easier to work than our previous molynia
orbit birds, but don't expect to work it at apogee with a microsat
class station. You'll want a receive antenna with a narrow enough
beamwidth to keep the warm Earth from affecting system noise
temperature (otherwise a low noise preamp will do you no good),
and you'll want a transmit antenna with enough gain to avoid having
to run an external amp. With my current setup, I expect to be using
less than 2-10 watts uplink power for mode U/V (the higher power may
be needed to burn through the treeline for near horizon passes). With
lesser antennas, you may need 25-45 watts uplink power.

The receive setup is really the key, however, as it always is with
satellites. You simply *must* have enough directivity to let the
antenna look at the cold sky. Otherwise system noise temperature
will be limited by the warm Earth, and you won't be able to compensate
by adding more preamplification. An antenna with a 3 db beamwidth of
22 degrees, and a good F/B ratio, should suffice for high passes.
A narrower beam will be needed for near horizon passes.

Personally, I can't financially support ANY organization that insists on using inferior product. I am speaking about the Ariane 5 launch vehicle. The first one blew up, and the others that had space on the second launch pulled-out. One would think that Amsat would have learned over the years that the ESA does not have the world's best reliability for launch vehicles (anybody remember the early Oscars? The ones that were lost because the launch vehicle - Ariane - went into submarine mode?). I know where of I speak, having worked in the satellite business (RCA and it's successors) for the last 13+ years. When they see the light and use another launch vehicle, THEN I'll support them (Amsat).

Traditionally, there has always been a 10dB discrepancy between
"AMSAT-promised minimum ERP" and realistic minimum ERP. This, of course,
mostly was because of the AGC action caused by alligator stations,
and on P3D the situation might be better because of the countermeasures.

Of course, directional antennas are always better because they help to
reduce noise as well. You can compensate the gain you get from the
antennas by using less output power.

INDIANA REPEATER/ATV/GPS PACKET BALLOON LAUNCH
WINDTRAX-11

Region: West Central Indiana

Date/Time: Saturday, April 5 / 7:00-8:00 AM Indiana
Time, 12:00-13:00 UTC

Location: Roachdale, Indiana (about 33 miles west
of Indianapolis) at North Putnam County
Middle School

Other states where Illinois, Michigan, Ohio, Kentucky,
the signals will Missouri
reach easily:

Site Coordinates: for initial antenna heading -
39 degrees 47.46" North Latitude
86 degrees 48.05" West Long.

ATV: 439.25 MHz AM NTSC from one color
and one b/w cam; WB8ELK color graphics
generator (1.5 watts, vertically
polarized)

VHF/UHF Repeater: Input - 144.30 MHz FM
Dual Output - 444.85 MHz FM (100mW, VP)
- 52.525 MHz FM (50 mW, VP)
Voice ID

Telemetry: 446.00 MHz FM AX.25 1200 baud packet
GPS/APRS position data (750 mW, VP)

HF Net: 3.869 - 3.871 Mhz SSB
VHF net: 147.33 Repeater (Putnamville)
(both beginning 11:30 UTC)

Amateur CW/Voice Satellite Frequencies as of April 1, 1997.

Name Mode(s) Frequencies Beacon(s)

AO-10 B Uplink 435.030 - 435.180 CW/LSB
Downlink 145.975 - 145.825 CW/USB 145.810 CW

RS-10/11 A Uplink 145.865 - 145.905 CW/USB
Downlink 29.360 - 29.400 CW/USB 29.357 CW

RS-12/13 KT Uplink 21.210 - 21.250 CW/USB
K Downlink 29.410 - 29.450 CW/USB 29.408 CW
T Downlink 145.910 - 145.950 CW/USB 145.908 CW

RS-15* A Uplink 145.858 - 145.898 CW/USB
Downlink 29.354 - 29.394 CW/USB 29.3525 CW 29.3987 CW

RS-16* A Uplink 145.915 - 145.948 CW/USB 435.504 CW 435.548 CW
Downlink 29.415 - 29.448 CW/USB 29.408 CW 29.451 CW

FO-20 JA Uplink 146.000 - 145.900 CW/LSB
Downlink 435.800 - 435.900 CW/USB 435.795 CW

AO-27 J-FM* Uplink 145.850 FM
Downlink 436.800 FM

FO-29* JA Uplink 146.000 - 145.900 CW/LSB
Downlink 435.800 - 435.900 CW/USB 435.795 CW

MIR Simplex Uplink 145.200 FM
Downlink 145.800 FM

SAFEX Repeater (Mir)
Uplink 435.750 FM subaudible tone 141.3
Downlink 437.950 FM

SAREX Simplex (Space Shuttle)*
Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

---
* Radio Sport-15 has battery chargeing problems therefore the transponder
and beacon are silent when the satellite is in darkness.

* Radio Sport-16 currently has it's Mode A transponder turned off. The
ground controlers seem to be experimenting with the various beacons,

therefore it is difficult to predict which will be on.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Digital mode until April 4. Here is the latest schedule:

Apr. 1(Tue) 00:28z JD 9600bps
4(Fri) 01:14z JA
11(Fri) 10:16z JD 1200bps
18(Fri) 00:46z JD 9600bps
25(Fri) 01:24z JA
May 2(Fri) 10:26z JD 1200bps
9(Fri) 00:57z JD 9600bps
16(Fri) 01:35z JA
23(Fri) 00:29z JD 1200bps
30(Fri) 01:07z JD 9600bps

* STS-83 is scheduled to launch on April 3rd, 1997 at approximately 2:01 p.m. EST (1901 UTC). The launch window is 2 hours 30 minutes long. STS-83 will include a SAREX package.

CALL SIGNS:

James D. Halsell, Commander, KC5RNI
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF

QSLs: Send reports and QSLs to ARRL EAD, STS-83 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-83, date, time in UTC, frequency and mode (FM, voice or packet). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card.

This FAQ is constantly being updated and re-released on a weekly basis on or about Monday. Any constructive suggestions are always welcome.

Sorry, did not receive the start of this thread ... but this statement is
definitely not realistic.
Lauching a satellite is not like riding a coach. You should read a bit
about the work the Phase 3D team had to invest to produce a launchable
solution. For example the adaption ring which is used to mount the sat to
the launcher was a major headache. Changing the launching vehicle would
mean dropping main sections of the investment.
Additionally you will not get a launch fee near the Ariane price anywhere.
This Ariane launch is a high risk test launch. Take the risk and save
money or pay a fortune for a standard launch elsewhere.

> > Also, I don't need to compare the Arianne-4 failure rate to know

As far as I know, they perform pretty well.

Yes, this is the main problem IMHO.

Cheers,
Detlef, DD3XD.

1130. LogSat for Windows, sat tracking software - new beta version

Newsgroup: rec.radio.amateur.space
Date: 1997-04-02 00:00:00 UTC
From: "Roberto f." <roberto@netwide.net>
Message-ID: <01bc3f23$e113aea0$068bd4d0@miseno.netwide.net>
Source record: 19334

Just a quick note to let everyone interested in satellite tracking that a new, fully functional beta version for LogSat Professional for Windows is now available for download at http://www.logsat.com. This release features new, strikingly beautiful, topographical maps.

>Satellite Program?

Fair enough. But it's interesting to note that under your logic the only satellite project I should support is SAREX/MIREX, and the only ham radio band I should be interested in keeping as a ham radio band is the 2 meter band. Why should I care about 70 cm, 10 meters, or any other band I'm not on right now?

I don't think you're correct with your comments that AMSAT-NA doesn't support Mode K and A satellites. There's an excellent book available from your local Martha on how to get started on the Russian satellites. And it continues to sell well, indicating that there is interest in those birds.

The keplerian elements for the RS birds are distributed each week by AMSAT-NA, not to mention WWW resources, AMSAT-BB, and other online resources.

If you want to contribute to the Russian amateur satellites then I'm certain we can find the appropriate contact for you. Or a much closer source to home, SEDSAT, under construction at the University of Alabama Huntsville, will have a Mode A transponder. I'm certain they'd appreciate your financial support too.

Phase 3-D may not fulfill every ham operator's dream of a perfect satellite, but it will increase the capabilities of future amateur satellites, which - in the long run - will benefit all of us.

It is more likely to stop the rocket rolling over. Ariane are always late with new launchers. I thought that was common knowledge.

1134. Please help a new saetllite starter

Newsgroup: rec.radio.amateur.space
Date: 1997-04-02 00:00:00 UTC
From: Rudy Pycke <regie@interpac.be>
Message-ID: <01bc3f3a$e4b8ca60$42144ec2@stedos05.pop>
Source record: 19338

I would like to start up an amateur radio satellite station.
Digital communications and phone are my favorite modes.
I have already a 2m and 70cm crossed yagi and the rotors 5600B from Yaesu.
Before choosing a number of 'boxes' and software solutions, I am looking
for
some good ideas and tips.
Like:
- what is the preferred transceiver: the Kenwood 790 or the Yaesu 736R ?
- is WISP the best software for the job?
- which are at the moment the most interresting trackers?

Can I find the answers in any FAQ ?

73's de Rudy

If you mean wefax(weather fax) they are all over the marine hf bands.
tune up from 8 mhz during the day should find some.

>Jack

Well gee, Jack, if you're willing to pay the difference in launch costs, AMSAT will be happy to use a different launch supplier. But realize that ESA has only had one launch failure with an AMSAT satellite on board, that was P3A, and our ride was *free* on that one because it was a developmental flight. ESA has given amateurs a free (or very reduced cost) ride up until now, as a piggyback payload, and they're only charging $100,000 for the P3D solo launch to GTO. If you know of another launch supplier who'll give us a ride to GTO for $90 a pound, lets hear about it.

The Chinese Long March (which doesn't have a sterling success record) costs 10x as much. Atlas II is even more (and has had failures too). Titan holds the all time record for longest launch delay, 1000 days sitting on the pad before it was ready to go, and Titans have blown up too, and cost even more than an Atlas II launch. And Shuttle is over $20,000 a pound, can't even reach GTO, and has had a spectacular failure of its own. The Russians recently had a blown launch too. Now Proton is about the most reliable launcher in the world, but guess what a GTO flight costs using it? It's quite a bit more than a Long March.

ESA gives amateurs a very cheap ride (way below their cost). The tradeoff for that has been some launch delays, and one launch failure, because we get all the new developmental launches at that price. That's a good tradeoff. We couldn't afford to launch on Atlas, or Titan, or even Proton.

Huh? You can work the microsats with a dualbander, even in some cases
a HT dualbander. If you don't have either of those, a $50 80 watt GE
Exec II or 110 watt Mastr II can make a dandy UHF uplink transmitter.
Use the temperature compensation input of the Icom for doppler tracking
and/or VXO. You've already got the 2m gear apparently if you're working
the mode A birds. Or you can certainly use one of the converter circuits
in the various Handbooks to translate receive down to the HF receiver
you've got to have to work mode A. Antennas are merely a matter of a
wooden 2x2 boom and some aluminum clothesline wire for elements.

If you can't get on the microsats or mode B birds for under $100, you
aren't trying.

1143. FT736R vs. IC821H?

Newsgroup: rec.radio.amateur.space
Date: 1997-04-02 00:00:00 UTC
From: Charlie Hicks <chicks@ix.netcom.com>
Message-ID: <33433298.4A4D@ix.netcom.com>
Source record: 19347

I'm about to invest in a satellite rig. Knowing the FT736R has been one of the primary rigs used, is it still the preferred rig? Can anyone objectively compare it to the updated IC821H?

I would prefer comparison info regarding sensitivity, useable features, etc. I already understand that the FT736 has more band options.

If one had the IC821H, what would be the preferable choice for 1.2 GHz? Thanks....

Hello Wim Van 't Hoog
Microwave is indeed essentially line of sight depending on antenna
heights, power out, receiver sensitivity, atmospheric conditions etc.
There is a "Frequently Asked Question" (FAQ) and 2 other links on
microwave at URL:
http://pw2.netcom.com/~ac6v/pagew.html#MW
Also the library will have numerous books on microwave technology.

Good Luck

<<SNIP>>

Faulty logic. With this logic, why not hitch a ride on a Chinese rocket. Business minds would tell you something of nothing is still nothing. The Ariane program is faulty program, you are risking the whole bird and investment, yet I understand the financial implications. I guess what I am trying to say is NEXT time, maybe a different ride would be in order.

Wow, your message only had something like three carriage returns in it.
Might want to put a few more next time, since otherwise you have lines
that go well off the page.

Anyway, you're not the only Aerospace undergrad here, though I don't
get much time to post to this group.

I'm not sure why everyone tracks satellites. Some people do it in order
to listen to their transmissions, like weather sats. Some people do it
to watch them when they pass over, or to find secret U.S. DoD sats,
whose orbits are kept from us despite the fact that the Russians and
whoever else probably know exactly where they are anyway from doing
the same thing we can.

I track satellites mostly to watch them pass over, to keep up with
manned missions, and just for the heck of it. I'm in the midst
of our orbital mechanics class here right now, so I am beginning to
pick up the math, etc. that allows you to calculate orbits from
observations and such.

So, I guess that's the best I can do to explain it. I've been tracking
sats and such for many years, and will continue to do so. I you
have any more questions, pass them along. CC to email if possible, too.

>
> Yaesu FT736R

Maybe you want to think about the Icom IC-821H (or the 820), which has a higher power output and has a display that shows you the 2 m and 70 cm simultaneously. It also is smaller than the Yaesu (maybe nice if you plan
portable / mobile operation) and has a connector for 9k6 data in-/output which (I think) the Yaesu doesn't have.

But you can add plug-in modules for additional bands to the Yaesu (6 m and
23 cm) which cannot be done with the Icom. Both are ready to be controlled by
your PC, but to my impression, there are more programs for the Yaesu. The Yaesu
has a built-in power supply, the Icom is only for 13.8 V. The Yaesu has VOX and
a notch filter, but to my impression, the Icom is a bit easier to operate
(-> less switches, knobs,...).

I'm not sure if I pointed out all the differences, but I hope at least the
important ones... But I think both are great transceivers, and you won't do
anything wrong in buying one of them.

Hope that helps a bit!

Best 73, Oliver

Only SICH-1 and OKEAN 1-7 are active of those in your list. They are active only when they are over Europe or Asia, so we don't receive them here, and I tend to forget their frequencies. I think they are both on 137.40.

NOAA 12 and NOAA 14 are active continually. NOAA 12 is on 137.50, and NOAA 14 is on 137.62.

NOAA 12 runs close to the terminator, so you will receive it a little before or a little after sunrise/sunset. NOAA 14 passes around 02:00 and 14:00 local time.

Rich

* PHASE III-D LAUNCH DELAY *
============================
In a formal announcement from Paris on March 24th, the European Space Agency (ESA) said that the second test flight of their new Ariane 5 booster has now been re-scheduled from July to mid-September, 1997. It is this flight, Ariane 502, on which Phase 3-D is currently manifested.

According to their latest announcement, this action was being taken by ESA and CNES (the French Space Agency which manages the Ariane 5 program for ESA) in order to "improve (the booster's) robustness, increase the operational margins and allow for degraded operating modes".

In a joint statement a day after the ESA announcement, Phase 3-D Project Leader and AMSAT-DL President, Dr. Karl Meinzer, DJ4ZC, along with AMSAT-NA President Bill Tynan, W3XO, expressed continuing confidence that ESA and CNES will succeed in completing all the tasks necessary for a successful flight test of Ariane 502.

"Naturally, we are disappointed that our launch will not be as soon as we had hoped", said Meinzer. "However, I am pleased that ESA and CNES are taking care to improve the operational margins for the Ariane 5 booster. This action helps give us renewed confidence in the overall probability for a successful launch of our satellite," he said.

Both Meinzer and Tynan emphasized, however, that this launch delay, like the earlier ones, means that the total cost of the Phase 3-D Project will increase significantly. Even before the latest ESA announcement, AMSAT-DL and AMSAT-NA were projecting a combined budget shortfall of about two hundred thousand dollars (US) in the money needed to complete their respective tasks on the project.

"This shortfall can only increase now as a result of this latest schedule change", said Tynan. Both AMSAT leaders urged everyone to continue doing as much as they possibly can to insure the needed funds will be in place for the completion and launch of Phase 3-D.

* HALE-BOPP NEWS *
==========
Completing an unprecedented year-long study of Comet Hale-Bopp using two NASA observatories, the Hubble Space Telescope and the International Ultraviolet Explorer, astronomers report that they are surprised to find that the differences in the nucleus seem to be isolated from each other. They also report seeing unexpectedly brief and intense bursts of activity from the nucleus during the monitoring period. The Hubble observations suggest that the nucleus is huge, 19 to 25 miles (30 to 40 kilometers) across.

The findings, by a team of scientists, led by Johns Hopkins astrophysicist Harold Weaver, are being published in the March 28 issue of the journal Science.

"Hale-Bopp will probably provide the most revealing portrait of the workings of a cometary nucleus since the spacecraft missions to comet Halley in 1986," said Weaver. "This is a unique opportunity; we have never had the chance to examine a comet in this much detail, over this large a range of distance from the Sun."

The key results:

Violent Eruptions on the Comet's Surface

During the course of long-term observations, which began in August 1995, astronomers unexpectedly caught the comet going through a sudden brief outburst, where, in little more than an hour, the amount of dust being spewed from the nucleus increased at least eight-fold. "The surface of Hale-Bopp's nucleus must be an incredibly dynamic place, with `vents' being turned on and off as new patches of icy material are rotated into sunlight for the first time," Weaver said.

A Complex, Mottled Nucleus

To their surprise, astronomers found that water ice sublimates (turns directly from a frozen solid into a gas) at a different rate than the trace ices, implying that those components are not contained within the water on the comet. This conclusion is further supported by Hubble data showing that the rate at which dust left the nucleus was much different than the sublimation rate of water. This result is contrary to previous models for a comet's nucleus which suggest that the trace components, such as carbon disulfide ice, are contained inside of the most abundant ice on the comet, frozen water. As water sublimates the trace components and dust should be released at similar rates, but this is not what Hubble observed.

A Monstrous Nucleus

By studying Hubble Space Telescope images, the astronomers have estimated that its nucleus may be about 19 to 25 miles (30 to 40 kilometers) in diameter. The average comet is thought to have a nucleus of about 3 miles (5 kilometers) in diameter, or even smaller. The comet or asteroid that struck the Earth 65 million years ago, possibly causing the extinction of the dinosaurs, was probably about 6 to 9 miles (10 to 15 kilometers) across.

Because Hale-Bopp was unusually bright when it was still a great distance away, well outside the orbit of Jupiter, it has given scientists their best view ever of the changes in a comet's nucleus as it gets closer to, and is progressively heated by, the sun. Those changes, in turn, provide information about the composition and structure of comets, which are believed to be remnants from the formation of the solar system, about 4.6 billion years ago. Learning more about comets can provide important information about the materials and processes that formed the solar system.

Image files in GIF and JPEG format and captions may be accessed on Internet via anonymous ftp from ftp.stsci.edu in /pubinfo.

1165. Colorizing Weather Satellite Images

Newsgroup: rec.radio.amateur.space
Date: 1997-04-04 00:00:00 UTC
From: mjbrown@aol.com
Message-ID: <19970404232501.SAA12916@ladder01.news.aol.com>
Source record: 19369

I have just posted a tutorial on using Adobe Photoshop to add color to monochrome satellite images. Although I used GOES images in my examples, the same techniques apply to NOAA WEFAX images.

The tutorial is at:

http://members.aol.com/mjbrown

It is in the Satellite and Space Shuttle Image Processing Section.

Enjoy.

>visibility

No, you don't need optical line of sight, but you do generally
need RF line of sight. What this means is that a few trees, bushes,
or wooden buildings in the path aren't critical, and the radio
horizon is roughly 4/3 the optical horizon due to atmospheric
looming at microwave. If you have a granite "cloud" in the way,
however, you're hosed unless you run high power and try for forward
scatter.

>for
>some good ideas and tips.
>Like:
>- what is the preferred transceiver: the Kenwood 790 or the Yaesu 736R ?

This should be a no-brainer. The narrow filters in the 790 can only be used in the main band unit, but that's also the only unit which transmits, so you have to receive satellite on the subband unit without the benefit of good filters. Not good. And the thermal design of the PA is poor, it gets very hot very quickly. And the track tuning doesn't work the way you'd want for tuning the birds.

The 736R is more optimized for satellite operation, the filters work in the downlink channel, and track tuning works the way you'd expect. It's an older design, and you'll need a mast mount preamp (a good idea anyway), but it'll get the job done. The downside to the 736R is that it isn't what we'd call a modern dual band design, IE you can't *simultaneously* receive on both bands. That doesn't matter much for satellite operation, but it is an inconvience for terrestrial operation where you might like to keep an ear on one band while operating on the other. (You can also add a 1.2 GHz module for mode L operation.)

The IC821H also looks like a promising radio, but I don't have any satellite operating experience with it so I can't give any feedback about how well it actually works.

1172. Call for Radio Operators ...

Newsgroup: rec.radio.amateur.space
Date: 1997-04-05 00:00:00 UTC
From: "Mark W. Curtiss" <mcurtiss@excite.com>
Message-ID: <3346A090.2CF@excite.com>
Source record: 19228

Hello all,
On April 13th, Maximov Publications, the International Academy of Astronautics Sub Committee on the Arts and Literature, the OURS Foundation: Ars Astronautica, and the Leonardo Space Arts Working Group are sponsoring the Space Arts Workshop '97 (http://www.maximov.com/mirspaceart.html). Artists and scientists will be speaking on the social and cultural aspects of space exploration. Between now and then, people on the Internet will be submitting questions to the artists and scientists which they will answer in an online arena. We would like to send some of the questions to the cosmonauts aboard Mir and to the astronauts on the Shuttle (STS-83 is a SAREX mission).

If there are any radio operators that are willing to participate, please contact me at mcurtiss@excite.com

.... this does of course assume anyone can get through to them.

Mike Catalanotti wrote:
> Anyone heard packet on 145.800 from MIR over the past week?
> Thanks,
> Mike Cat
> catman@codem.com

The process will occur in the following order ...

1. Internet Users submit a question via the Web site.
2. The question is forwarded to a radio operator
3. The operator makes contact with the space station and/or Shuttle
4. The answer is forwarded back to me and then posted on the Web Pages

I hope this is even possible and I look forward to your comments, questions and participation. I thank you all for your assistance and for the time.

Smiles

1176. Help needed !!!!! (for Satellite Communication)

Newsgroup: rec.radio.amateur.space
Date: 1997-04-05 00:00:00 UTC
From: masa@writeme.com
Message-ID: <3346ceef.275630@news.bctel.ca>
Source record: 19232
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.space

Hello.

I was trying to use a satellite to get the signal out and back, but it
did not work well. I tried many satellites, but none of them seemed
to work at all (I used the software to track down the satellite).

I have a 45W base station + 30cm antenna (it's in inside).

do you have any ideas ? are you usually able to talk to someone
easily over the satellite ?

Thanks in advance.

Earlier I saw a message about someone trying to run a
KCT through a linux box. I too am attempting something
similar.

To the person who posted that message, were you successful?
Let me know and maybe we could compare notes.

Thanks...

COLORADO ATV/GPS PACKET BALLOON LAUNCH
EOSS-29

Region: Central Colorado

Date/Time: Saturday, April 12 / 8:00 AM Mountain Time,
12:00 UTC

Location: Pike's Peak RC Club airport located east
of Falcon, CO (Falcon itself located
about 15 miles northeast of Colorado Springs;
please see EOSS website for detailed map
graphic)

Other states where Kansas, Nebraska, Wyoming, Utah, Arizona,
the signals will New Mexico, northern Texas, and western
reach easily: Oklahoma.

Site Coordinates: for initial antenna heading -
38 degrees 57' 17.65" North Latitude
104 degrees 30' 4.43" West Long.

ATV: EOSS Shuttle Video - 426.25 MHz AM NTSC
video (1 watt)

Beacon: 144.34 MHz Morse ID audio on FM
(periodic; frequency shared with packet
telemetry)

Telemetry: 144.34 MHz FM (1 Watt output) - AX.25, 1200
baud mostly plain english text; includes APRS
position data string

HF Net: 7.235 MHz

VHF nets: Preflight Foxhunter Net 8:00 PM the
preceding night, 147.225 MHz, Colorado
Repeater Association

Launch Site at about launch time
146.55 MHz simplex

Foxhunters: 448.45 MHz Pikes Peak FM Association Repeater
146.58 MHz simplex field frequency

Launch data courtesy EOSS via Rick von Glahn
rickvg@usa.net

For additional launch data and general Edge of Space Sciences (EOSS) information, please see the EOSS website:

http://www.usa.net/~rickvg/eoss.htm

Please email me news of upcoming balloon launches and post-flight reports for distribution on the Net, and please check out the High Altitude Balloon Launch Information Center (HABLIC) website for collected launch information presented in a uniform format.

If you have a line of sight (LOS) path, you can communicate with very low power (typically milliwatts). However, if you have 20 .. 30 dB more power than required for LOS communication, you can also use quite a few non-LOS paths.

Microwaves will reflect quite effectively from buildings, sneak trough windows and small openings etc. You can communicate quite effectively over non-LOS paths in cities, since the signal will propagate trough multiple reflections from buildings. However, since the signal usually arrive through multiple paths, you have a severe multipath situation, when different paths sometimes cancel each other, sometimes they are summed. For communication between stationary stations you need some kind of wide band modulation (e.g. some kind of spread spectrum) to avoid multipath nulls. Mobile communication can be done with ordinary narrow band FM, since the path lengths are constantly changing, so you get a very rapid mobile flutter (Reyleigh fading), but it does not affect readability very badly. For some strange reason, there is always a null in front of the traffic light and you usually stop at that position :-).

While microwaves are effectively reflected from buildings and other hard structures, it is quickly absorbed by large vegetation and a hilly terrain.

If you have plenty of power and high gain antennas, you can beam the signal just over the horizon and it will be scattered in the troposphere, just like the sunlight is scattered just before dawn.

Paul OH3LWR

Well, they are having some trouble up there so maybe they've taken it off
the air for now until (hopefully) they can resolve the problems.

I am trying to compile SatTrack on a RedHat Linux 4.1 system and am getting errors. I could post my Makefile and the compile errors I'm getting, but first I thought I'd check if there are known problems with the X libraries.

Better yet, is there an RPM somewhere for SatTrack?

Radio Meteor Observation Bulletin No. 44 April 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 deg (= E),
elev 27 deg
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

March 1997

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

```
-----------------------------------------------------------------------
Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 30 deg
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic E.

Pierre De Groote

Observer: Chikara Shimoda
Location: Asahi, Nagano, Japan (137 51' E, 36 07' N)
Frequency: 81.4 MHz
Transmitter Location: FM-Japan 81.3 MHz, 10 kW, distance 180 km
Antenna: 5 element Yagi directed to the zenith.
Receiver: AM-FM Tuner (TRIO KT-1100)
Observing method: Meteor echoes output from center-tuning meter were recorded on a pen-recorder chart.

2. ANNOUNCEMENT

Pierre De Groote informs us that the currently used frequencies by the Polish FM stations can be found at:

http://student.uci.agh.edu.pl/~wojcikgr/radio.html

This should be helpful for finding remaining suitable frequencies in the 66-73 MHz FM band (which is abandoned gradually).

3. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio

and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

(Worldwide) Downlink 145.55 FM

---
* Radio Sport-15 has battery chargeing problems therefore the transponder
and beacon are silent when the satellite is in darkness.

* Radio Sport-16 currently has it's Mode A transponder turned off. Some
activity over Europe was reported but uplinking via Mode A was not

possible. The speculation is that the activity may have been the ground controllers conducting tests. I would appreciate any reports for future updates.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until April 11. Here is the latest schedule:

Apr. 4(Fri) 01:14z JA
11(Fri) 10:16z JD 1200bps
18(Fri) 00:46z JD 9600bps
25(Fri) 01:24z JA
May 2(Fri) 10:26z JD 1200bps
9(Fri) 00:57z JD 9600bps
16(Fri) 01:35z JA
23(Fri) 00:29z JD 1200bps
30(Fri) 01:07z JD 9600bps

* Mir Simplex and SAFEX have been reported to have been curtailed until certain undisclosed repairs to the Mir complex can be completed. No activity has been reported over Europe or North America for several days. I would appreciate any activity reports for future updates.

* STS-83 mission is being cut short due too problems with a faulty fuel cell on board Columbia. Columbia will return to Earth Tuesday April 8th.

CALL SIGNS:

James D. Halsell, Commander, KC5RNI
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF

QSLs: Send reports and QSLs to ARRL EAD, STS-83 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-83, date, time in UTC, frequency and mode (FM, voice or packet). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card.

This FAQ is being updated and re-released on a weekly basis on or about Monday. Any constructive suggestions are always welcome.

For Sarex the downlink is 145.550 and there are 5 uplinks picked at random
by the crew:

144.910
144.930
144.950
144.970
144.990

For the packet robot:

Uplink: 144.490
Downlink: 145.550

MONDAY APRIL 7, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* THE STORY BEHIND MEXICO-OSCAR-30 *
====================================
Dr. Tom Clark, W3IWI has cleared much confusion regarding the status of the
MEXICO-OSCAR-30 satellite launched last year. The satellite with the 40 MHz
meteor RADAR was built at UNAM (The Autonomous University of Mexico) in Mexico
City by XE1TU and his students. The basic spacecraft was of the same design
as the other AMSAT Microsats, including LUSAT, DOVE, WEBERSAT, ITAMSAT and
EYESAT.

Many will recall that the first UNAMSAT was destroyed (along with the
Israeli TECHSAT satellite) when the Russian START launch vehicle exploded
shortly after the launch from Plesetsk.

A new UNAMSAT satellite, which later became known as MEXICO-OSCAR-30, was
built from spare parts and launched late last summer on a different launch
vehicle also from Plesetsk. The satellite successfully reached orbit and
transmitted telemetry for about one day.

The weather at the launch pad the day MO-30 reached orbit was very cold.
The satellite separated from the launcher at a temperature of about -30 C.
It is believed that the frigid temperatures prevented the first local
oscillator of the satellite's uplink receiver from oscillating, rendering
the satellite totally deaf. With no functioning uplink receiver, battery
charging parameters suitable for the unanticipated cold temperature could
not be loaded, and the satellite ran out of power.

Later attempts to revive MEXICO-OSCAR-30 have been unsuccessful.

[Info via Dr. Tom Clark, W3IWI]

* AO-27 NEWS *
==============
As of March 30, 1997:

TEPR 4 = 32 counts 16 Minutes
TEPR 5 = 66 counts 18 Minutes

AO-27 will turn on every pass 16 minutes after entering the sun and will stay on for 18 minutes. This corrects the early shut off that has been going on for the past few weeks.

Northern stations will see the satellite turn on after AOS for the next week or so. The schedule will be drifting into a better state over time.

Thanks goes out to the Alternate Control Station KM4NZ/N1XAU for the use of their station via the Internet for controlling the satellite. With new software that allows control of the satellite from remote sights, Michale, N4USI hopes to be able to keep the TEPR schedule more up to date.

[Info via Michael Wyrick, N4USI, AO-27 Control Operator]

* AO-10 ORBITAL DATA *
======================
Ken Ernandes, N2WWD, has reported that the Space Command has published a new Kepleriann data set for AO-10. They are as follows:

AO-10
1 14129U 83058B 97086.09215926 -.00000160 00000-0 10000-3 0 4644
2 14129 25.6368 156.5618 6073912 102.9697 328.9901 2.05881543 75687

Ken reports that this element set compares favorably with the estimated set (epoch 97054.5) with the exception of about a 0.6 degree shift in orbital plane.

* FO-29 DIGITALKER ACTIVE *
===========================
The JARL FO-29 command station has announced that FO-29 will be placed in Digitalker mode between April 4th and 7th.

[Info via Kazu Sakamoto, JJ1WTK]

* RS-16 NEWS *
==============
RS-16 was launched as part of a compound satellite package called "Zeya" named after the launch site at the Svobodny Cosmodrome by the banks of the Zeya river in the Far East by the Chinese border. Being that this was the first launch from this launch site, no expensive satellites were launched. RS-16, however, was an ideal candidate for the maiden launch.

In addition to the RS-16 package, the Zeya spacecraft consists of an experimental navigation system of the GLONAS/GPS "Terminator" series, a number of experimental reflectors, solar panels and batteries.

RS-16 has high speed telemetry as well as Morse CW, but it is proving difficult to copy due to the tumbling and toppling QSB of the satellite. In fact, amateur radio operators are doing somewhat better than officials who need the telemetry for their own readings, but who have receivers rather less sensitive than the amateurs.

There are just two of the RS group working at the Ground Control Center near Moscow (the same as the GCC for RS-14/AO-21), these being Alex Papkov RA3XBU and Victor Samkov. There is no amateur command station as such, but Alex and Victor are working with the military and factory staff in checking the facilities, antenna, equipment etc., and planning for various scientific programs.

Leo, UA3CR, suspects spurious signals +/- 30 kHz either side of the beacon, but thinks it may be due to overload from strong local QRM at his QTH. He asks that amateurs look for them.

Leo reported that RS-16 is undergoing testing now, the duration of which may take two or more months. It is believed the Mode A transponder will be switched on after testing is complete.

[Info from Leo, UA3CR via Pat, G3IOR]

Wow... entering the sun, and still staying on for 18 minutes? I thought
they could only do that in Startrek. Doing that on every pass is even
neater. ;)

I'd also like to take this opportunity to express my gratitude to you,
John, for this great bulletin of yours.

Regards, Paul Boven.

Source record: 19256

Most probably know by now, but in case you don't, the STS-83 shuttle mission will be ending early, tentatively scheduled to return to earth on Tuesday, April 8. Reports are that one of the 3 on-board generators has failed, and has been shut down. NASA rules require that unless all 3 are functioning, that the mission be aborted.

The crew have cut a number of lights to conserve power while they rush to complete the experiments that they can in the shortened time.

I'd take a guess that with their busy schedule and shortened mission, that no SAREX contacts will be made (if they hadn't already made some.)

1204. Re: information

Newsgroup: rec.radio.amateur.space
Date: 1997-04-08 00:00:00 UTC
From: Brandon and Kristin <illusions@enterprise.net>
Message-ID: <3349F7DE.6D11@enterprise.net>
Source record: 19258

The equipment you will need greatly depends on what sort of a
shot you will be setting up. You will most likely be doing a LOS
connection
as the only other alternative is what's called a TROPO shot. That's a
link
that's actually bounced off of the Troposphere and back down to the
earth.
Generally, these shots can run anywhere from 100 to 300 miles depending
on
your equipment and how much output power you are giving it (typically
1000
to 10,000 watts!) The only place I have heard of TROPO shots being used
is
in the military.

On the dish, yes, you will generally only need one - with a circulator -
to
allow you to tx and rx with the same dish. Some systems use two dishes
at
each site for what's called "diversity". There are two types of
diversity;
space diversity and frequency diversity. I could go on all day
explaining
these, but I think it would be better for you to look them up as there
is a
lot of information to digest. The gist of diversity is the information
is
transmitted on more than one different frequency or polarization to
ensure
the best signal is received at the other end.

On getting 10Ghz components, try any RF equipment supplier. Be warned
that
high frequency RF equipment is VERY expensive. You may be able to buy
good
used equipment if you ask around.

I would like to know what sort of project you are doing. If you have any
more questions, I will be happy to help.

Please send them to my home address : illusions@enterprise.net

Have a good one.

Brandon

Gary,
Thanx for the info. The Yaesu brochure doesn't give a detailed
explanation of how 736R tuning works. Is it possible to track
the transmitter and receiver (one on 2 the other on 432) with one
tuning knob, and then decouple the two to correct for doppler
shift by tuning only one -- either the tx or rx. If so, can
it do this even when working through an inverting transponder ?

Tnx, Ken AC1H

And the thing is that this $500000000+ could have been avoided. These fools
had indications that the crap would hit the fan (if there was enough power to
run the fan) before lift off. Mine and your tax dollars up in egosmoke.
I enjoy the space effort and science more that anyone BUT nasa is getting out
of hand 'again'. What next? BAD O rings?

Maximov Publications and Leonardo

announce

Space Arts Workshop '97

On April 13, 1997, a select group of artists and scientists from around the world will be gathering in Paris, France to discuss the social and cultural aspects of exploring space.

Seventeen individuals will be presenting their works of art, speaking as artist as space explorers. Among these people, is artist Arthur Woods whose work, "Cosmic Dancer" flew aboard the Mir Space Station. Also speaking will be Richard Kriesche, artist of the first art project in the history of the Russian space flight, to fly aboard the space station Mir (1991).

The event will be broadcast over the Internet via Maximov Publications Special section on the Mir Space Station (http://www.maximov.com/Mir/). You can view the preliminary pages at

http://www.maximov.com/Mir/mirspaceart.html

The space arts meeting is being organized by ars astronautica, Leonardo - the Journal of the International Society of the Arts, Sciences and Technology, Maximov Publications, and the OURS Foundation.

Workshop members will go online to answer questions from users (April 13, 1997 at 4PM to 9PM GMT).

During the event, Amateur Radio Operators around the world will be relaying questions to cosmonauts aboard the Mir Space Station. In order to get the questions to amateur radio operators we are asking for submissions before April 13th.

*** CALL FOR QUESTIONS ***

We are requesting questions for both workshop members and cosmonauts. Please submit your questions to Mark W. Curtiss via email (mcurtiss@excite.com) or via the online form (http://www.maximov.com/Mir/mirspaceartstalk.html). Results for these pages will remain posted at this site for future reference.

Thank you

Later today (Tuesday/ 4/8) an unmanned spacecraft carrying supplies and equipment will dock with the Russian space station Mir. In addition to food and other necessities, the progress spacecraft is carrying equipment for making repairs to two failed systems on board the station.

The Station was reorientated after a cooling loop failed last week. This along with the other problems should be fixed during this week, allowing for contact with Mir.

Smiles

Where'd you get the hair-brained idea that NAY of the frequencies are anything BUT public knowledge. Granted, you have to do some digging to find a couple of them, but they are NOT CLASSIFIED! Rest assured that if they were, every PHED wothin a 200 mile radius would be at your house right now.

doh. Nothing which travels through the air at the speed of light is a secret.
A simple scanner will pick the signal up in a matter of microseconds. If these
communications are really that secret, dont you think they would be scrambled
and that the frequencies would change on a daily basis?!

If the signals are truly "scrambled" (using adequate encryption methods)
there
would be NO need to change frequencies on a daily basis ... except perhaps
to make it harder for an adversary to jam the transmission by having to
find it
first ...

With proper encryption techniques, one could send the same message every
day for a hundred years and you'd be unable to decrypt it (without the
right
key)
in a dozen lifetimes using all the supercomputers in the world ...

Even PGP, which is a public key system available on the web, is virtually
unbreakable with proper choice of key length ...

1218. Solar flare heading toward Earth (4/9/97, in afternoon EDT)

Newsgroup: rec.radio.amateur.space
Date: 1997-04-09 00:00:00 UTC
From: Mark Ellis <mellis@ramcad.pica.army.mil>
Message-ID: <E8DnCF.7yG@pica.army.mil>
Source record: 19177
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.space

From www.cnn.com:

Solar flare heading toward Earth
Web posted at: 11:09 p.m. EDT (0309 GMT)
(CNN) -- The sun has produced a storm the likes of which scientists have not seen before, according to a NASA researcher.
The large flare of magnetic energy is expected to hit Earth's upper atmosphere Wednesday afternoon, according to Art Poland, senior scientist with the Solar and Heliosphere Observatory (SOHO) at the Goddard Space Center in Maryland.
SOHO is a relatively new NASA satellite that is pointed at the sun.
The solar flare was formed Monday when the sun generated a giant shock wave of electrified gases called a coronal mass ejection. SOHO photographs show "a flare going off; you see a shock wave leaving (the sun). Basically, it's a tsunami going across the surface of the sun," Poland said in an interview with CNN.
Solar events like this occur every day. Approximately one in 10 heads toward Earth. But this solar flare is about as large as one that destroyed a broadcast satellite in January.
There have been 43 cases of satellite damage as a result of solar flares, according to astrophysicist George Lake, a NASA project scientist. The flares inflict damage by sending a powerful current through the satellites, creating "miniature power plants," according to Lake.
Scientists say they don't know exactly what kind of problems this solar event could cause and what is in its path. Solar-monitoring satellites will provide only one hour's notice of the wave's arrival. Similar events have triggered power outages and interfered with spacecraft operations.
"If the magnetic orientation is opposite to the Earth's magnetic field and all the conditions are right -- what that means I don't know, that's what we're really trying to learn -- it could really interfere with the Earth's magnetic field and then have an impact on us," Poland said.
The solar flare will pose no threat to life on Earth, he said.
But "it is the kind of thing that might create some spectacular viewing in the heavens," said Lake. The aurora borealis, or Northern Lights, might appear brighter.
This event apparently is a sign of things to come. Scientists say solar activity will increase and peak in the next four to five years.

1219. SoundCard=WEFAX-FAX-SSTV-RTTY

Newsgroup: rec.radio.amateur.space

Hello fellow WEFAX FAX SSTV RTTY enthusiasts.

I've just updated by FTV program - current release is 0.98f
Download it from http://www.geocities.com/SiliconValley/2504

For the first time, I have released the software as full-featured
shareware.

FTV brings innovative digital signal processing and analysis techniques to
your multi-media PC. It can be used to receive images from Weather
Satellites and Terrestrial Facsimile Stations, text transmissions from
radio telex services, as well as Amateur Radio FAX, SSTV and RTTY signals.
It can also transmit Amateur Radio FAX and SSTV (Slow Scan Television). No
external hardware, other than a radio, is required, as all the necessary
signal processing is implemented in software.

FTV uses a SoundCard to decode:-
WEFAX weather photos from weather satellites
FAX wirephotos and meteorological maps (Supports FAX transmission)
SSTV pictures in monochrome and colour (Supports SSTV and SSTV COLOUR
transmission)
Baudot text (RTTY)

Here is a run down of soem of its hot features:

(1) It keeps the demodulated signal in memory, so that the signal can be
analysed again at a different keying rate or polarity! Garbage can be
resampled on the fly, which means that minutes of received signals decoded
at the wrong baud rate or keying polarity are recovered, on the fly, while
still receiving.

(2) Keying rate and polarity are analysed automatically - standard baud
rates are automatically set following analysis (assuming you have
calibrated your system as described in the documentation file
'readme.txt').

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

Take a look at my web site for futher details, at:
http://www.geocities.com/SiliconValley/2504

What can I say ? Try it, it's free, and may you have as much fun as I am
having...
And, keep me posted... If you have suggestions, you have got to let me

know!

73's from Brian.

Dear reader,

I am looking for someone to help me build/contrcut/fund my radio station. I think its gonna be a priate as soon as I get info about it. I am new at this and would need some help/gudience. Whats alllowed and not allowed? Where could I find a 10 watt transmitter possilbey used? I am emailing a radio station thats big chere in New England because its brodcasted off MT. Washington to see if they have any old equiment to help me out. If any of you can help or give some advice then please feel fre to Email me at: jcox@worldpath.net Pleae donate if possible or of you have some helpful hints I am open!

Thanks!

1222. Re: SoundCard=WEFAX-FAX-SSTV-RTTY

Newsgroup: rec.radio.amateur.space
Date: 1997-04-09 00:00:00 UTC

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up satellite schedules to contact hams all over the world.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

Visit http://www.sarrio.com and estabish your own cybersched

I wrote an article detailing how to compile SatTrack 3.1 on a RedHat 3.0.1
system that was published in the January 1997 issue of the Linux Journal.
If you still haven't figure it all out, or can't find a copy of the
January LJ (it had the "brain" cover art), I might be able to scrounge up
a rough draft on my hard disk somewhere.

MIr has had a fire where they had to abandon the space station and hide in
the soyuz spacecraft
they have docked. , loss of carbon dioxide scrubbers, and a power failure.
The thing is falling apart and they are launching a mission with parts just
to
keep it together.
I'm sure Ham radio is the least of there worries, and it will be some time
before
they have time to play with the radio.

Instantrak is a commercial program. It is _NOT_ freeware or shareware. You can purchase it from AMSAT for $70 ($50 for members). Call AMSAT at 301-589-6062.

Franklin Antonio is the author of the program and has been quite cooperative about providing support and advice on how to get around the few bugs (primarily bugs related to other pieces of operating system or hardware interelating with Instantrack as opposed to any bugs within the program.)

A set of optional utilities are also available.

~~~~~~
Ed,

The K2TL homepage: http://members.aol.com/jkktl/ham.htm has the
program WxSat which uses your soundcard to decode the Polar Orbiters
and Meteosats then displays the WAV file as a BMP. An excellent
compilation of SSTV programs is found at http://www.qsl.net/n9ngf/
Some of the programs are DOS and some are Win95. There are
descriptions and shareware to be downloaded directly from the site.
I'd have to do a search to find some other sources and my
ISP server is running s..l..ooo..ww.. tonight. Just search using
Webcrawler or Yahoo to find SSTV software, RTTY software, and
Wxsat links.

To all of you radio amateurs out there ! A plea for help from
someone bogged down at the moment.
I have obtained the wxsat software which works perfectly with
prepared .wav or .bmp files. I have also obtained a sound card (Idema
sound card series Schubert which is a 16bit ES1868 card) This has been
set up with port 220H, interrupt 10 [to avoid clashes with network card
set to 5] and DMA 1. It is set for wave file processing at 11.025kHz,
mono, 8 bit
No matter how I try I cannot produce a .wav file from the system
even though the input (into the audio plug on the card) produces sound
from the monitor speakers. I can also play CD's via the CD player,
but....NO .wav file at all. I have tried live signals, and recorded
signals all to no avail. I have even tried to contact ESS technologies
in the States by e-mail but have had the message returned with this
address unknown. So at the moment I am having to suck my thumb, mainly
since I am neither a radio amateur or a computer "literate". The
setting up of the system was done for me as I am essentially an amateur
climatologist (retired).
So, can any of you boffins out there throw any light on my
problems and even suggest what I can do to get a .wav signal. Have I
got a duff sound card ??
Thanks for any help or guidance,

Good Day all,
I just got some semi-official confirmation that the space station shut down its amateur radios for energy reasons and that they will probably not come back online for a couple of weeks while repairs are being made. (Keep trying though)
As to the recent launch, this was a scheduled event, regardless of the repair items. It turned out to be good timing for the crew and the station.

Smiles and All

We're the developers of LogSat Professional, a satellite tracking program for Windows. Right now this software is able to control the antenna rotors only using the KCT (Kansas City Tracker) interface card. We are currently adding support for doppler compensation and TrakBox compatibility. We would also like to support the AEA ST1 controller and the SASI tracker.

Is there anyone who has some technical specs on these latter two interfaces and on any drivers/software used to control them? We'd really appreciate any input regarding this matter.

Thank you

To all radio amateurs

SB SPACE ARL ARLS012
ARLS012 SAREX/ARISS attempt to reschedule missed QSOs

When the space shuttle Columbia prematurely came back to Earth April 8, so did the soaring hopes of students and teachers at 18 schools that had been scheduled to talk via Amateur Radio with the astronauts aboard the shuttle as part of the Shuttle Amateur Radio EXperiment, or SAREX. Three hams were aboard STS-83: Jim Halsell, KC5RNI, the mission commander, Janice Voss, KC5BTJ, and Donald Thomas, KC5FVF. The SAREX schedule had included contacts with schools in the People's Republic of China and Japan (Okinawa).

It's not yet known if or when any of the SAREX contacts might be rescheduled on other missions, although NASA has indicated it would like to ''refly'' the entire STS-83 mission--with the same crew--possibly as early as July. The SAREX/ARISS Working Group (SAWG) has requested that SAREX be included if the mission is reflown. In the meantime, the SAWG will be in contact with NASA to find ways to give each school every possible chance to be assigned to future flights.

NASA Payload Specialist Ron Parise, WA4SIR, took time out from his work schedule April 7 at Goddard Space Flight Center to speak with some 300 thrilled students at the County College of Morris in New Jersey, one of the schools on the STS-83 SAREX schedule. Other schools might get a chance at special QSOs with the STS-83 crew members once the crew is back at Johnson Space Center.

At least one of the hams aboard STS-83 managed a few spare moments to turn on the ham gear aboard the shuttle. Al Lark, KD4SFF, of Greenville, South Carolina, was able to chat with Don Thomas, KC5FVF, aboard Columbia on April 5. Rusty Hack, NM1K, in Enfield, Connecticut, also reported hearing KC5FVF aboard the shuttle on the same day, apparently a few minutes after the QSO with KD4SFF. April 5 QSOs also were reported by KA3HPQ and N1JEZ.

In the meantime, four out of a scheduled round of ten MIREX school contacts have taken place so far with ham-astronaut Jerry Linenger, KC5HBR, aboard the Russian Mir space station. At least three more contacts remain on the schedule, with Alaiedon Elementary School in Mason, Michigan, Holy Angels School in Dayton, Ohio, and Jerling Junior High School in Orland Park Illinois. The remaining QSO schedule may be pared back in deference to Linenger's heavy research workload, but efforts are under way to carry out as many of the previously schedule school contacts as possible.

Keep trying! GeoCities has evidently been having some serious problems lately. Last night I couldn't even get to my own page the first time I tried. The problem seemed to come and go every few minutes, or less.

Rumour has it that audio tape recordings wobble the speed (tones)
excessively and prevent decoding. Anyone confirm otherwise ?

Source record: 19206

I need some advice and help setting up my 1st satellite station.
I have a Yaesu FT-736R with FIF-232c interface. Plan to get a Yaesu
alt/el rotor. Have a win95 pentium PC. Would like to run WinTrak Pro
software. I want to control both the radio and rotor via pc software.
WinTrak pro says it works with "Auto Tracker".
What is auto tracker and where do i get it. I guess I am trying to
figure out what hardware I still need to get to run the radio and ant
rotor system. Keep hearing about KC tracker and have no idea what that
is either. Bought the arrl satellite anthology book but it is no help
setting up a station to control radio and rotor. Thank you for reading
this and any help is very much appreciated.

The wow and flutter can have some effect on the picture but if the tape
recorder is of reasonable quality then it should be OK.
I use an old datacorder which came with the C-64 computer and have found
it to be pretty good with SSTV and or FAX pitures when I have used it to
give demonstrations at our local club.

1255. Help with KCT/T, WISP and RR driver

Newsgroup: rec.radio.amateur.space
Date: 1997-04-12 00:00:00 UTC
From: Art Jeyes <chrishil@erols.com>
Message-ID: <334F9A2E.510C@erols.com>
Source record: 19210

I am just getting my sat station back on line after a long
period with a failed rotor...

I got the latest version of WISP, and the recently posted new
modules... installed everything and am having a problem with
tuning...

I am running an ICOM 970, KCT/T, & G-5400B rotor...

I installed the RR Driver and calibrated the rotor/set up the tuner as
instructed...

Everything works using the satdemo program... I can set transceiver
modes, and TX/RX frequencies....

when I run WISP and a pass comes up, everything appears normal, except
that only the uplink frequency gets set on the ICOM, the DL freq does
not get initialized or updated...

I have checked the downlink frequncies in the sat setup dialog of WISP
and they are OK... I also have beacon frequncy set in the satellite data
base to the down link frequncy and doppler looks correct in the GSC
track window...

any ideas on what I am doing wrong would be greatly appreciated...

Thanks & 73
Art -- AA3GU

Vincent,

Before you rallye people to make "demands" of ESA, I would think that you would first be wise to "ASK" the AMSAT leadership if they want a "free building" from ESA?

Simply said, it is not for you or any AMSAT-NA member to make any demands on the European Space Agency. Nor is it proper for you to organize what amounts to a protest action against ESA.

Rather this is a policy decision that has to be made at the highest level of AMSAT leadership starting with AMSAT-DL. As you must know, AMSAT-DL is the organization that is the leader of the Phase IIID project.

You might consider sending your idea as a "formal presentation" to them through the proper chain of command via AMSAT-NA President Bill Tynan, W3XO (w3xo@amsat.org) to see if AMSAT-NA feels that such an idea should be pursued on an international level by AMSAT-DL.

Yesterday I visited the integration facility in Orlando and chatted
with Lou McFadin. During this delay the opportunity is being used to
improve the spacecraft. Things are being check and rechecked and
improvements made. Sure keeping that facility open costs money but we
are going to get a better satellite out of it.

We are going to a GTO for very small percentage of what that would normally cost and people then want ESA to give us more. I wish the original poster would give a little thought before launching out on his suggested course of action.

I heard one of the regular satellite ops comment the he, "wasn't going to pay to support a delay" I was stunned into silence (hard to believe) by that comment. The delay was not AMSATs choice. The same people who busted their tails to build P3D are doing the same during the delay to make it better while a bunch dweebs who did nothing want to sit around and bitch.

I know the interet is a great medium for shooting off your mouth but try thinking guys.

Jerry

A little while back I was looking at a newsgroup and saw a message similar to this. I thought it was a scam, but it wosen't. It said that you send $1.00 to the five names and address bellow then you place your own name at the bottom of the list at #5, and post it to at least 200 newsgroups. (There are thousands) No catach, that was it.

So after I talked to some people I did it. What do I have to lose exept 5 stamps and $5.

Like most of us I was a little skepical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is ineed legal.

My friend has made after 2 weeks 1,000.00 and now on his 4th he has made a total of 42,000.00 and it is still comming in.....

The process is very simple and consists of 3 steps:

step 1:: Get 5 separate pices of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Then get the dollar bills and put it inside the papers and put the papers inside the envelopes. Know you should have five sealed envolops with a paper in each that has the phrase above on it and a dollar bill inside of the paper. Why you are puting the dollar bill in the paper is so it well not be seen.

Mail the 5 envelpoes to the following addresses:

#1 Michael Henry
518 west College Ave.
Salisbury, Md 21801

#2 Kent
27 Vicar Road
Anfield
Liverpool
L6 OBW
England
U.K.

#3 David West
6020 Danube Way
Orlando, Fl 32807

#4 Keith Queen
Room 114
Miami University

Oxford, OH 45056

#5 Brett Robinson
Po Bx 521
Parowan, Ut 84761

Step 2: Now take the number one off the list that you see above, move the other names up (5 becomes 4, 4 bcomes 3, etc...) And add your name on number 5 on the list.

Step 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. All you need is to post is 200, but remember the more you post the money you make!

When you type this up to send it to the newsgroups save it so that you don't have to keep typeing it over and over.

When your name is nolonger on the list then you just take the latest posting in the newsgroups and start posting again.

1261. Helical Antennas's: Do they out-perform beams?

Newsgroup: rec.radio.amateur.space
Date: 1997-04-12 00:00:00 UTC
From: rkling@umich.edu
Message-ID: <5ip4se$lvm@lastactionhero.rs.itd.umich.edu>
Source record: 19216

I am planning my satellite station and I have read a lot about helical antenna's.
From what I have read they appear to be better than beams and easier to build
Helical Pros:
greater bandwidth
easy and inexpensive to build
somewhat lightweight (UHF)
Helical Cons:
Single polarity
Heavy for VHF
More difficult to match than a beam.

I am looking for someone who has used or is using helical antennas to tell me how they perform. Becuase right now, my plan is to make a 440 helical antenna and purchase a 144 antenna. Before I spend the money I would like to have more information.

Any help will be greatly appreciated.

Greetings,

I'm confused! In the HAM-SPACE DIGEST dated April 10 the majority of the orbital elements were for the 098 day of the year. In the HAM-SPACE DIGEST dated April 12 the majority of the orbital elements were for the 087 day of the year. Why did they regress?

Thanks...Harry Mueller (KC5TRB, Tulsa)

>

All depends, this is mainly a problem with automatic record
level machines resulting in brightness level altering, showing as
bands. This can be overcome to some extent by fitting a pot in the
line between the rx and recorder so that the agc in the recorder
is not so active.
The best result I obtained is using the audio track on Sony EV3-C3E
video 8 recorder, with this I was able to record HF fax which I
found impossible using an audio recorder.
Hope this is some help.

tape recordings will not work with most wxsat demodulators..
there is a trick though!

use a VCR with a video signal already on the tape..the video provides the
sync for the demodulator..
or..
just use the WxSAT software which has no problem with tape recorded audio,
as long as your recorder is of good quality and you can disable the AGC or
auto level control..

more good info is available at:

It seems to work for some but not for others. Depends on the equipment.
I'd guess that you're more likely to see problems when recording on one
machine and playing back on another.

A completely reliable method is to record on videotape. By using prerecorded
tape or by feeding the VCR a video signal while you're recording the
satellite audio, you get sync signals on the tape and get a high-quality
playback. I've used this method myself.

I think you will need to read a bit about the topic, calculate the link
margin, and find the times and frequencies for best results.

Your station might be good enough for an experienced operator to work
a "big gun" under just the right circumstances, but you won't have a
chance by trying randomly and without experience.

The spelling doen't bother me. Your station description (45 watts and
small antenna) is probably FM mode only. If so, you may be interfering
with legitimate operations in the 144.000 ~ 144.200 frequency range. I
agree, with WR2F - read up on the subject. Good Luck, Brian/N0iMD

Hi, Would you be interested in making thousands of dollars quickly and legally?

If your answer is YES, then take 5 minutes to read this article. It will change your life.

You can make up to or more than $50,000 dollars in 4-6 weeks, maybe sooner!

I'M NOT JOKING AND THIS IS ABSOLUTELY NOT A SCAM

The internet has grown tremendously and it continues to double in size every 4 months. Think about it: You see all those "make.money.fast" posts more and more often. That's just simply because it works!!

I was browsing around my newsgroups one morning and I stumbled across this article. Since I have this burning desire to make a lot of money and this headline caught my attention, I read it.

It said that you send $1.00 to each of the five(5) names on the list. You then place your own name and address stated in the article at the bottom of the list at the #5 position and post the article in at least 200 newsgroups {there are literally thousands of them, and this doesn't take as much work as you think}.

At first I thought, nobody's going to do this. And then I thought, what if they DO! Besides, what's five bucks anyway? I spend that on snacks a few times a week. Well, it's still hard to believe...but two weeks later I began receiving bucks in the mail! I mean a lot of money!!! It not only works for me, but it works extremely well for others as well. Mike Ochoa says he made #35,382 dollars in one month! Chanter made $42,000 in four weeks!!! Dave Manning made an incredible $53,664 dollars in four short weeks!!! And

Lars myers says he only made $21,000 dollars (ONLY!!?}

That's the article. Now do I know all these people? No. But when I read how they did it, it started to make a lot of sense to me. As a matter of fact, it made enough sense that I'm now taking a similar chance with $5 measley dollars of my own. Not a huge investment that I can't afford to lose, but one with incredible potential to deliver money to my mailbox!!! Can you imagine making $20,000 dollars or more for less than an hour,s work? What are you making now? All you ever have to spend is five bucks and postage for the envelopes. That's all Mike, Dave, Chanter and Lars did and look what happened to them: they made tens of thousands of dollars in a safe, legal and completely legitimate way.

Let me show you how and why this works now. Also, make sure you print a copy of this article so you get the information from it and START MAKING MONEY NOW!!! here goes:

Get 5 separate pieces of paper and write the following on each sheet of the paper...."PLEASE PUT ME ON YOUR MAILING LIST". Fold a US $1 bill inside each paper {wrap the bill with the paper so the bill will not be seen through the envelope. Otherwise nosy people, who like to steal envelopes with money in them will see the bill and swipe your profits! Put one paper inside an enveolope and seal it. Do the same for all five. You should now have 5 sealed

envelopes, each with a piece of paper and a US $1 bill stuffed inside of the paper. You're not just sending a dollar to someone;

you're actually paying for a legitimate service which is PERFECTLY LEGAL! Now, mail all 5 envelopes to the following 5 addresses:

1. J.H.
2430 Meadow Lane
Lakeland, FL
33801

2. E2AA
2862 Donnylane Blvd.
Columbus, OH

43234

3. B.K.
12 Chasemont Ct.
Baltimore, MD
21209

4. P.G.
PO Box 340286
Columbus, OH
43235

5. E.S.
11966 sw 91 Terr.
Miami, FL
33186

Step 2

Now remove the top name from the list that you see above and move the other names up (#5 becoming #4, #4 becoming #3, and so on) and put your name and address as the fifth on the list.

Step 3

Post/send the amended article (with your name at #5 in the list) to at least 200 newsgroups. This is the REALLY IMPORTANT part, so don't try to shortcut it. I'll explain more about this under the WHY it works part. (you can also send by irc or e-mail). Post/send as many newsgroups as possible. REMEMBER THIS!!!!! THE MORE GROUPS YOU SEND/POST to, the more people will see your article and send you cash. That's the real power of this business.

You are now in business for yourself, and you should start seeing returns within 7 to 14 days!!!

HOW TO POST THIS ARTICLE:

If you have Netscape 3.0 do EXACTLY the following:

1. Click on any newsgroups like normal, then click on 'TO NEWS' which is on the far left when you're in the newsgroups page.

This will bring up a box to type a message in.

2. Leave the newsgroup box like it is, just CHANGE the subject to

something flashy, such as "NEED CASH $$$ READ HERE $$$" OR "FAST CASH"!!

3. Tab once and you should be ready to post. Cut and paste this article exactly as it appears,except to insert your name at #5, and to remove #1 off the list, plus any other small changes that you might think you need to make. Keep most of it the same though. You don't want to change it too much--it's proven to work just as it is written!

4. When you're done typing the WHOLE article,click on FILE IN THIS BOX, RIGHT ABOVE SEND, NOW WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click and SAVE AS when you're under FILE. Save your article as a text file to your C: or A; drive. DO NOT SEND YOUR ARTICLE UNTIL YOU DO THIS. Once saved move on to number 5 below.

5. If you still have all of your text, send or post to this newsgroup now by clicking send, which is right below FILE, and right above Cc:

6. Here's where you're going to post all 200. OK, click on any news group then click on "TO NEWS", again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHEMENTS. You will get another box to come up. Click on ATTACHED FILE, and then find your file that you have saved earlier; click once on the file, and then click OPEN. NOW CLICK ON OK; if you did this right, you should be able to see your name in the attachements box and it will be shaded green.

7. That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you only have 199 more to go!!! (don't worry, each one takes about 30 seconds once you get used to it}

REMEMBER 200 IS THE MINIMUM.

You are now in the mail order business and will start receiving your #1 envelopes from various people all over the world within days.HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE! Incredibly simple, isn't it?

LET ME TELL YOU WHY THIS SYSTEM WORKS!!!!!

Out of every 200 postings, let's say I only receive 5 replies, which is VERY LOW. So I made $5 with my name at #5. I've already made my money back!

Now then, each person who just sent me $1 makes 200 postings, now with your name at #4,

WHICH IS A TOTAL OF 1000 postings, not including your own. Say 50 people send you $1 now, which again, is a very low response rate; that's $50 you made!

Now then, your 50 new agents post 200 listings each with YOUR NAME AT NUMBER #3,

or 10,000 postings (25 x 200). That's just how the system works at its worst case. However, the average return is 500 responses at $1 each. That's $500 in your pocket!! Each of your new agents makes 200 postings, which is 5,000 returns at $1 each, which is

$5,000 dollars!! And finally, 5,000 people make 200 postings with YOUR NAME AT NUMBER 1, YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST, AND THAT.S IF EVERYONE MAKES 200 POSTINGS ONLY, AND WITH ONLY A 5 PERSON RESPOND!!!!!

When your name is no longer in the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $1 TO 5 people in the list, putting your name at #5 again. And start posting again. The thing to realize is that thousands of people

all over the world are joining the internet and reading these articles everyday, just like you are right now!!! So, can you afford $5 dollars and see if it really works? Estimates are at 20,000 to 50,000 new users everyday.

REMEMBER: WORK THIS FAIRLY AND HONESTLY AND IT WILL WORK! THE BASIC IDEA IS FOR EVERYONE TO MAKE MONEY. GOOD

LUCK TO ALL WHO

PARTICIPATE, AND PLEASE, PLAY FAIRLY AND YOU WILL BE REWARDED!

DON'T put this off!! It's SOOOO EASY and SIMPLE, so do it RIGHT NOW

You won't be sorry!

*You may also want to get some bulk e-mail software to help the process along even faster.

P.S. If you try to deceive people by posting the messages with your name in the list and not sending the $5 to the people already included, you will not get much. I know someone who did this and only got about $150 (and that's after two months.) Then he sent the 5 bills and was added to their lists. In 4 - 5 weeks, he had in excess of $10,000.

Hey Ice, you picked a very broad subject here!
You will need to be much more specific with your requests, or
folk will be posting you whole books on the subject.

What type of antenna do you want to build? What bands is it to
be used on etc etc.

Oh, and I'd send your spell-checker back to the makers!

Cheers.......Brian

Hello. I was testing moon bounse and see if I could get
someone out there, but it failed. I have 2M 45W output with a small
antenna. do you think it is good enough ? I was sending out on
144.000~144.200, but I never got the responses.

Masa:

I strongly recommend that you obtain, and read, some books on the
subject of Moon Bounce. Starting with the correct way to spell the
word "bounce."

Moon bounce is usually done with maximum power output signals being
fed to very high-gain antenna arrays -- preferably to a very large parabolic
dish. The mode used is always very slow CW.

Your 45w. never made it to the Moon, IMHO.

Anyone know a company that sells mil grade 2m repeater? I'm part of a amateur satellite project that's trying to get started and I want to put a mode A voice repeater on it. I have the downconverter, just need the repeater. Something that can stand extreme temps and its power can be computer controlled with a minimum of .75 watts would be great. E-mail me directly if you have any input.

Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal, please do not
use the satellite if the beacon seems to be humming. This occurs when the
```

satellite is in long periods of eclipse and the batteries are run down.

* Radio Sport-15 has battery chargeing problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective method for using this satellite.

* Radio Sport-16 currently has it's Mode A transponder turned off. Some activity over Europe was reported but uplinking via Mode A was not possible. Reports out of Russia speculate that the transponder may be turned on for amateur use sometime in late May or early June.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Digital mode until April 25. Here is the latest schedule:

Apr.11(Fri) 10:16z JD 1200bps
18(Fri) 00:46z JD 9600bps
25(Fri) 01:24z JA
May 2(Fri) 10:26z JD 1200bps
9(Fri) 00:57z JD 9600bps
16(Fri) 01:35z JA
23(Fri) 00:29z JD 1200bps
30(Fri) 01:07z JD 9600bps

* Mir Simplex and SAFEX have been reported to have been curtailed until certain repairs to the Mir complex can be completed. Some Packet over North America has been noted as of 08:00 Z Monday April 14. I would appreciate any activity reports for future updates.

* Unfortunately the STS-83 mission was ended early due to a problem with a Hydrogen Fuel Cell but if you were lucky enough to QSO them;

QSLs: Send reports and QSLs to ARRL EAD, STS-83 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-83, date, time in UTC, frequency and mode (FM, voice or packet). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Linear Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 2M

Mode T: Uplink 15M
Linear Downlink 2M

This FAQ is being updated and re-released on a weekly basis on
or about Monday. Any constructive suggestions are always welcome.

Do you *really* want to make a transponder by connecting a downconverter
to an in-band repeater??
I would advise you to read a bit on theory of transmitters and receivers,
and preferably transponders.

This gentleman's first tongue MAY not be English. Perhaps you may wish
to cut him a bit of slack in this regard.

>

Actually, in 1992 CO2KK worked KB8RQ with with 22 watts and 2 five elements
yagis. As well, on 2 metres, it's my understanding that many stations use
18-22 wpm CW to take advantage of libration effects. Yagis are the norm on 2 metres

However, I DO agree that reading up on the subject would be appropriate, and
not just for Masa.

1287. Images of Earth from Space

Newsgroup: rec.radio.amateur.space
Date: 1997-04-14 00:00:00 UTC
From: dougmunn@aol.com
Message-ID: <19970414202800.QAA03842@ladder01.news.aol.com>
Source record: 19143

I wasn't sure if you had seen the Satellite Image Gallery CD-ROM yet. Quite a few ham operators (especially "weather" people) have already ordered it (or our previous CD the "Satellite Image Sampler"). The CD has over 600 beautiful satellite images of the Earth along with games, tutorials and image processing software.

We've had the CD out for a little over a month and have just secured national distribution with a major catalog company. To celebrate, we are selling it for over the Internet for only $10.00 + shipping - until May 1st.

I won't waste your time here. You can visit http://www.idi-ut.com/sig.htm for more information and online ordering.

Thanks,

Doug Munn

1288. NORAD Two-Line Orbital Element Sets (TLE977)

Newsgroup: rec.radio.amateur.space
Date: 1997-04-14 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5iuaq5$4jr@blackbird.afit.af.mil>
Source record: 19144

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

SpaceNews
=========

MONDAY APRIL 14, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* MIR NEWS *
============
At 1730 UTC on 08-Apr-97, the Russian Space Center in Moscow reported that
the docking of the Progress module with the MIR Space Station was a success.
The Progress is bringing up vital spare parts to repair the carbon dioxide
scrubber on MIR. The scrubber shut itself off late last week when a coolant
leak caused it to overheat. Both NASA and Moscow are reporting there is no
danger to the crew.

In other news, the Associated Press reported last week that Russian controllers
had literally "pulled the plug" on ALL non-essential Mir activities until
further notice. There is little doubt that this also includes ham radio
since it is considered to be a non essential activity.

[Info via James Flynn and Bill Pasternak, WA6ITF]

* STS-83 MISSION SCRUB *
========================
Shuttle mission STS-83 was scrubbed early due to a problem with one of
the fuel cells carried on the space shuttle Columbia. Columbia landed
safely on Tuesday after cutting short its 16-day mission.

J. Dave Mayfield, KB9BNR, points out that the scrub was due not to any
partcularly danger condition on the space shuttle, but rather because of
space shuttle flight rules that require the proper functioning of three
fuel cells.

Quoting from NASA:

"The shuttle has three fuel cells, which use a reaction of liquid
hydrogen and liquid oxygen to generate electricity and produce drinking
water. Although one fuel cell produces enough electricity to conduct
on-orbit and landing operations, shuttle flight rules require that all

three be functioning well to ensure the safety of the crew and provide sufficient backup capability for the highly dynamic reentry and landing periods."

* SOLAR FLARE NEWS *
==========
A solar flare was detected by the Solar and Heliospheric Observatory (SOHO) satellite on 07-Apr-97 at 1400 UTC. The flare was reported to be a class C6/3N event meaning it was optically large, but contained relatively little x-ray energy. The next sunspot cycle is expected to bring solar flares 100 to 1000 times more powerful than last week's event over the next three to six years. These could produce suddent ionospheric disturbances, geomagnetic distrubances, auroral displays in many areas of the world, as well as anomalies and even failures of satellites in earth orbit.

Spectacular images of last week's storm taken by the SOHO spacecraft may be found at:

http://pao.gsfc.nasa.gov/gsfc/newsroom/flash/flash.htm

Current images of the sun and the solar corona may be found at:

http://umbra.gsfc.nasa.gov

Current predictions and other information can be obtained from the Space Environment Center at:

http://www.sec.noaa.gov

Information regarding current solar flux and geomagnetic data can be found at:

http://solar.uleth.ca/solar

A great deal of information is available from IPS Radio and Space Services in Australia pertaining to this subject may be found at:

http://www.ips.oz.au

* AO-27 NEWS *
==========

* CALL FOR PAPERS *
==========
The final call for papers to authors who wish to present papers at the 1997 Space Symposium in Toronto on Oct. 17-19, 1997 has been made. Authors and titles are due by May 1st with abstracts by June 1st. Final versions are due by Aug. 1st. Planners also encourage those not able to attend to consider a paper for publication in the Proceedings of the symposium.

Submissions should be made to Wayne Chandler, ve3whc@amsat.org, or by mail to:

W. H. Chandler
Box 6
Carlisle, On. L0R1H0
Ontario, Canada.

[Info via Wayne Chandler, VE3WHC]

* RS-16 NEWS *
==============
Pat Gowen, G3IOR, had the oppotunity to confirm that spurious emissions are indeed coming from the RS-16 satellite. These emissions are on the 70-cm band when the 435.504 MHz beacon is active.

At first, Pat looked for spurious emissions using his 2 x 1/2 wave verticals in phase. With this arrangement, he heard the 435.504 MHz beacon at an S9 signal level with no other signals detected. Pat then connected his 2 x 13 element RHCP AZ/EL Yagis, and sure enough, the spurious emissions reported by Leo, UA3CR, could be heard. The strongest was just S2, which Pat estimates to be about 35 dB below the beacon. Pat heard these emissions as very rough T2 auroral like signals on 435.461, 435.478, 435.483, 435.491, 435.507, 435.516, 435.524, 435.538 and 435.544 MHz. These frequencies are approximate due to the rapid Doppler shift of the downlink signals.

Has anyone tried setting up a telescope in a remote location and accessing it (sending control commands, receiving image data) via Amateur packet radio? We are looking into this and would gladly benefit from anyone else's experience in this area.

Andy Nourse - KC1IP

As recently reported in Space News and ANS, I believe, Mir's controllers
have directed the crew to suspend all non-essential activities until
problems with the station's environmental control system (e.g. O2
generation, CO2 scrubbing, etc.) are fixed. The recent Progress supply
ship carries replacement parts for these systems.

Like it or not, the Mir amateur station is considered non-essential.

Hopefully, they should be back on the air soon.

Well, in the United States, most government frequencies were classified
as confidential quite a few years ago.

I'm afraid I'm not much help, since I haven't played with HRPT data yet. However,
NOAA describes the data file format at http://www2.ncdc.noaa.gov/POD/c3/sect32.html It's obviously not compliant with common image formats like JPG, GIF, etc.

FWIW, folks interested in building their own receiving station should check out http://www.msoft.it/noaa95/ for hardware and software tips.

Brian/ice, it was all explained to me once a long time ago. All I can
remember is the phrase PFM, and something about magic.
Really, doesn't the RSGB make the equivalent of the ARRLs, "NOW YOU'RE
TALKING?" Then get the Handbook, then get the Antenna Handbook, etc.
The trick is to read.
Good luck,
Brian/N0iMD

Hi.

I am trying to obtain a copy of an article published in the
AMSAT journal, vol 15, No.1 Jan/Feb 1992. It was written by
Keith Bergland and called "Decoding RS-12/13 Telemetry"

Has anyone out there got a copy of this article, which
they'd be willing to let me have, all expenses paid of
course.

Replies to my Email address please....TIA....Brian

Good Morning Ice. Very broad subject -- but try the following books.
ARRL Antenna Handbook, Bill Orr's excellent Books on antennas, Easy-Up
Antennas for Radio Listeners and Hams by Edward M. Knoll, HF Antennas
For All Locations by Les Moxon. For ARRL Publications go to URL:
http://p1k.arrl.org/catalog/
Others are available at Ham Stores or your local book store.

Good Luck

From Space News 14 April 1997:

At 1730 UTC on 08-Apr-97, the Russian Space Center in Moscow reported that
the docking of the Progress module with the MIR Space Station was a success.
The Progress is bringing up vital spare parts to repair the carbon dioxide
scrubber on MIR. The scrubber shut itself off late last week when a coolant
leak caused it to overheat. Both NASA and Moscow are reporting there is no
danger to the crew.

In other news, the Associated Press reported last week that Russian controllers
had literally "pulled the plug" on ALL non-essential Mir activities until
further notice. There is little doubt that this also includes ham radio
since it is considered to be a non essential activity.

From another very reliable (but seperate) source:

Mir is only running 5 watts for school contacts because the existing
power supply is not big enought to run the radio at 45 watts. A
replacement power supply was ready to be shipped last week to Mir in the
Progress module, but because of the Air supply problem, the Power Supply
was removed from the supply rocket and replaced with air filters etc.

I keep my receiver on 24 x 7 listening for MIR. As soon as I hear
ANYTHING over the Eastern part of the USA, I will send out a message to
this newsgroup stating such.

No. Your expectations from such a modest arrangement are not realistic. EME is one of the most demanding modes for hams. Although moonbounce can be done using a couple of Cushcraft boomers and some high power and a very low noise receiver at one end, a more typical setup is like this:

From 1990 to 1994 the AF9Y 2 Mtr EME station consisted of:

Antenna - 6 x 22 element, 42' Boom Yagis
Amp - 4CX1500, 1500 Watts Out
Preamp - MGF 1302, 0.25 dB NF
Tx Coax - 300 foot run of 1 5/8 Hardline
Radio - Microwave Module & ICOM 781

You have a lot of work to do, Masa, but you have to start somewhere.
Check out these links for EME information:
http://www.webcom.com/~af9y/#Bullet 1

:
: No. Your expectations from such a modest arrangement are not
: realistic. EME is one of the most demanding modes for hams. Although
: moonbounce can be done using a couple of Cushcraft boomers and some high
: power and a very low noise receiver at one end, a more typical setup is
: like this:
:
: From 1990 to 1994 the AF9Y 2 Mtr EME station consisted of:
:
: Antenna - 6 x 22 element, 42' Boom Yagis
: Amp - 4CX1500, 1500 Watts Out
: Preamp - MGF 1302, 0.25 dB NF
: Tx Coax - 300 foot run of 1 5/8 Hardline
: Radio - Microwave Module & ICOM 781

IMO this setup is a bit better than typical.

To make an initial few contacts with the big stations you can just get by with the following. A single long yagi with ~30 foot boom (CC 17B2, M^2 2M5WL, etc) mounted horizontally and a 160w brick. A low noise sensitive receiver with a low noise preamp mounted near the antenna will help alot. With this setup you could work some of the big guns like W5UN, KB8RQ and SM5FRH on a schedule at your moonrise/moonset. You would need to have an idea at what elevation angle your antenna has lobes and have a fairly clean shot at the horizon. Antenna modeling programs can get you fairly close on figuring out where the lobes are located. I made my first few 2m EME contacts on a single Cushcraft 17B2 with 1200w output and no preamp. Programs using MiniNEC and NEC were almost right on in predicting the angle of my lobes (I have flat ground and no obstructions). On 2m EME contacts are almost exclusively CW as signals are generally very weak.

With two ~30 foot boom yagis and 1KW (with elevation control and preamp) you will be able to hear your own echos most of the time. I would pretty much consider this a entry level serious EME setup. With four 30 foot boom yagis and 1KW+ you get into the class of station that can to call CQs and effectively make random QSOs. I would consider this a typical/average 2m EME setup.

[lotsa good stuff snipped]

On a somewhat related topic, is there anyone who has surveyed which
non-amateur transmitters (or radars for that matter) can be heard
via moonbouce (or even moon bounse :))? I've been told that the
NAVSPASUR VHF (216.98 MHz, I think) transmitter at Lake Kickapoo, TX
is easy to hear when the moon passes through the beam.

: Any help will be greatly appreciated.

In addition to the pointer alread given to

http://www.tuc.nrao.edu/~demerson/helixgain/helix.htm

for relative gain discussions, I would point you to some of our recent
experience with helixes and OCARs (on-channel active repeaters)

http://www.tapr.org/~n6gn/ocar/build.html

and comment:

: Helical Cons:
: Single polarity

choice of RHCP or LHCP is, I suppose, single in that an
orthogonal polarization exists but relative to linearly
polarized antennas they are normally only 3 dB down in
performance for any choice. They work very nicely for
spinning satellites and for terrestrial use the negative
effects of a first reflection in a multipath environment
is reduced because it is counter-rotating.

: Heavy for VHF
Probably true, I've built them for wx satellite reception at
137 MHz but the structure is pretty big and mine was slightly
comical. It sure worked well though.

: More difficult to match than a beam.

I might take issue with this. I find that achieving a
good broadband match with a helix is extremely easy.

Normally I just taper the first section of the helix
conductor along the groundplane for a quarter
wavelength. If the spacing is set to the desired match
impedance at the feed end and tapered upward (normally)
to ~140 ohms at the helix end a very nice broadband
match is easily achievable. This is far broader than
the matches I normally get with parasitic arrays (yagis)
or colinear arrays.

My experience coincides with the above reference on helix gain vs. boomlength.
For higher gains, helixes start to have reduced return on investment and
stacking makes more sense than extending the number of turns. This starts
to diminish some of the benefits a short to mid-length helix offers.
Still, I think they are a great antenna.

The aggregate collection of Federal government radio frequency assignments, called the Government Master File (GMF), is classified as Confidential. Within the GMF there are some assigments that are classified as Confidential. Assignments with higher classifications are not listed in the GMF.

It appears that the National Telecommunications and Information Administration, keeper of the GMF, will soon begin releasing radio frequency assignment information from the GMF for assignments that are not classified or Freedom of Information Act (FOIA) exempt.

A good number of the assignments in the GMF have become public knowledge and, for the most part, the Federal agencies are not too concerned. Individual assignments are classified for reasons other than trying to avoid eavesdropping. Encrytion, not "security by obscurity," keeps conversations private.

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up satellite schedules to contact hams all over the world.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

1317. New Nanosat needs downlink: Is Ham the way to go?

Newsgroup: rec.radio.amateur.space
Date: 1997-04-19 00:00:00 UTC
From: "Robert W. Cunningham" <rcunning@acm.org>
Message-ID: <33588298.559D5954@acm.org>
Source record: 19073

Hi,

I am mentoring a satellite design project at the University of California, San Diego (UCSD). The group is designing a very small satellite (10-15 cm smooth sphere with NO external projections of any kind) that will be used to characterize, to extremely high precision, the atmospheric drag characteristics of LEO orbits.

The satellite will contain just enough intelligence to gather data and figure out when it is over our ground station. During the 2-4 minute window while it is approximately overhead, it will dump accumulated data. It is expected that passes directly overhead (or close enough) will occur about 3 times per month, and that one is likely to be lost due to ground station problems (weather, power, repairs, whatever).

The satellite will be completely powered by alkaline batteries, with separate sets for the CPU and transmitter. For a 3-6 month mission, it is expected that the available power will support at most 1W of radiated power, with 250mW being the more likely target.

The satellite's small diameter, combined with it's complete lack of attitude controls (it will tumble), means the transmission must be omni-directional. The antenna(s) must be very efficient, very small, and very light. The only technology that seems even remotely possible appears to be some novel form of an array of patch antennas.

One goal (among many) is to minimize ground station cost and complexity. There is no uplink. And we'd like to use a Ham band so we can mazimize the number of potential ground stations, in case our position calculation software miscalculates and transmits over the wrong piece of ground. We'll be posting the orbital elements frequently.

Since I am a no-code Technician (KE6RGA) software type, I am rather stymied where to go from here. So I have a few questions for any of you sat-savvy net-heads who're up to the challenge:

1. Can we get decent antenna efficiency (for the itty-bitty Tx antennas) anywhere in any Ham band?
2. Would a packet-like downlink be bandwidth and cost efficient?
3. Can the 1.24GHz band work? The Yaesu ft736 sure looks nice!
4. If we have to leave the ham bands, where would be a good place to go? 5GHz looks good, and there are some new miniature Tx's that are fairly efficient in that band. We will be able to get the required FCC/ITU clearances, which are trivial for 1/4W with only overhead Tx.
5. Would anyone be interested in a cash contest driven by the reception

of data from our nanosat? If we miss our own ground station, the first Ham to get each data set to us would get $100. That would be one award every week or so, for the 3-6 month duration of the mission, which ends when the satellite burns up on reentry.
6. Any recommendations for an inexpensive PC-controlled high-gain steerable ground station antenna?

There are probably many more "obvious" questions I forgot to ask, so please feel free to ask and/or answer all you can!

The project's Web site will be up within 2 weeks (after the preliminary design review is completed), and lots more technical information will be available then.

Thanks, in advance!

- Bob Cunningham, KE6RGA

Since you only have a downlink (no uplink to send ACKs/NAKs) I would strongly recommend using a robust forward error correction code and interleaving to avoid problems with multipath fading (unless you have a very narrow beam receive antenna). The FEC is important as you had very few chances to capture the data.

>3. Can the 1.24GHz band work? The Yaesu ft736 sure looks nice!

The frequency ranges 1260 - 1270 MHz and 5650 - 5670 MHz are allocated for amateur satellite service, but only for uplink (CCIR Radio Regulations 664, I do not know if ITU-R still uses the same numbering).

The band 5830-5850 MHz is also allowed for Amateur Satellite service, but only for downlinks (RR 808).

>4. If we have to leave the ham bands, where would be a good place to
> go? 5GHz looks good, and there are some new miniature Tx's that
> are fairly efficient in that band. We will be able to get the
> required FCC/ITU clearances, which are trivial for 1/4W with only
> overhead Tx.

There are space research and satellite communication allocations near 5 GHz, so the FCC/ITU clearance should not be too hard to get.

However, there is one problem when you go up in frequency. When you are using an omnidirectional transmitter antenna, the power density at the ground is constant regardless of frequency (about -96 dBm/m2 at 0.25 W and 300 km) so an antenna with an effective capture area of 1 m2 should give a good signal with a comfortable margin (this margin is certainly required, since you only had very few chances to dump the data). At low VHF frequencies, a dipole has that capture area of 1 m2 and you do not need to turn the receiving antenna during the pass. However, on 5 GHz you need a parabolic reflector to get 1 m2 of effective capture area (a 1.2 m dish should suffice). Unfortunately, this antenna has a high directivity (3 degree beam width, about 6

times the diameter of the moon or the sun), so you would have to be able to control the antenna quite accurately. This can be difficult for a low flying fast satellite and you need very accurate elements so you can accurately predict the time of arrival.

A lower frequency would be preferable as this reduces the pointing accuracy requirements.

>5. Would anyone be interested in a cash contest driven by the reception
> of data from our nanosat? If we miss our own ground station, the
> first Ham to get each data set to us would get $100. That would be
> one award every week or so, for the 3-6 month duration of the
> mission, which ends when the satellite burns up on reentry.

The problem is that most ham equipment for the microwave bands are tranverters converting to the 2 m bands and the transverter input is centered at the narrow band segment on each amateur band. The Phase-3D satellite might change the situation with more user equipment tuneable on a larger range.

General coverage scanners are available up to 1.5 GHz and some even to 2.5 GHz, so this also suggests using a frequency in the low end of the microwave band.

Only $5.95 http://6com.com

TUNE IN to messages and conversations of many Governmental Agencies, Military Installations, Space Shuttle Missions, Police stations, Airports and more. Simply set your scanner to the listed frequencies and VOILA; Your in the know.

Contains 100's of SECRETGoverment RADIO FREQUENCY

Also contains Fire and Police Department frequencies for most major cities, Cab companies, Cable TV, Business Bands, Pagers, Marine Radio and lots more. As an added BONUS disk includes complete translations of all Governmental brevity and ten codes. All the above lists come on one 3 1/2" Disk (PC Format). Buyer prepays we will pay shipping. Visit our web page for more great deals and FREE info.

I think you may need a bit more for EME. The EME stations I have read about used arrays of beams. I would imagine they also used more power.

I would be interested in learning what the minimum you can get away with is.

It might be useful to try and set up a sched (time & freq) with someone or a group.

I think another fun thing to try would be meteor scatter. I read an article on it in one of the HAM mags (QST possibly?)

Hi!
I've recently started working on our university's satelite tracking station,
as I am an Ham I would like to use this station to introduce our students to
ham satelite comunication and possibilities. On thing I would like to do is
to get some pictures.
I teach geology and would like to use those pictures as examples of
remote imagery study. I know i can get some pictures on the internet, and I would also
appreciate if someone could send me some addresses, but one of the main goal would be
direct programing and aquisition from the satelite. Could someone
send me info on what satelites (ham sats) have cameras, and what do I need to do to operate
it, and what software do I need.
Our station is currently using Wisp form amsat, and is composed of a kenwood 790 dual band,
yaesu 5600 rotor, 1 linear output amp for 150W, a pre amp. two crossed yagis with mast pre
amps for VHF and UHF, and an MFJ 9600 modem.
Thank you for your attention!

The short answer is YES. The radio does track tune, and you can
set it to track upright or inverted transponders at the flip of one
switch.

Hi, I want to install, two yagis a 2m and a 70cm for satellite work.
What should be the minimum horizontal spacing between them?
I have also noticed that many Hams use a fiberglass horizontal boom to
mount these kind of antennas, what is the reason for this, can an
aluminum boom be used?
I would appreciate you valuable input. Thank you.John KF4KWW

So, for 2m + 432 only, would you prefer the FT736R or IC 821H? What features, signal qualities, etc. are better on either for working the birds?

Thanks...

Charlie

1336. Blackout's Box REAL AUDIO pranks are hilarious!

Newsgroup: rec.radio.amateur.space
Date: 1997-04-21 00:00:00 UTC
From: Blackout <Blackout@wizlink.net>
Message-ID: <5jgpb0$11c@wiznet.wiznet.net>
Source record: 19092

Ok, it may not go in this group but I have to get the word out somehow so
I am letting you know here.

The funniest web site EVER has now officially opened using REAL AUDIO technology.

Blackout's Box
WWW.BLACKOUT.COM

You will laugh, you will cry, you will pee on yourself... you will cough up your lunch
from the intense amount of laughter you will be experiencing.

You MUST check out Blackout's Box at

http://www.blackout.com

Hear the most insane stuff you have ever heard, broadcast to your
computer instantly over the net with REAL AUDIO 3.0 which you can DL
for FREE if you don't have it already. This is not a commercial site or a business
or any other type of advertisement. It is just a very funny and very FREE site that I
want Everyone to know about. If you like Monty Python, Jerky Boys, Howard Stern,
Kids In The Hall, The State, Robin Williams, Who's Line Is It Anyway,
or anything like that - you will love Blackout's Box, there is nothing like it on the net.
Don't let the words 'prank call' scare you away.. this is no 12 year old fun, this is
intensely funny candid phone call radio drama that critics on and off the net are giving
two thumbs up.

Blackout's Box simply kicks ASS, stop whatever work you are doing,
take a break, and check it out now! Life is short - LAUGH some.

Blackout's Box
Insanity On the Net

SpaceNews
=========

MONDAY APRIL 21, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* GOES-K READY FOR LAUNCH *
==========================
The launch of the GOES-K weather satellite for NASA and the National Oceanic
and Atmospheric Administration (NOAA) aboard a Lockheed Martin Atlas 1 rocket
(AC-79) is scheduled for April 24. Liftoff is targeted to occur at the
opening of a launch window which extends from 1:50 - 3:09 a.m. EDT (0550 to
0709 UTC), a duration of one hour and 19 minutes. Launch will occur from
Pad B at Complex 36 on Cape Canaveral Air Station.

GOES-K is the third spacecraft to be launched in the new advanced series of
geostationary weather satellites for NOAA. The spacecraft is a three-axis
internally stabilized weather satellite which has the dual capability of
providing pictures while performing atmospheric sounding at the same time.
Once in orbit the spacecraft is to be designated GOES-10.

AC-79 marks the final launch of an Atlas 1 rocket, a derivative of the
original Atlas Centaur developed by NASA which had its first successful
launch in 1963. Future launches of GOES weather satellites in the current
series will be on Atlas II vehicles.

NASA Television will carry live the GOES-K/AC-79 Prelaunch Press Conference
on Tuesday, April 22 starting at 1 p.m. (1700 UTC). NASA Television is
available on the GE-2 satellite, Transponder 9C, located at 85 degrees West.

[NASA Press Release via Larry Van Horn]

* OSCAR-10 NEWS *
=================
Several users of the AMSAT-OSCAR-10 Mode B communications transponder have
reported some frequency instability ("FMing") of downlink signals and the
beacon during use. This is probably due to a lack of illumination on the
spacecraft's solar panels. Users are asked to refrain from using AO-10

during such periods.

* OSCAR-11 NEWS *
==========
It has been a quiet month on OSCAR-11. During the period 19-Mar to 16-Apr, good steady signals have been received from OSCAR-11's 145.826 MHz beacon.

Recent telemetry shows that the increasing solar eclipses have continued to reduce the internal temperatures by a further four degrees, now about 12 degrees C below the full sunlight condition. The battery voltage continues to be rather low, in the range 13.3 to 13.8 volts.

The single WOD survey of channels 40, 50, 52, 63, (Array voltage, battery charge, battery voltage, BCR status) dated 22-Feb has been transmitted during this period. A short file of this WOD is available from the Clive Wallis's OSCAR-11 WWW site, and will be updated when the WOD is changed and the maximum amount of data has been received.

Two AMSAT bulletins by Richard G3RWL have been uploaded. Topics have included RS-16 / Zeya information and a Phase-3D progress report. Bulletins always include current Keplerian elements for OSCAR-11, and often for satellites featured in the bulletin.

The operating schedule is unchanged:

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

OSCAR-11 can be heard on 145.825 MHz. Modulation is 1200 baud AFSK, with tones of 1200/2400 Hz. There have been many designs for suitable decoders, including the high performance correlation demodulator (used by ground control), designed by James Miller G3RUH. However, the simplest way is to use an old telephone modem that uses Bell 202 or V23 tones. It is essential to invert the modem's output signal before feeding it into the computer.

It is also possible to use a BAYCOM type modem which does not require any output inversion. Just connect its output to RXD instead of CTS.

Another way is to use a HAMCOM interface instead of a modem. A small program called EM1200M2.COM (which is part of EMBAYCOM) emulates a modem on port 2. Port 1 is used for the terminal display program. Unfortunately, this method uses two COM ports, and can be a little tricky to wire up.

For ASCII, the serial port should be set to 1200,E,7,1. If the port is set up to eight bits, then some filtering of the data will be requiredi before it can be displayed.

Further information and software is contained in file CTERM.ZIP, which
can be downloaded from the following URL:

http://www.users.zetnet.co.uk/clivew/

[Info via Clive Wallis, G3CWV g3cwv@amsat.org]

1338. NORAD Two-Line Orbital Element Sets (TLE982)

Newsgroup: rec.radio.amateur.space
Date: 1997-04-21 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5jguv0$1r6@blackbird.afit.af.mil>
Source record: 19094

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

I've never used the IC821H on the satellites, Charlie, so I can't
really comment on it. I have used the Icom Twins, IE IC275 and
IC475, and they are *great*. That's what I'd be using instead of
the FT736R except for the *cost*.

The minimum spacing is one where the elements of the two antennas
don't overlap. Optimum is more like 1 wavelength at the lower
frequency. The reason for using non-metallic cross booms is to avoid
distorting the antenna pattern circularity by having metal in the near
field.

1344. Mir Crew May Have to Evacuate

Newsgroup: rec.radio.amateur.space
Date: 1997-04-23 00:00:00 UTC
From: Mike Cat <anti@spam.address>
Message-ID: <335DFF70.6BCE@spam.address>
Source record: 19100

This email was being circulated about on Tuesday afternoon.

Tuesday April 22 3:45 PM EDT

Mir Crew May Have to
Evacuate

KOROLYOV, Russia (Reuter) - The
Russian-American crew on Russia's 11-year-old Mir
space station are struggling with a leak of antifreeze
vapor and may have to abandon ship, mission control
said Tuesday.

Spokesman Viktor Blagov said that at the moment
there was no reason to evacuate Mir, but added:
"The team is continuing its repairs. It's a difficult task
and if it cannot be solved Mir might be abandoned by
the cosmonauts."

Speaking from space, NASA astronaut Jerry Lineger
said he and his two Russian colleagues had almost
abandoned ship twice in the past few months.

Blagov, deputy head of the flight program, said the
cosmonauts had repaired two leaks in the cooling
system with special glue but had yet to find a third
through which antifreeze was escaping into Mir's air
supply.

"It's on the limit of what is acceptable," he told a
news conference, adding that it was not clear how
dangerous the concentration of antifreeze vapor was.

"We immediately told NASA about the defects on
the station and the American specialists are kept
continually informed about what is happening on
Mir," he added.

He said an urgent evacuation of the cosmonauts
could be ordered from ground control or by the
space station commander.

"That could happen if there's a big fire on the station
or if there is decompression," Blagov said, adding
that the men could reach Earth in an hour using the
Soyuz rocket which is now docked with Mir.

"Mir orbits Earth 16 times in a 24-hour period. Three of them are over the region of the launchpad in Kazakhstan, where everything is ready for a search for the cosmonauts," he said.

The Mir crew could also return to Earth in any other orbit, he added. "But in that case the place of touchdown could be in France, Ukraine, Britain, Asia or the United States."

The leaks, which occurred during the past month, are the most serious so far on the station, which has also suffered four fires while in orbit, the last in February.

Blagov said that leaks had been caused by electric cables touching the pipe carrying anti-freeze to the cooling system. He said that 1.6 liters of antifreeze had leaked out. A liter is about a quart.

In the Kvant module where the main cooling system equipment was, the temperature had soared to between 79 to 88 degrees, which was bad for the cosmonauts trying to carry out repairs and could damage equipment for scientific experiments stored there.

Igor Goncharov, specialist for medical emergencies on the orbiting station, said the crew's morale had been hit by the high temperature and stress suffered by the cosmonauts as a result of a fire Feb. 23.

"They complained of insomnia but an analysis of their blood and urine did not show any abnormalities in their organisms," Goncharov said, adding that the men had interrupted their sleep patterns by working through several nights.

"Now they have been given strict instructions to go to bed at 11 p.m. and wake up at eight in the morning," Goncharov said. The cosmonauts had also resumed their physical exercises.

In four of Mir's six modules, living conditions were normal. "The team spends most of its time in safe sections," he said.

Looks like Mir will have to be abandoned soon. So who wants to set up a pool as to where it will crash land?

1346. New satellite station

Newsgroup: rec.radio.amateur.space
Date: 1997-04-23 00:00:00 UTC
From: Nathan Gordon <nathang@bigfoot.com>
Message-ID: <01bc4fe2$d0dd52a0$dff489cc@Sheaffer.mcs.net>
Source record: 19102

Hello, I have been reading about satellite operations and would like to give it a try.

Does anyone know where to start? I have an HF rig and would be happy to buy used equipment if it is available.

Also, would it be better to buy a multimode VHF UHF rig or build transverters and hook them up to my HF radio. I am primarily interested in operating CW and possibly digital, and am not sure what equipment is necessary.

Finally, are there any books that would be helpful for a new guy?

Thank you in advance for your help.

73,
Nathan Gordon KF9LI

Hi

And thanks for reading this Post, I purchased a Yeasu rotor
and GS232 computer interface. I can not find anyone who sells
automatic tracking software for this rotor. I have found that
most software is for the Kanas City tracker. Does anyone know
if software for the KC Tracker will work with the GS232 or
can I replace the rom in the GS232 to work with this driver.....

Thanks in advance

The group is designing a very small
> satellite (10-15 cm smooth sphere with NO external projections of any
> kind) that will be used to characterize, to extremely high precision,
> the atmospheric drag characteristics of LEO orbits.

<snip>

Sounds like an interesting project!

> 1. Can we get decent antenna efficiency (for the itty-bitty Tx
> antennas) anywhere in any Ham band?

Nothing I read in your message specifically precludes an embedded
radiating element. A 15-cm (diameter) ball gives you about 47 cm
(18.5 in) circumference. This is just under 1/4 wavelength for
145 MHz (51 cm). As a rule of thumb, antenna efficiency for 145
MHz and up should not be that much of an issue.

> 2. Would a packet-like downlink be bandwidth and cost efficient?

Maybe/probably. How much data do you have to dump?

> 3. Can the 1.24GHz band work? The Yaesu ft736 sure looks nice!

Yes, but this conflicts with the desire "to use a Ham band so we can
mazimize the number of potential ground stations". There aren't a
heck of a lot of hams on this band (compared to 2m).

just because it may be abandoned doesn't mean it's coming down soon.
Sounds like the reason it's being considered for abandonment is internal
atmosphere--not degradation of the orbit. We may not be alive when it
comes down.

Hi there, Nathan. Make sure you visit the AMSAT site for
some introductory information. You can find good staring
info at http://www.amsat.org/amsat/intro/faqs.html, including
"Working the Easy Sats." It is an informal introduction hamsats
combined with hints on getting started using the more easily
accessed satellites.

A multi-mode 2m tx and a 10m receiver will get you on the
Russian satellites in SSB or CW modes. An Isopole or similar
omni VHF antenna and a 10m dipole work fine with 25-30W. Digital
packet requires a little more substantial investment for PACSAT
operation if you don't already have the TNC(s) and/or 2m (up) and
70 cm (down) radios. Although there are 1200 bps sats up there,
the 9600 bps birds are more popular I think.

Re: transverters versus transceivers, if you can find some used
V/UHF rigs, you could pay a premium if they're multimode. Thus,
transverters offer a relatively inexpensive alternative. The
downside is that unless you have another HF rx, you're going to
have trouble with full duplex operation as some modes require.
There's no real all-in-one solution for working all modes and
birds, so you'll need to plan a bit if you want to make the most
of your budget.

Good luck. Stop by here often.

Downlink 437.950 FM

SAREX Simplex (Space Shuttle)*
Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-----------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
use the satellite if the beacon frequency wavers, or if downlink signals
```

chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective method for using this satellite.

* Radio Sport-16 currently has its Mode A transponder turned off. Reports out of Russia speculate that the transponder may be turned on for amateur use sometime in late May or June.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Digital mode until April 25. Here is the latest schedule:

Apr.18(Fri) 00:46z JD 9600bps
25(Fri) 01:24z JA
May 2(Fri) 10:26z JD 1200bps
9(Fri) 00:57z JD 9600bps
16(Fri) 01:35z JA
23(Fri) 00:29z JD 1200bps
30(Fri) 01:07z JD 9600bps

* Mir Simplex and SAFEX have been discontinued due to serious mechanical and electrical problems with the MIR space station. At this time it is unknown whether or not the crew will have to abandon ship due to leaking toxic coolant fumes harming the crew.

* Space Shuttle Frequencies when in orbit. Next SAREX mission tentatively et for Summer 1997.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 2M

Mode T: Uplink 15M
Linear Downlink 2M

1355. ADVERTISE TO OVER 100 MILLION PEOPLE FOR FREE!!!

Newsgroup: rec.radio.amateur.space
Date: 1997-04-23 00:00:00 UTC
From: nejeh@gdi.net
Message-ID: <5jmd2j$65g@news.gdi.net>
Source record: 19111

Please take the time out to read this email. it is worth your time.

ADVERTISE TO OVER 100 MILLION PEOPLE FOR FREE!!!
Or send a message to millions of people...

NOW YOU CAN ADVERTISE FREE AND GET DRAMATICALLY
MORE RESPONSES THAN ADVERTISING ON NATIONAL TELEVISION

With E-mail your potential customer is forced to read at least the
headline of your letter. Unlike TV, magazines, newspaper ads, and
direct mail where more than 99.99% of the recipients will skip right
over your advertisement.

TURNS YOUR COMPUTER INTO A CASH REGISTER: Conservative estimates indicate
well over 100 MILLION people will have E-mail accounts in the next year!
E-Mail Blaster turns your computer into a cash register by giving you FREE,
immediate access to all of them. Do you think some of the more than 100
million people with E-mail addresses would be interested in your products or
services? Even if you don't have your own products or services you can
still make money buy promoting our computer software!!!
You can make money with our new software called E-MAIL BLASTER

Here's how:
* By Using E-Mail To Sell Your Products & Services
* By Using E-Mail To Sell our Computer Software such as: Email Blaster, Web Walker,
Email Lock Box etc.
* By Renting or Selling Your E-mail Addresses
* By Becoming A Distributor for e-mail BLASTER

MUCH FASTER: With bulk E-mail you get responses back in 1 to 4
days instead of waiting weeks or months like with television or print
advertising. You can begin filling orders the same day you send E-mail.

FREE ADVERTISING WORTH MILLIONS: It costs millions of dollars to mail out
millions of letters using the United States Postal Service! Now you can
send your ad to MILLIONS of people for FREE using E-Mail BLASTER

E-MAIL BLASTER IS ACTUALLY 3 PROGRAMS IN 1: E-Mail Blaster is amazing new
technology and the most advanced bulk E-mail software on the market today.
(1) E-Mail BLASTER automatically extracts E-mail addresses from America
Online, CompuServe, Prodigy, and the other online services, the Internet,
web pages, news groups, and hundreds of other sources. (2) E-Mail BLASTER
automatically stores the E-mail addresses in your computer along with
keywords that describe hobbies and interests to created highly targeted
E-mail addresses. (3) E-Mail BLASTER sends your marketing letter or ad to
MILLIONS of targeted E-mail addresses at the push of a single button!

HOW DOES E-MAIL BLASTER WORK? E-Mail Blaster has dozens of special filters to automatically harvest E-mail addresses from major online services such as: America OnLine, Compuserve, Delphi, Genie, and of course the internet.

AOL AUTO EXTRACTOR: E-Mail Blaster has many special features like the AOL Auto Extractor that let's you use a regular dial-up Internet connection to collect names and addresses from America Online. Collect America Online addresses without being a member. Allows you to download names and addresses from America Online without paying membership fees or online charges. Auto Extractor for all of the online services and Special E-mail database search engines will also be available at no additional charge.

SIMPLE TO USE: E-Mail Blaster does all the work for you. Unlike other programs where you must cut & paste addresses, E-Mail Blaster does it for you automatically. And, unlike other E-mail programs, with E-Mail Blaster there is no need to purchase any additional software

SPEED: Your time is important. E-MAIL Blaster is DRAMATICALLY FASTER at extracting and sending E-mails than all the other programs on the market that we tested it against.

NO SPECIAL EQUIPMENT NEEDED: E-Mail Blaster runs on a PC with Windows 3.xx Windows 95, Windows NT, a 386 or faster processor, 4 MB RAM, and a hard drive with at least 10 MB free and your own SLIP or PPP connection. No other software needed. Also runs on a Macintosh with Soft Windows installed.

****
This message was sent using E-Mail Blaster.

E-Mail Blaster is The World's Leading Bulk E-mail software.
With E-Mail Blaster you can advertise to over 100 million people for FREE!

Cost: We are giving away Email Blaster your only cost is $165.00 License fee.

THAT'S IT!!!

Our company is in the software business of developing cutting edge products, so we know if you have the opportunity to use our software FREE you will be our future customers. We know we need you to make our software business a true success!

(Please if our lists are incorrect put "remove" in the subject and just hit "REPLY" and you will not be bothered again. Please forgive our mistake).

1356. PacComm TNC NB-96 and PSK 1 ??

Newsgroup: rec.radio.amateur.space
Date: 1997-04-23 00:00:00 UTC
From: kb7hed <kb7hed@nicoh.com>
Message-ID: <335ED870.176B@nicoh.com>
Source record: 19112

I have the PacComm TNC NB-96 and PSK 1 combination for working the digital sats.
They are working very well for KO-23, KO-25, and UO-22. I have been trying to
work FO-29 with no success. I can monitor the downlink 1200 bps PSK signal but
do not seem to be able to connect to FO-29. I have tried monitoring the uplink
with another packet setup and I think I am getting the PTT (keying the radio) but
am not getting any data out. I am hoping that the problem is some simple thing
that I am neglecting - If anyone could offer a suggestion I would be grateful.

Tnx and 73

Hi John, The fiberglass boom allows circular polarization. If any metal, including coax breaks the antennas pattern around the antenna the polarization is incorrect. Note that it is important that even the coax be run back down the boom and off the end, Rather that dropping through the pattern

Hope that helps...

>if software for the KC Tracker will work with the GS232 or
>can I replace the rom in the GS232 to work with this driver.....

I once borrowed someone's GS232 and studied the interface protocol.
I think it was not very clever (understatement of the year).

Then I disassembled the EPROM and sort of planned to make a decent
controller out of this, but I found the "AMSAT-DL tracking interface"
and built that one, because it is even simpeler and much more reliable.

I have never seen software for the GS232, but it would be possible to add
support for it to a tracking package that is available with sourcecode.
(e.g. SatTrack for Unix/Linux)
Unfortunately, availability of sourcecoude is unusual in the DOS/Windows
environment in which you probably are interested.

If I were to use a GS232, I certainly would modify the firmware. As it
is now (open loop, control entirely done in the computer) it just sucks.

With what you have at hand, the best starting point would be to configure
a Mode A station. That'll require you to add a 2m transmitter to your
existing HF rig. The cheapest way to do that is to grab an old Motorola
or GE Tx strip from a land mobile rig. You can VXO the channel element
by inserting a tuning voltage on the temperature compensation pin. And
of course you can CW key the Tx strip. These things come in 80 W and
110 W versions, so they offer plenty of signal for use with a simple omni
2m antenna.

Latest report is there's an anti-freeze leak and they MAY have to come back.
The station can be kept up without a crew if I'm not mistaken.

Discover mag has a very good special edition on space exploration this
month. There is a particularly good article on the Ariane 5 and its
troubles. Very interesting discussion of the software problems.
At the end of the article they mention that the only real passenger
on the second launch attempt will be a ham radio satellite.

I was encouraged by the article and am now more confident about P3D's
chances to get into orbit.

My apologies to all here, I should have been clearer in my original post. The money we have now is going towards a club station, as we can't get everything from local donations. These kids can only do so much on their own--and fundraising has to be done as a group, and usually has to benefit the group as a whole, as there just isn't enough to spread the wealth around.

Once again, sorry for any confusion that resulted.

> Maybe/probably. How much data do you have to dump?

Well, we need to operate the transmitter for about three months using
only 4 alkaline "D" cells! Here's a list of some of our constraints:

1. Transmit window of 3 minutes 6 times each month.
- Each data set contains 5 days of data, AVERAGE, maybe more
depending on the overhead pass schedule.
2. Each data set is transmitted three times, once during each of three
successive transmit windows.
- That leaves 1 minute for each full data set
3. Transmission overhead (protocol and error correction) is 50%.
4. Lossless data compression of 3:1 is likely.
5. A daily data set will be no more than 10 Kbytes, before compression.
6. A data transmission rate of 4800 baud is desired.
- Do the math, and it all barely fits.
7. Mission duration is 3 months.

- This means there is a total of about 60 minutes transmit time during a nominal mission.
8. There is room for just 4 "D" cells.
9. An alkaline "D" cell (Duracell) is typically rated for 15 Ahr under nominal operating conditions:
Size Voltage Capacity Vcutoff Load Drain
D 1.5 15,000 mAh 0.8 v 10 ohms 115 ma
We, however, will be operating at a 1:2400 duty cycle: 3 minutes on and 5 days (7200 minutes) off.
- Assume a battery derating of 90% for this type of pulsed use (I have no idea if this is a good assumption). That leaves us a total available capacity of 4 * .9 * 15 Ah / 1 hour = 5.4a.
At 1.5v that's 8.1W.
10. The antenna must fit entirely within the sphere (though it may by flush with the surface if it conforms to the spherical shape).

Now, that's 8.1W to the power supply and transmitter. That raises two questions:
a) What are typical electrical-to-RF efficiencies for various transmitters on each frequency available to us?
b) What are typical input-to-radiated efficiencies for the antennas available to use for each frequency?

Here's where I have no data (yet). With 8W in, can we get 1W or 0.5W RADIATED OMNI-DIRECIONALLY from within our 10-15 cm sphere?

If the frequency is high enough, an array of patch antennas may do the trick. But otherwise it looks like we'll want to use some form of folded center-driven dipole. Yes? No?

From other discussions on and off this newsgroup, I expect I will need at least 0.5W from LEO (400 Km orbit) to have a prayer of sending 4800 baud to the ground with any reliability.

Or have I missed something?

What transmitter-antenna combinations are possible? I'm mainly interested in the antenna problem, since I hope to have access to some state-of-the-art miniaturized transmitters.

-BobC

What kind of orbit makes you have only 6 passes each month?
When I first read that, I assumed it to be a typo. Many amateur satellites
in low orbits have at least 6 passes each day, at my latitude (52 north).

You seem to be looking for exactly overhead passes. In my experience, these
are not optimal because the change of antenna direction per unit of time
is highest for overhead passes, and thus it is most difficult to keep the
antennas pointed. A 40-50 degree pass is much easier to track.
Of course the path is longer, but you should not only focus on path
length. A well pointed yagi will give you more signal over a longer
path than an omni or wide-lobe antenna that you keep sort-of-pointed
at the zenith.

Having 4 cells gives you only 6 volts, which is nice for digital stuff
but a bit low for VHF/UHF electronics. Those circuits usually feel a
bit better at 12v or even more. You could convert the voltage but that
of course introduces another loss.
You could also look for other batteries (lithium?) that may provide more
capacity in the same volume. Philips also recently introduced a new
consumer-grade battery that has more capacity than Duracell's.

>Now, that's 8.1W to the power supply and transmitter. That raises
>two questions:
>a) What are typical electrical-to-RF efficiencies for various
> transmitters on each frequency available to us?

A few VHF and UHF transmitters with pretty impressive DC-to-RF efficiency
were built for the microsat amateur satellites by Matjaz Vidmar.
You can try contacting AMSAT for more info about that, but I have heard
before that there seems to be a documentation problem around those
transmitters.

>b) What are typical input-to-radiated efficiencies for the antennas
> available to use for each frequency?

The antennas may cause you more problems than the transmitter. It
already is difficult to make a good omnidirectional antenna, and you
are posing all kinds of restrictions.
Any solution with arrays usually introduces nulls in the pattern, so
you will have to have an estimation of the spinrate to get an idea
of the effect this will have on the reception (given the characteristics
of the forward error correction protocol).

>From other discussions on and off this newsgroup, I expect I will need
>at least 0.5W from LEO (400 Km orbit) to have a prayer of sending 4800
>baud to the ground with any reliability.

That sounds about right. The more, the better of course. Many amateur
satellites (usually in somewhat higher orbits) work fine with omni radiated
output power in the 1-5W range.

>What transmitter-antenna combinations are possible? I'm mainly
>interested in the antenna problem, since I hope to have access to some
>state-of-the-art miniaturized transmitters.

Have they been designed with DC-to-RF effiency in mind?

Does anyone have an Extender board for a Heathkit SB104? A friend of mine was given a partially completed 104 and has it finished but needs the extender to do the alignment. Heathkit part number is 85-1465. Thank you.

George in Phoenix

The usual thing: a lot of messages during the first two weeks, where
everyone said how wonderful it would be. Not much thereafter.

You probably subscribed too late to catch it.

Given all the problems aboard MIR (and the possibility they will have
to evacuate due to the coolant leaks), I'd guess it will be unlikely.

>The station can be kept up without a crew if I'm not mistaken.

If I'm not mistaken, MIR has been abandoned before and re-inhabited. I recall reading a story about the mission to go back up and recover the station. There were a lot of problems from the cold and I think the electrical system had failed causing the cosmonauts to leave because they couldn't maintain a liveable temperature. Anybody else have the details on that?

I don't think the Russians are planning on letting Mir become another Skylab, although with their funding troubles they might not have the choice.

Dave, which mode(s) are you trying to use on FO-29?
Also, which software/terminal program are you trying
to use, and do you have the callsign correct? (Dumb
question, perhaps, but it caused me some trouble!)
How are you setting modes of the TNCs before trying
the uplink?

I have the same TNCs, and I have been successful in
the 1200 bps mode.

Source record: 19036

MIR has been continually inhabited since it's launch in 1986. It has survived well beyond it's projected lifetime, and had the Soviet Union not gone belly-up, would have been replaced with MIR2. The abandoned space station which was recovered for operation was Salyut 6. THe recovery was just short of a miracle, but the space station was eventually deorbitted into the Indian Ocean in a controlled burn.
One of MIR's less well known problems is the amount of flexure in the structure due to gravitational differences over the planet. I wouldn't expect a great deal of amateur radio upgrading on the station in the near future, but I'd expect a heck of a good amateur platform on the I.S.S., assuming it does get launched into orbit. Again, the hangup is with the Russians, who can not deliver the central core unit they promised.
Something to watch for is whether the segments of MIR, that is the Kvant module, Kristall, and others will be doorbitted with the rest of the station. NASA is still planning for the "Atlantis" mission to dock with MIR, so I think they must know something about it's status that the rest of us don't (I would hope so).
MIR has just been boosted into a higher orbit, but needs periodic pushes to keep it from interacting with the Earth's atmosphere. This will be true of each station put into low-earth-orbit, including ours.

SB SPACE @ ARL $ARLS013
ARLS013 STS-83 refly is a "go" for July with SAREX on board

ZCZC AS13
QST de W1AW
Space Bulletin 013 ARLS013
From ARRL Headquarters
Newington, CT April 25, 1997
To all radio amateurs

SB SPACE ARL ARLS013
ARLS013 STS-83 refly is a ''go'' for July with SAREX on board

Word from NASA this week is that shuttle mission STS-83--cut short in early April because of a fuel cell problem aboard the spacecraft--will be reflown in July with the Shuttle Amateur Radio EXperiment--SAREX--aboard. The new mission will be dubbed STS-94. The space shuttle Columbia prematurely returned to Earth April 8 without making any of the scheduled QSOs with 18 schools in the US, the People's Republic of China, and Japan. Sixteen schools want to arrange new schedules for the July mission, which will again carry the microgravity science lab. Three hams were aboard STS-83: Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF. The same crew likely will be tapped for STS-94, set to launch on July 1 for a 16-day mission.

In the meantime, more QSOs of a scheduled round of ten MIREX school contacts have taken place with Jerry Linenger, KC5HBR, aboard the Russian Mir space station. Students at Holy Angels School in Dayton, Ohio, got a chance to chat with Linenger April 21. The ground station, W8DOZ, was running 35 W into a turnstile antenna. On April 23, students at Jerling Junior High School in Orland Park, Illinois--a Chicago suburb--had a 10-minute contact with Linenger. More than a dozen students got to speak directly to Linenger as an audience of 800 students and 200 visitors looked on. Nearly 2500 students in other schools also got to listen in.

Linenger and his cosmonaut flight companions, Mir-23 Commander Vasily Tsibliev and Flight Engineer Alexander Lazutkin, managed to restore one of two Elektron oxygen generators aboard Mir. The repair ended a serious problem for the Russian space outpost. The three used equipment shipped to Mir April 8 aboard a Progress resupply rocket. With the Elektron electrolysis system at least partially back in operation and the Mir's primary carbon dioxide scrubber also operational once more, the air aboard the Mir is healthier than it

has been in weeks. Because the system is not producing oxygen at a rate sufficient for three crew members, however, the crew is supplementing the Mir's atmosphere with gaseous oxygen. The Mir also has a healthy stock of oxygen-generating candles to use if necessary. Wire service reports say the Mir crew has, for the time being, given up efforts to track down an elusive cooling system leak that's allowing ethylene glycol coolant to leak into the atmosphere of one spacecraft module.

NASA reportedly intends to go ahead with plans for astronaut Michael Foale, KB5UAC, ADD to replace Linenger in mid-May. Foale, who will arrive on the shuttle Atlantis, is scheduled to be replaced in September by astronaut Wendy Lawrence, KC5KII. The last US astronaut scheduled for a tour of duty on Mir is David Wolf, KC5VPF, in early 1998. The 11-year-old Mir space station eventually will be replaced by the International Space Station--a cooperative venture between Russia and the US.

1997 CONNECTICUT QSO PARTY - OPERATING RULES

Connecticut QSO party, sponsored by the Candlewood ARA, 2000Z May 3
until 2000Z May 4, with a rest period 0400Z - 1200Z. Phone, RTTY and CW.

Work stations once per band and mode, mobiles as they cross county
lines. No repeater QSOs.

Single operator, fixed/mobile, Novice, QRP(5W), Multi-single
Multi-multi
classes plus Connecticut club competition.

Connecticut stations may contact other Connecticut stations for
QSO/multiplier credit.

Connecticut stations exchange report and county; others exchange
report
and state/province/DXCC country. Non CT stations work CT stations only.

CW - 40 KHz. up from lower band edges; Novices 25 KHz. up from low
end;
Phone - 1.860, 3.915, 7.280, 14.280, 21.380 28.380. VHF - 50.150,
144.200,
146.580. RTTY - Normal RTTY Bands . All bands (HF,VHF, UHF) except
WARC bands count.

Score one point per phone or RTTY QSO and two points per CW QSO.
QSOs
with club station W1QI and ARRL HQ station W1AW count 5 points.

Connecticut stations multiply QSO points by states/
provinces/Connecticut
counties worked (DX only one multiplier); others multiply by Connecticut
counties worked (work CT stations only).

Plaques and certificates (100 point minimum). Special certificate
for
working all 8 Connecticut counties.

Send entry and SASE for results by June 3 to CARA, P.O. Box 3441,
Danbury CT 06813-3441

1382. letter campaign to increase NASA funding

Newsgroup: rec.radio.amateur.space
Date: 1997-04-26 00:00:00 UTC
From: ahouts@aol.com
Message-ID: <19970426203000.QAA00810@ladder01.news.aol.com>
Source record: 19040

URGENT! PLEASE READ, RESPOND, and FORWARD !!! -Amy

I would like to invite you all to join my national letter writing campaign to VP Al Gore, asking he appropriate more funding to NASA. This non-political, non-scientific "We, the People" letter went live 11 Feb, and so far over 12,000 people have submitted signatures. This is a fabulous response, but it just scratches the surface! I'm giving an extra push to reach 20,000 by May 22nd, Space Day, then tell the press.

The politicians think in votes, and it's our obligation to make our leaders aware of what issues are important to us! All of us who care about space; exploration, technology, spin-offs - I could go on and on - should sign the letter! We MUST let them know that we care. I wrote it to make it easy for everyone to just click on then submit.

You can find the letter a number of places. Through the web sites of Astronomy and Sky & Telescope Magazines.

For world wide access URL
http://pages.prodigy.com/stargazer Scroll down, click on letter.

Or at AOL, the Action Alerts Section of Space Exploration Online.

From: Chris Lewicki <chrisl@seds.lpl.arizona.edu>
Message-ID: <5ju4phhdk1@news.ccit.arizona.edu>
Source record: 19044
Cross-posted to: linux.dev.hams,rec.radio.amateur.space

Hi,
Has anyone out there modified SatTrack to address the Yaesu
FT736 via the serial interface, or have other code to command radios
via Linux? I've found the appropriate section in satctrl.c, but it
surely needs modification.
In particular, I'm interested in finding out how to set the
baud rate, start/stop bits, parity, and how to form the
bytecode/opcode stream.

Thanks.

How do they number space shuttle flights? They must not be in alphabetical order, since the SAREX refly this summer will be dubbed STS-94.

Thanks,
Tim Whitcomb, AB7LP

When a shuttle mission is about 18 months to launch, it recieves the next unassigned STS number. NASA is not interested in whether this numbering sequence gives the actual launch order -- the STS number is primarily used for internal planning and documentation, and all that is needed is some unique designation. In this case, since the reflight was added with short notice, the next available number (94) is similar to the missions that are presently about 18 months from launch. (I don't have a current manifest, but at 7 launches per year, 1.5 years = 10 or 11 flights with numbers assigned; 83+10.5=93.5, which is pretty close.)

If you look on a manifest, you will see numbers farther ahead than 18 months. These numbers are considered provisional and often slide and shift as the manifest is re-evaluated and missions become more clearly developed. There comes a point, however, when the number is locked down to a particular flight. (I should note that this period was 18 months a few years ago, I haven't checked lately to see if the time period changed. Also the space station delays are altering the manifest and probably free up some STS numbers.)

As you ar eposting to this group, how about first getting some funding
for AMSAT? They need some more money for Phase 3D, and the amount must
be peanuts when compared to NASA funding.

Rob

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up satellite schedules to contact hams all over the world.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

Visit http://www.sarrio.com and estabish your own cybersched

You intercepted DOVE, also known as DO-17. DOVE sends telemetry earthward for analysis by amateurs and students. It occasionally carries a digitally encoded voice message. DOVE is a cube shaped amateur bird, measuring about 8inches on each edge. She's afaithful little thing, and has crashed several times, yet always stuck around for revival.

The DOVE - 17 satellite. No uplink. Telemetry only. Fun to listen to and decode. Put up for educational purposes. Excellent little sat!

I believe UO-11 is also still on this frequency, with 1200 baud ASCII teletype (inverted tones). The actual freq is a bit different, but not enough so you can tell with a scanner or handheld rig having no discriminator meter.

1400. SatTrack v3.1 distribution?

Newsgroup: rec.radio.amateur.space
Date: 1997-04-28 00:00:00 UTC
From: cvoid@netcom.com
Message-ID: <cvoid-2804970953470001@axolotl.macromedia.com>
Source record: 19058

Greets... seems I managed to trash the TLE and data files for my SatTrack v3.1 install. Now, whenever I update my TLE's using the gettle script, I get a whole bunch of errors.

Anyways, I can't seem to find a generic source distribution anywhere in order to acquire a fresh set of data files. Used to be available via Bester's web site, but it has dissapeared.

Anyone know where I can find a copy? Not the HP/UX port, either...

Thanks in advance!

1401. NORAD Two-Line Orbital Element Sets (TLE987)

Newsgroup: rec.radio.amateur.space
Date: 1997-04-28 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5k2uol$t5p@blackbird.afit.af.mil>
Source record: 19059

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

SB freqs @ amsat $FREQ04.28
Amateur CW/Voice Satellite Frequencies for April 28, 1997.

BID: $FREQ0428
-------------------------------------------------------------------
Name Mode(s) Frequencies Beacon(s)

AO-10* B Uplink 435.030 - 435.180 CW/LSB
Downlink 145.975 - 145.825 CW/USB 145.810 CW

RS-10/11 A Uplink 145.865 - 145.905 CW/USB
Downlink 29.360 - 29.400 CW/USB 29.357 CW

RS-12/13 KT Uplink 21.210 - 21.250 CW/USB
K Downlink 29.410 - 29.450 CW/USB 29.408 CW
T Downlink 145.910 - 145.950 CW/USB 145.910 CW

RS-15* A Uplink 145.858 - 145.898 CW/USB
Downlink 29.354 - 29.394 CW/USB 29.3525 CW 29.3987 CW

RS-16* A Uplink 145.915 - 145.948 CW/USB 435.504 CW 435.548 CW
Downlink 29.415 - 29.448 CW/USB 29.408 CW 29.451 CW

FO-20 JA Uplink 146.000 - 145.900 CW/LSB
Downlink 435.800 - 435.900 CW/USB 435.795 CW

AO-27 J-FM* Uplink 145.850 FM
Downlink 436.800 FM

FO-29* JA Uplink 146.000 - 145.900 CW/LSB
Downlink 435.800 - 435.900 CW/USB 435.795 CW

MIR Simplex* Uplink 145.200 FM
Downlink 145.800 FM

SAFEX Repeater(Mir)*
Uplink 435.750 FM subaudible tone 141.3
Downlink 437.950 FM

SAREX Simplex (Space Shuttle)*
Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
use the satellite if the beacon frequency wavers, or if downlink signals
```

chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse.

The chances of damaging AO-10 by uplinking during "FMing" are probably remote. The caution mainly stems from a theoretical consideration. AO-10's latching relays are set to the omni antenna and the transponder is on in Mode-B configuration. This all turns out to be perfect since we can't control the attitude, etc. Each time there's a power spike the chance exists that the IHU could have a "seizure" and blurt out a pulse to switch the antennas to higain, switch the transponder off or whatever. Of course these spikes occur every time we come out of eclipse, but the idea is to do what we can to minimize the number of power spikes. Occasionally spikes have "activated" the IHU in the past and caused the beacon to send out nonsensical data rather than the current constant carrier for short periods of time. ..and it isn't clear when AO-10 switched to the omni antenna, so I guess such things may have happened in the past.

I suppose there are also some considerations regarding the effects on the transponder of operating it so far off its normal voltage/current curve, but, again, this doesn't seem to have caused a problem after many years. <thanks to Stacey E. (Chuck) Mills W4SM for this explanation>

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective method for using this satellite.

* Radio Sport-16 currently has its Mode A transponder turned off. The 435.504 beacon is the only one currently being copied. Reports out of Russia speculate that the transponder may be turned on for amateur use sometime in late May or June.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Digital mode until April 25. Here is the latest schedule:

Apr.25(Fri) 01:24z JA
May 2(Fri) 10:26z JD 1200bps
9(Fri) 00:57z JD 9600bps
16(Fri) 01:35z JA
23(Fri) 00:29z JD 1200bps
30(Fri) 01:07z JD 9600bps

* Mir Simplex and SAFEX are still offline as of time of writing although official reports have stated that the emergent situation from coolant leaking into the space station has been relaxed somewhat and the immenent evacuation of the station seems less likely at this time.

* Space Shuttle Frequencies when in orbit. Next SAREX mission tentatively set for July 1997.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 2M

Mode T: Uplink 15M
Linear Downlink 2M

Can I ask a couple of,perhaps naive questions?

1...isn't LEO intended for commercial use? and aren't its proponents
looking at trying to grab amateur spectrum for it?

if yes then

2...being commercial how can you justify or even contemplate using an
amateur band?

and

3... you want to pay a ham for using amateur radio? Isn't that a
violation of th regulations.

Just my $0.02

Not in particular. Anyone who can safely launch a satellite can put
one up. Commercial, Government, or Private individual, makes no
difference (ref. Space Act of 1958(?) and the Geneva and UN Accords).

> if yes then
>
> 2...being commercial how can you justify or even contemplate using an
> amateur band?

Simple. We're not commercial. Re-read the original post: Most of the
work is being performed under the sponsorship and auspices of the
University of California, in partnership with Tether Applications, who
is providing the fundamental technologies and mission description.
The funding will likely be a collection of grants, SBIR awards, and
partnerships with other public and private institutions.

I never said we'd "pay" anyone to gather data for us! I did say that a contest would be sponsored, the goal of which is that the Ham who can keep his rig trained on our tiny satellite, successfully record the telemetry, and relay the data to us first will receive a REWARD for his efforts. Hams do it all the time! Though if cash is a problem, a gift certificate to Ham Radio Outlet could be easily arranged.

1405. CT QSO Party This Weekend - Work W1AW !

Newsgroup: rec.radio.amateur.space
Date: 1997-04-28 00:00:00 UTC
From: KD1YV <jimkd1yv@ix.netcom.com>
Message-ID: <3365272C.63AF@ix.netcom.com>
Source record: 19063
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc

1997 CONNECTICUT QSO PARTY - OPERATING RULES

Connecticut QSO party, sponsored by the Candlewood ARA, 2000Z May 3
until 2000Z May 4, with a rest period 0400Z - 1200Z. Phone, RTTY and CW.

Work stations once per band and mode, mobiles as they cross county
lines. No repeater QSOs.

Single operator, fixed/mobile, Novice, QRP(5W), Multi-single
Multi-multi
classes plus Connecticut club competition.

Connecticut stations may contact other Connecticut stations for
QSO/multiplier credit.

Connecticut stations exchange report and county; others exchange
report
and state/province/DXCC country. Non CT stations work CT stations only.

CW - 40 KHz. up from lower band edges; Novices 25 KHz. up from low
end;
Phone - 1.860, 3.915, 7.280, 14.280, 21.380 28.380. VHF - 50.150,
144.200,
146.580. RTTY - Normal RTTY Bands . All bands (HF,VHF, UHF) except
WARC bands count.

Score one point per phone or RTTY QSO and two points per CW QSO.
QSOs
with club station W1QI and ARRL HQ station W1AW count 5 points.

Connecticut stations multiply QSO points by states/
provinces/Connecticut
counties worked (DX only one multiplier); others multiply by Connecticut
counties worked (work CT stations only).

Plaques and certificates (100 point minimum). Special certificate
for
working all 8 Connecticut counties.

Send entry and SASE for results by June 3 to CARA, P.O. Box 3441,
Danbury CT 06813-3441

Speaking as a non-expert, I don't see any insurmountable problem. My understanding is that the transmitter must be nominally "controlled" by a licensed amateur and there may be some sort of FCC approval / coordination required (at least for permanent, repeater-type operation, which this isn't :).

This is kinda, sorta like the high-altitude ballons hams send up occasionally. Temporary, but just a little higher. They send back telemetry, sometimes pictures, and sometimes they carry a repeater. I don't believe they require any FCC notification.

If there are no licensed amateurs in your group, the no-code tech exam should be a no-brainer to anyone with a technical background.

As far as cash rewards for data collection contest goes, well, hams are crazy. The ones who are serious would do it for the challenge, for the ones who aren't serious $100 isn't enough. In my opinion, recognition would work as well or better than cash. A certificate, or a mug, or a writeup in QST, for examples.

Good luck.

I am playing at present with Wisp, a 2nd hand 736R and a lent KCT. I have been able to configure the whole in order to correct the doppler shift and receive information (no good antennas yet, no preamplifier yet) from UO-22, and KO-23 and KO-25. I am trying to configure the DO-17 sat. I have defined the U/L and D/L freqs to be 145.825 but when the pass begins, it still use mode J and doesn't use the freq's I have put.

Any ideas?

I'm KE6RGA, and we're already looking into FCC/ITU regulations. Looks
like if we keep our satellite radiated power under 100mw, no license of
any sort will be required!

But can anyone hear 100mw if our frequency is "somewhere" in the range
of 0.140-2.500 GHz?

> This is kinda, sorta like the high-altitude ballons hams send up

Turns out that we hope to "pre-flight" some future hardware on baloons!
The Antarctic circum-polar missions will allow us to not only recover
the hardware, but will expose the payload to LEO-like radiation levels.

> If there are no licensed amateurs in your group, the no-code tech exam
> should be a no-brainer to anyone with a technical background.

I think we have a new student member who is a ham as well.

1409. New nanosat needs UPlink - help on receivers

Newsgroup: rec.radio.amateur.space
Date: 1997-04-29 00:00:00 UTC
From: Sameer Samat <ssamat@ucsd.edu>
Message-ID: <3366DFB0.2E6DB53E@ucsd.edu>
Source record: 18978

I'm working on a small (10 - 15 cm spherical satellite) for The University of California, San Diego. We've been concentrating on our downlink systems for a while now, however it just became apparent that we may also need an uplink.

Some team members and I were thinking that a small, low power receiver would be pretty easy to setup on a satellite this tiny. Would the same technology used in pagers do the job? Those run on a AAA battery for a month or so, without any problems ,and their reception is pretty good.

What kind of data can be sent across such a link? Or can ANY kind of data be sent? (I'm not a radio expert ... you'll have to forgive me)

what frequency would such a receiver work on?.. or is that configurable as well?

Thanks for all the help

Sameer Samat

It may also have been Uosat 11 on 145.826 MHz. This sat sends
ASCII Telemetry too. Good luck.

Dean:

The abbreviation LEO = low earth orbit. Period. It has no connotations of commercial or otherwise. No doubt the confusion arises from the references to "Big LEO" and "Little LEO" commercial comms systems, of which the latter has been in the news lately.

We are two students at the Space Engineers program in Kiruna, Sweden, and we are right now working on our degree project. The goal of this project is to create a practical in satellite groundstation-technique. For this we are going to track a number of amatuer satellites (both existing and future) and download their housekeeping telemetry and then display the data in the practical.

Now to our problem: For this practical to work we need to know how the telemetry data is encoded and transmitted. We have searched all over the Internet but can only find information on frequencies and radio repeaters. Do you think you can help us to find out what we need to know?

Information on the degree project can be found on the following adress:
http://www.ryp.umu.se/~asset/tech/

Dove (DO-18, 145.825) is still operational as far as I can tell... there are other satelites you could try. THe one that comes to mind is the russian space station Mir (70cm downlink at 437.950 +- doppler).

Robert W. Cunningham wrote:

> Well, we need to operate the transmitter for about three months using
> only 4 alkaline "D" cells!

I first have a comment about the battery arrangement. I think your assumptions about capacity are too optimistic. No doubt you have done your homework on the batteries selected. However, for the benefit of others, I will quote from Duracell:

"The alkaline-manganese dioxide system is best suited for use over a temperature range of -4 F to 130 F (-20 C to 54 C). At lighter loads, some output can be obtained at temperatures as low as -20 F(-30 C). Actual service depends on cell size and current drain. For most cells, up to 75 percent of the rated capacity at room temperature can be delivered at 32 F(0 C)."

Components in space can get extremely hot and cold. General purpose batteries are designed to operate at about 70 deg F. High temps (over 110 deg F) can and will significantly degrade battery life, although this is less of a problem for alkalines than zinc-carbon. The rapid cycling between high and low temp extremes can quickly kill your batteries, too. Have you estimated internal temps yet?

Also, low temps will really impact the terminal voltage and capacity. Anyone who's tried to take photos or to use their HT outside in the winter can testify to that. At freezing (32 deg F), the terminal voltage will be about 1.45V. Not bad. But suppose the internal temperature is at or below 0 deg F, something not entirely unlikely. I'm gonna guess the terminal voltage will be something like 1.2V or less.

I'm not saying alkaline is not the way to go (especially considering the project constraints). Just be careful when you estimate capacity.

> Here's a list of some of our constraints:
> 1. Transmit window of 3 minutes 6 times each month.
> - Each data set contains 5 days of data, AVERAGE, maybe more
> depending on the overhead pass schedule.

I second Rob's comments about overhead passes being less than optimal, especially for omni antennas. High-gain tracking antennas make this less of an issue, however.

> 10. The antenna must fit entirely within the sphere (though it may by
> flush with the surface if it conforms to the spherical shape).

Say, what's the surface of this sphere supposed to me made of?

> a) What are typical electrical-to-RF efficiencies for various
> transmitters on each frequency available to us?

At VHF (145 MHz), you can expect about 50% efficiency. At L-band (1296 MHz), estimate about 20%. With additional losses, _slightly_ reduced battery capacity, proper matching network design, etc., you can probably reasonably expect 0.5W output into the antenna based on my quick calculations.

> b) What are typical input-to-radiated efficiencies for the antennas
> available to use for each frequency?

I think you're a little too worried about antenna efficiency here. I don't see it as much of a problem, since in no case is the antenna likely to be physically short compared to wavelength; i.e., you're not designing a mobile HF antenna. :-)

> From other discussions on and off this newsgroup, I expect I will need
> at least 0.5W from LEO (400 Km orbit)...

That's about right. Mileage may vary. :-) Results will depend on the modulation scheme, too.

Just a start...

You can find information on RS-15 telemetry here:
http://www.amsat.org/amsat/ftp/satinfo/rs/rs15tlm.txt

Although AO-13 is dead, you can find the TLM specification here:
ftp://ftp.amsat.org/amsat/satinfo/ao13/spec_tlm.doc

You can find descriptions of protocols used on the PACSATs, including
whole orbit data (WOD) here:
ftp://ftp.amsat.org/amsat/satinfo/pacsat/pacdoc.zip

Spend some more time at the AMSAT-NA home page and follow the links.

Good luck.

Good Morning Sameer from Sunny San Diego
You can find a detailed technical explanation of AX.25 at the ARRL
Pages, try URL:
http://www.ve7tcp.ampr.org/Packet/ax25-v2.html

For a more general discussion of the use and operation of Packet Radio,
see the links on the AC6V Ham and DX Reference Guide below.

Go to index -- click on "Packet" -- ther you will find several links to
Packet Radio. See Larry Kenny's excellent tutorial.

AX.25 is the standard X.25 link-layer protocol specification slightly
modified for amateur packet radio.

From the specification:

"In order to provide a mechanism for the reliable transport of data
between two signaling terminals, it is necessary to define a protocol
that can accept and deliver data over a variety of types of communications
links. The AX.25 Link-Layer Protocol is designed to provide this service,
independent of any other level that may or may not exist.

The complete document is available at
ftp://ftp.tapr.org/tapr/general/ax25.doc

Check out http://www.tapr.org for general packet radio information.

Good luck.

Well, I'm no expert either, but that never stopped me from having an
opinion :).

Could you make a command receiver small enough to fit in your nanosat, say, about the size of a pager? I'm certain it can be done. Could you run it for three months (I think someone mentioned three months in a previous post) on batteries? Mmm, that's going to be tough. Just a thought, I know you want a spherical design for uniform drag, but maybe you could put some facets on the surface for mounting solar cells for recharging NiCds? Perhaps a uniformly faceted design?

Standard packet radio baudrates in the VHF and UHF amateur bands are 1200 and 9600 baud. You can go higher than that, but you need increasingly sophisticated modem design.

Typically you could use the satellite subband within the 2-meter band (about 145MHz) for uplink and the satellite subband within the 70-cm band (about 435 MHz) for downlink, or visa-versa. Putting the uplink and downlink in separate amateur bands simplifies the shielding between the transmitter and receiver. You would want to coordinate the exact frequencies with what is already in orbit.

I think (in my humble opinion), your biggest problems are going to be power and antennas. Even using the transmitter as little as possible, I think power is going to be very tight, that's why I suggested the use of solar cells if at all possible. And any antenna somehow built into the surface of the satellite I think is going to be fairly directional, which makes sending and receiving data from a tumbling satellite problematic. But I don't know.

Just a couple of suggestions. Have you tried getting in touch with any amateur radio club on campus? The sophistication of college radio clubs varies of course, but they may already have equipment in place for amateur satellite communications.

I seriously recommend getting a amateur radio, no-code tech license. Somebody on your project is going to need one if you're going to use amateur frequencies for uplink and downlink. Preferably more than one someone. It's not that tough.

Also you might get in touch with AMSAT-NA at http://www.amsat.org. They've been designing, building, and flying amateur satellites for over twenty years. In particular, check out their Microsat design.

Good luck.

It appears that AO10 has entered one of its periods where it is
partially shadowed from sunlight. Since it has no working batteries,
signals are totally dependent upon the amount of sunlight received. I
have noticed it's signals are rather weak lately, with some FM'ing of
the 145.808 beacom, a sure sign of limited power. I suggest that we
just monitor it until it returns to a more favorable orientation
relative to the sun. This may be only a week, or several months.

The following message from Bill Brown, WB8ELK, provides the details
for the re-scheduled HALO Rockoon flight.

Gene W3PM GM4YRE
Huntsville, AL
mmarcus@hiwaay.net
w3pm@amsat.org

HALO Rockoon Flight

Location: Hampstead, NC (20 miles northeast of Wilmington, NC)
Date: May 3rd
Time: 6:15 am EDT (Balloon liftoff)
Time: any time after 8:15 am EDT (Rocket Launch from 105,000 feet)

Transmitters:

On Rocket:

Callsign: KE4ROC
1280 MHz FM ATV (3 watts into vertical antenna)
441.050 MHz FM (packet radio with APRS formatted GPS data)

Coverage range: 700 miles from apogee (entire East Coast, Southeast and
part
of Midwest)

On Launch Gondola:

Callsign: WB8ELK
434.00 MHz AM ATV:(live color camera view of rocket liftoff)
Horizontally
polarized.

Coverage range: 400 miles at launch altitude.
(Southeastern states and on up to New Jersey and Pennsylvania.)

HF coordination nets:

3.871 and 7.155 MHz... W4HTB and WA3USG net controls.

Raindate: May 4th or following weekend.

web site: http://fly.hiwaay.net/~bbrown/

VHF FM receiver boards have been repackaged and flown in space. A
motorola board flew on AO-27, and repackaged HT boards have been flown
on other small LEO satellites.

> > What kind of data can be sent across such a link? Or can ANY kind of

1200-9600 bps FSK or MFSK (Macnhester-encoded) data goes across fine.
Slower data rates requrie fewer modifications to the radios but is
likely not a big issue in this situation.

> > data be sent? (I'm not a radio expert ... you'll have to forgive me)

You're going to need one. (not being snide, speaking from experience.)

> > what frequency would such a receiver work on?.. or is that configurable
> > as well?

There are several frequency bands authorized for satellite
communications. Scientific/research satellites use 137 MHz, there's
aband around 150 MHz, and another around 441 MHz I believe. Amateurs
use 145, 435, and 1269 (or is it 1296?) Mhz. US amateurs could probably
use 220 MHz at least as an uplink band, it's not in general usage
beacuase it is not available world-wide.

I would emphatically NOT recommend using VHF (140-150 MHz) as an uplink
if South America and the Carribbean are going to be in the footprint
during satellite commanding. There is a great deal of unlicensed
"pirate" VHF operations in these regions, you can hear this on the
downlinks of amateur birds with 145 MHz uplinks (AO27, FO20, FO29).
Uplinks in the commercial/scientific bands are probably better but are
not clean, either. You will need some software "keys" so that the
command system ignores all data (or noise that gets decoded as data)

transmissions that don't have the correct coding - otherwise you're open
to uncontrolled commanding or random noise-induced events.

> Could you make a command receiver small enough to fit in your nanosat, say,
> about the size of a pager? I'm certain it can be done. Could you run it for

The motorola VHF decks are tiny. I don't recall if crystal-controlled
boards are still available. They were becoming tough to find three
years ago. I'm not sure I would trust a programmable frequency receiver
for my command circuit.

> three months (I think someone mentioned three months in a previous post) on
> batteries? Mmm, that's going to be tough. Just a thought, I know you want a

The command receiver should be on 24x7; there have been a number of
well-known (and not so well-known) satellite failures becuase the
command receiver failed to activate OR it was accidentaly shut off!

I don't think a paging receiver has the specs (sensitivity, selectivity,
frequency stability) to be a good command receiver. This is worth some
testing. Look at finding a small commercial VHF or UHF receiver deck,
test it thoroughly (esp. under varying temperatures) and repackage it.
Limited receiver performance (dues to antennas, etc.) can be compensated
to some extent by improving the command station's performance.

> Typically you could use the satellite subband within the 2-meter band
> (about 145MHz) for uplink and the satellite subband within the 70-cm band
> (about 435 MHz) for downlink, or visa-versa. Putting the uplink and
> downlink in separate amateur bands simplifies the shielding between the

Yes. Dove ran into major problems with uplinks and downlinks on the
same band, I recall. In spite of my comment on NOT using 2M uplink, it
has the advantage that the 3rd harmonic of the transmitter is not going
to bother the satellite's reciever.

> transmitter and receiver. You would want to coordinate the exact
> frequencies with what is already in orbit.

Required by ITU regs anyway.

> I think (in my humble opinion), your biggest problems are going to be power
> and antennas. Even using the transmitter as little as possible, I think

Power budget is a problem on most satellites. Probably more than
weight. There's also the question of link requirements, especially if
there is now an uplink to worry about.

> cells if at all possible. And any antenna somehow built into the surface of
> the satellite I think is going to be fairly directional, which makes
> sending and receiving data from a tumbling satellite problematic. But I

I'm not an antenna engineer, but I'd guess that's the case as well. A
full-size mock up could be easily built and tested on a home-made
antenna range, just like AMSAT has done in the past.

The suggestion to get hooked up with the local ham club on campus and get someone on the team licened is a good one. You can build up expereince with satellite operations using the amateur and weather satellites, especially for the niceties of telemetry download and analysis on a schedule. (If the satellite is overhead at 1AM, SOMEONE had better be in the command station, unless it's fully automated and you just want to capture telemetry)

BTW, Bobb Twiggs, who had a hand in the Microsat development when he was in Utah, is now a professor at Stanford and is involved in small satellite development. You might try contacting him (I assume Stanford and UCSD are on speaking terms <grin>).

There is an excellent textbook treatment of all aspects of satellite design by Wertz (I forget the title - "spacecraft design or something like that comes to mind). If you're team doesn't have a copy, GET ONE. Excellent resource.

Sure wish we had hands-on projects like this when I was in school.

MONDAY APRIL 28, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* MIR NEWS *
============
The Russian-American crew on Russia's 11-year-old Mir space station are
struggling with a leak of antifreeze vapor and may have to abandon ship,
mission control said last week.

Spokesman Viktor Blagov said that at the moment there was no reason to
evacuate Mir, but added: "The team is continuing its repairs. It's a
difficult task and if it cannot be solved Mir might be abandoned by the
cosmonauts."

Speaking from space, NASA astronaut Jerry Lineger said he and his two
Russian colleagues had almost abandoned ship twice in the past few months.

Blagov, deputy head of the flight program, said the cosmonauts had repaired
two leaks in the cooling system with special glue but had yet to find a third
through which antifreeze was escaping into Mir's air supply.

"It's on the limit of what is acceptable," he told a news conference, adding
that it was not clear how dangerous the concentration of antifreeze vapor
was.

"We immediately told NASA about the defects on the station and the American
specialists are kept continually informed about what is happening on Mir,"
he added.

He said an urgent evacuation of the cosmonauts could be ordered from ground
control or by the space station commander.

"That could happen if there's a big fire on the station or if there is
decompression," Blagov said, adding that the men could reach Earth in an
hour using the Soyuz rocket which is now docked with Mir.

"Mir orbits Earth 16 times in a 24-hour period. Three of them are over the region of the launchpad in Kazakhstan, where everything is ready for a search for the cosmonauts," he said.

The Mir crew could also return to Earth in any other orbit, he added. "But in that case the place of touchdown could be in France, Ukraine, Britain, Asia or the United States."

The leaks, which occurred during the past month, are the most serious so far on the station, which has also suffered four fires while in orbit, the last in February.

Blagov said that leaks had been caused by electric cables touching the pipe carrying anti-freeze to the cooling system. He said that 1.6 liters of antifreeze had leaked out. A liter is about a quart.

In the Kvant module where the main cooling system equipment was, the temperature had soared to between 79 to 88 degrees, which was bad for the cosmonauts trying to carry out repairs and could damage equipment for scientific experiments stored there.

Igor Goncharov, specialist for medical emergencies on the orbiting station, said the crew's morale had been hit by the high temperature and stress suffered by the cosmonauts as a result of a fire Feb. 23.

"They complained of insomnia but an analysis of their blood and urine did not show any abnormalities in their organisms," Goncharov said, adding that the men had interrupted their sleep patterns by working through several nights.

"Now they have been given strict instructions to go to bed at 11 p.m. and wake up at eight in the morning," Goncharov said. The cosmonauts had also resumed their physical exercises.

In four of Mir's six modules, living conditions were normal. "The team spends most of its time in safe sections," he said.

* JAY APT RETIRES *
==========
Four-time Shuttle astronaut Jay Apt, N5QWL, will leave NASA in late May to become director of the Carnegie Museum of Natural History in Pittsburgh, PA.

"The astronaut office will miss Jay's dedication and spirit," said David C. Leestma, director of Flight Crew Operations. "I am sure he will use this new position to continue his efforts to educate and inspire young people to excel."

Apt first flew on STS-37 on Atlantis in 1991, conducting two spacewalks, including one unscheduled EVA to deploy manually the antenna on the Gamma Ray Observatory spacecraft. He flew twice on Endeavour, during STS-47 in 1992 for the Spacelab-J mission, and again for STS-59, the first flight of the Space Radar Laboratory in 1994. Most recently, Apt flew aboard Atlantis on STS-79, the fourth Shuttle-Mir docking mission, in 1996.

"Every minute that I've been a part of the space exploration program has been fascinating" said Apt. "I am delighted to have had the opportunity to fly around our planet hundreds of times, and now it is time to give something back to the people who sent me there. I am thrilled by the chance to return to Pittsburgh and lead one of the best museums in America into the next century. Providing an exciting environment for both families and scientists to learn about this planet is going to be the most challenging and interesting job I can imagine doing."

[Info via NASA]

* NORTH TEXAS BALLOON FLIGHT #7B *
==========
The seventh mission of the North Texas Balloon Project finally took to the air at 10:14 a.m. on 19 April 1997 from the Cleburne, TX Municipal Airport. Two hours later, it had a soft landing in a pasture near Italy, TX and was recovered by NTBP personnel within 30 minutes. The launch was delayed from its scheduled time of 9 a.m. by 1) local winds aloft data not being available, and 2) unexpected burst of the first balloon during inflation, the cause of which was unknown, but the parachute spreader ring, swivels and woven tow line allowed a nice easy descent.

The GPS experiment experienced two separate difficulties during the flight. The Delorme Tripmate GPS receiver failed to maintain track on enough GPS satellites to provide accurate altitude data. In fact, the entire altitude data set was suspect and finally disregarded. However, the Tripmate did provide accurate Latitude and Longitude data. The other difficulty was related to the GPS beacon transmitter itself. The Yaesu FT-530 output power level dropped to near zero at 75 minutes into the flight. It has not been determined why the HT power dropped, but extremely cold temperatures are a likelihood.

The FM crossband voice repeater was the highlight of the mission. The following locations were able to hear and/or work through the balloon. In Texas, Ft. Worth, Dallas, Houston, Plano, Irving, San Angelo, San Antonio, Kerrville, Newberry; Clovis, NM; in Louisiana, Shreveport and Bossier City; Wichita and Hays in Kansas; and last but not least Vicksburg, Mississippi! A great time was had by all operating through the balloon repeater.

In addition, the 35mm still camera took some great pictures every 3.3 minutes which lasted nearly the entire ascent leg. These photos will be scanned and will be available for downloading within the next few weeks at the following Web site:

http://procorp.com/procorp/NTXBP.htm

Those wanting QSL/SWL cards for NTBP #7B, please send requests to kg5ie@flash.net.

Doug Howard, KG5OA, would like to sincerely thank the Lockheed-Martin ARC in Fort Worth for supporting the NTBP. It took two very, very troublesome years to accomplish our seventh flight. Doug is extremely proud of the extraordinary patience and efforts that the members of the LMARC displayed throughout this difficult time. Hopefully, they will be ready to fly again

soon!

1437. [ANN] Major new release of MacGPS Pro

Newsgroup: rec.radio.amateur.space
Date: 1997-05-01 00:00:00 UTC
From: lwjames@csn.net
Message-ID: <lwjames-ya023180000105971338490001@news-2.csn.net>
Source record: 18997

James Associates is proud to announce a major upgrade of their popular
MacGPS Pro software.

This new version supports direct import of maps in GIF, JPEG, PICT,
Photoshop, MacPaint, Silicon Graphics, and QuickTime Image file formats.

It now supports the Garmin receivers with built-in Depth Sounders,
including display of depth on the track log on the map.

MacGPS Pro is used by thousands of people around the world to connect their
Macintosh to their Garmin GPS receiver. It has been refined over the years
by many new releases with additional features requested by happy users. It
is the only Mac GPS program which can display track logs, routes and
waypoints transferred to and from your GPS receiver, as well as your
current location, on a map. The background map can be almost any scanned
map, any map downloaded from the Internet, or any map copied from a CDROM
or another Mac program.

MacGPS Pro will work on almost any Mac, even an old one. It does not
require a portable Mac with a CDROM in order to show your current position
on the map of your choice.

Larry James
James Associates

1438. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1997-05-01 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5kause$c3r@blackbird.afit.af.mil>
Source record: 18998

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

Good, I'm glad there's at least one ham on your team.

I hadn't even considered ITU regulations. *sigh* Maybe I should recommend you add a lawyer to your team.

>But can anyone hear 100mw if our frequency is "somewhere" in the range
>of 0.140-2.500 GHz?

With a gain antenna and tracking software to drive it, I sure you could hear it. But you cut down on the potential amateurs that could help you recover data. Ideally, you use enough power so that someone with an omni can hear you. <shrug> It's a trade-off. But I wouldn't recommend any band over 435 MHz, keep it simple.

> <snip>

Ha, I thought of QSL cards shortly after I posted my message. Yes, QSL cards would be perfect.

Do you have a name for your project yet? I propose LodeStar (Low Orbit Drag Experiment - Satellite Tracking by Amateur Radio :).

1440. Two Mir WWW status pages

Newsgroup: rec.radio.amateur.space
Date: 1997-05-02 00:00:00 UTC
From: <>
Message-ID: <970401220949.tvr@mocha.ecofe.com>
Source record: 19000

It sounds like we might have to wait until the cooling problems in MIR can be resolved, so that MIR can be restored to its normal orientation with respect to the sun. At last report, it is oriented to reduce the cooling load on the core module, which also has the effect of reducing the output of its solar panels. That sounds like a good reason for not operating amateur equipment until that problem can be resolved. There are two pages which give MIR status reports:

http://shuttle-mir.nasa.gov/mir23/status/ (NASA version)

http://infothuis.nl/muurkrant/main_uk.html (MIRnews [Netherlands])

Note that the Mir mission number[?] will be incremented when there is a crew change, so when Linda Godwin replaces Jerry Linenger, that link should change to '.../mir24/status/'.

I've watched the Shuttle go over head many times but I've never seen it during its launch and ascent phase. I see that the next launch is set for 15 May and that this is MIR rendevous mission. Luanc is set for around 4 am.

I wonder if there's any possibility of observing the ascent from the Washington D.C. area? Comments, suggestions?

Thanks, 73 Bill N2CQR

Dove at 145.825 can be received with a scanner, and preferable a gp or
something like that, but at quiet locations with a good pass a rubber duck
can also work. I use a 2 meter HT and a 5/8 magnetic base antenna on the
(metal) edge of the roof, and can copy dove quite well at high elevations
(>30 degrees, ie above surrounding roofs). It transmits AX 25 standard bell
202 packet, 1200 baud. I am using a baycom modem on a 386, but anything
which can do normal packet at 1200 baud will work, just grab all the
frames. The telemetry can be decoded with half a dozen packages available
on the ftp sites with a ham directory.

Bill,
I used to live in the Space Coast area of Florida (My parents still do) and I've sat on the bank of the Indian River in Titusville, Florida for many launches. The only time you might be able to see any evidence of a shuttle launch from Washington D.C. is if it's done a night or they show it on CNN...
If you want to see the launch, find a blanket and have a seat along the Indian River. Oh, and bring a book and sack lunch, sometimes the waits can last a while.

Bill,

I used to live in Westminster, MD about 40 miles north of D.C.
and have watched two night time launches from there. It has
to be dark and it has to be a high inclination orbit (>50 degrees).
Best bet is to listen to the NASA clubs rebroadcast of the audio
on 2M and then you will know what/when stuff is happening. The
exhaust is clearly visible to the naked eye (but use binocs!) but
when they cut off the main engines it will disappear.
Good luck.

1446. STS-83R and Orbit questions

Newsgroup: rec.radio.amateur.space
Date: 1997-05-02 00:00:00 UTC
From: KD1YV <jimkd1yv@ix.netcom.com>
Message-ID: <336AA4C0.4876@ix.netcom.com>
Source record: 19006

I assume that if the reflight of STS-83 is going to be essentially the same as the original, it also will have a 28 degree inclination, so us poor saps in the higher latitudes don't have a chance to work SAREX. Does anybody know for sure if this is correct.

Which brings me to my next question. What criteria determines which inclination is picked for a particular mission? And while I'm at it, here's another. Is a typical orbit anywhere close to the plane that intersects the center of the earth, or is that plane somewhere between the center and the edge? If so, which of the Keplerian elements describes the angle or distance between the center and/or edge?

Thanks in advance for any help on these.

1447. $$ BECOME RICH SOON $$ PLEASE READ THIS

Newsgroup: rec.radio.amateur.space
Date: 1997-05-03 00:00:00 UTC
From: "Walter J. Thomas" <aag01@hotmail.com>
Message-ID: <5ke120$gi0@news.skyweb.net>
Source record: 19007

Subject: $$$$: BECOME RICH SOON !!

Dear reader,

PLEASE TAKE A MINUTE TO READ THIS, I'M RICH NOW AND YOU CAN BECOME TOO!

YOU CAN START YOUR OWN INTERNET BUSINESS IN YOUR SPARE TIME!!!

As you know the internet is growing at a tremendous rate. And
I'm sure you realize that millions of dollars are exchanged
for goods and services on the internet each day. Have you ever
said to yourself "I would like to use my computer too make
money" (or to make more money)??
WELL YOU CAN AND WILL MAKE THOUSANDS OF DOLLARS QUICKLY AND
EASILY IF YOU FOLLOW THESE SIMPLE INSTRUCTIONS!!!
The Business program outlined below is a simplified form of
E-mail marketing. Do not take this opportunity lightly, it is a
powerful tool that will allow you to have your own business
and start you on the path to financial freedom.

I KNOW THIS BUSINESS WORKS!! IT HAS WORKED FOR ME AND IT WILL
WORK FOR YOU. By the time you receive this business plan there
is a good chance that I will have been removed from the system.
But thats ok because I have already made a tremendous amount of
money using this system, and I would like to see your life change
as much as mine has. There is nothing more rewarding than
knowing that I have helped many good and honest people enrich
their lives. Follow the instructions listed below EXACTLY and
you will be on your way. Good Luck, and share the wealth.

Sincerely,
Walter J. Thomas

STEP1).
Get 5 pieces of 8.5"x11" paper and write:
"Please add me to your information mailing list"
Now take 5 $1 bills and fold $1 inside each piece of paper.
Place the request and money in 5 seperate envelopes and seal.
Carefully address the envelopes with the 5 addresses provided
below.(Be sure to include a return address and a stamp!)
Now mail the requests In a timely manner.

#1) Shari Davis; 1635 Manning Way; Colorado Springs, CO. 80919

#2) Gene Propp; 5121 W. 72nd Street; Praire village, KS. 66208

#3) Steve Wrubel; 3234 Nebraska Place; Costa Mesa, CA. 92626

#4) Rene van Ratingen; Akker 2 ; 6093 EJ ; Heythuysen ; Netherlands

#5) Walter J. Thomas; 244 5th Ave, 2nd Floor, New York NY, 10001

STEP2).
Copy this entire business plan and make the following changes:
Remove the #1 name off the list.
Place your name in the #5 position and move the other 4 names up. (#5moves to#4, #4moves to#3, #3moves to#2, #2moves to#1)
Your name is now the bottom of the list.

STEP3).
POST THIS ARTICLE ON AT LEAST 200 NEWSGROUPS!!!!!!!
E-MAIL THIS ARTICLE TO EVERYONE YOU CAN!!!!!!!
IMPORTANT NOTE: You MUST post this article to AT LEAST 200 newsgroups. There are about 45,000 newsgroups, with more being added every day. Each time you post on a newsgroup your message will be seen by many different people.
You should send this article via E-mail to as many people as possible. E-mail addresses are available for free through many sources on the internet. You can also purchase E-mail lists from several companies for a very small fee.
Remember it's your business and the more places you send it to, the better your chances of success! (I highly recommend that you send it out to more than 200 places).
REMEMBER TO PUT A CATCHY PHRASE IN THE SUBJECT BOX.

CONGRATULATIONS YOU HAVE JUST JOINED A GROUP OF ENTREPRENEURS!

Let me review why this works.....
Send out 200 articles and with a 5% response you get $10.
Those 10 people send out 200 and at 5% you get $100.
Those 100 people send out 200 and at 5% you get $1000.
Those 1000 people send out 200 and at 5% you get $10,000.
Those 10,000 people send out 200 and at 5% you get $100,000.
EVERYDAY THOUSANDS OF PEOPLE JOIN THE INTERNET!!!!!!!!!!

The above example is a perfect case scenerio. The response rate varies typically from 2% to 10%. To increase your success rate I suggest that you post this article to AT LEAST 200 newsgroups and send it to as many individuals as possible. Remember many people will see this article when it is posted on a newsgroup!! Also note that many of the people you send it to are likely to send it out to more than 200 newsgroups and people.

You don't have to retype this article every time you send it, just follow the instructions below and you will see just how easy this business is. If you follow these simple instructions there is no way you can lose. Every day several thousands of people get on the internet. Don't delay start today, you'll be glad you did!!!!!!!!!!!!!!!!!

POSTING TO NEWSGROUPS USING NETSCAPE:
1) Click on any newsgroup, like normal.

Then click on to " To News" in the top left corner of the
Newsgroups page. This will bring up a message box.
2) Fill in the subject box with a catchy phrase such as:
$$$FAST CASH$$$, ARE YOU THE PERSON WHO..., or the like.
3) Now go to the message part of the box and retype this letter
exactly as it is here. (The only thing you change is adding
your name in the #5 position and moving the other addresses
up 1 position each, thus removing the #1 name).
4) When you are done typing in the WHOLE letter, click on "File"
above the send button, then "Save as..." DO NOT SEND YOUR
LETTER UNTIL YOU SAVE IT!!(this is so you only have to type
this once).
5) Now that you have saved the letter, go ahead and send your
First copy!(click the send button in the top left corner).
6) THIS IS WHERE YOU POST AT LEAST 200 TIMES!!! OK, go to any
newsgroup article and click the "To News" button. Type in
Your catchy phrase in the SUBJECT BOX, then go to the body
part of the message box and place your cursor there.
NOW click on "Attachment" which is right below the SUBJECT BOX.
Click on "attach file", then find the letter you saved, click
once on your saved file, then click "Open", Then click "OK".
If you did this right, you should see your filename in the
attachment box and it will be shaded.
NOW POST AWAY!!!!!!!!!!!!!!!!!!!!!!!!!!!!

IF YOU ARE USING INTERNET EXPLORER:
1) Its just as easy, Holding down the left mouse button,
highlight this entire article, then press the the "CTRL" key
and the "C" key at the same time to copy this letter.
2) Now go to the newsgroups and press "POST AN ARTICLE", Type in
your catchy phrase in the subject box, and click the large
window below. Press "CTRL" and "V" and the article will
appear in the message window. **BE SURE TO MAKE YOUR ADDRESS
CHANGES TO THE 5 NAMES**
3) Now re-highlight the letter and RE-COPY it so you have the
changes...Then all you have to do for each newsgroup is
press "CTRL" and "V" and press "POST" it's that easy!!!!!

Thats it ! All you have to do is jump to different newsgroups
and post away. For both methods it only takes about 30 seconds
to post to each newsgroup. Once you get the hang of it.

REMEMBER THE MORE NEWSGROUPS YOU POST TO THE MORE MONEY YOU MAKE!!
YOU MUST POST TO A MINIMUM OF 200 NEWSGROUPS!!!!!!!!!!!!!!

You should start receiving replies within a week or so (sometimes
they come within days)

BE SURE TO SEND OUT $1 TO THE PEOPLE ON THE LIST PROMPTLY!!!!!!!!!

PERSISTENCE AND HONESTY WILL REAP YOU HUGE REWARDS!!!!!!!!!!!!!

DO NOT TO LET THIS OPPORTUNITY PASS YOU BY!!!!!!!!!!!!!!!!

FOR JUST $5 YOU CAN CHANGE YOUR LIFE!!!!!!!!!!!!!!!

REMEMBER: THE PERSON WHO DARES NOTHING, NEED NOT HOPE FOR ANYTHING.

You *cannot* choose both same up/dwown frequencies to drive FT-736 via
CAT port (and virtually any satellite transceiver).

Try to put 145.825 MHz as a downlink and select a dumb uplink
freqeuncy, eg, 430.000 MHz. I'm not familiar with WiSP, but I have a lot
of experience with TrakBox and my FT-736R, so I suppose such program now
will be doing the right work for you.

Best,

1453. $$$Get Rich Fast$$$

Newsgroup: rec.radio.amateur.space
Date: 1997-05-03 00:00:00 UTC
From: Ming Leung <jjl@intergate.bc.ca>
Message-ID: <336BE457.1F38@intergate.bc.ca>
Source record: 19013

should've done this sooner! It really does work!!!

A little while back, I was browsing these newsgroups, just
like you are now, and came across an article similar to
This that said you could make thousands of dollars within
weeks with only an initial investment of $5.00! So I
thought,"Yeah, right, this must be a scam",but like most of
us, but I was curious, so I kept reading. Anyway, it said
that you send $1.00 to each of the 5 names and address
stated in the article. You then place your own name and
address in the bottom of the list at #5, and post the
article in at least 200 newsgroups.(There are thousands) No
catch, that was it.

So after thinking it over, and talking to a few people
first, I thought about trying it. I figured what have I got
to lose except 5 stamps and $5.00, right?

Like most of us I was a little skeptical and a little
worried about the legal aspects of it all. So I checked it
out with the U.S. Post Office (1-800-725-2161)and they
confirmed that it is indeed legal!

I told my friend about it. Since she's a lot more adventurous than I,
she
tried it first.

Well GUESS WHAT!!... with in 7 days, she started getting
money in the mail! I was shocked! I still figured it would
end soon, and didn't give it another thought. But the money
just kept coming in. In her first week, she made about $20.00
to $30.00 dollars. By the end of the second week she had made
a total of over $1,000.00!!!!!! In the third weekshe had
over $10,000.00 and its still growing. This is now her
fourth week and she says she has made a total of just over
$42,000.00
and its still coming in ....

So with that I've given it a try. This is now my first week & Im
very
encouraged! I should've done this a lot sooner!!!!

Its certainly worth $5.00, and 5 stamps, I spent more than
that on the lottery!!

Let me tell you how this works and most importantly, Why
it works....also, make sure you print a copy of this

article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL!

Mail the 5 envelopes to the following addresses:

#1 Robert Russell
1721 Corning Lane
Midland, Mi 48642

#2M. Lichen
P.O. Box 451105
Ft. Lauderdale Fl. 33345-1105

#3 Amanda Sollecito
108 Haystack Rd.
Manchester, CT. 06040

#4 Ben Ku
1943 Grist Stone Ct.
Atlanta, GA 30307-1185

#5 Jason Leung
1102 Canyon Blvd.
North Vancouver
V7R 2K4 CANADA

STEP 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on
"To News, which is in the top left corner of the newsgroup
page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the
one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype
this letter exactly as it is here, with exception of your
few changes. (remember to add your name to number 5 and
move the rest up)

4) When your done typing in the WHOLE letter, click on
FILE above the send button. Then, SAVE AS.. DO NOT SEND
YOUR ARTICLE UNTIL YOU SAVE IT. (so you don't have to type
this 200 times :-)

5) Now that you have saved the letter, go ahead and
send your first copy! (click the SEND button in the top
left corner)

6) This is where you post all 200! OK, go to ANY
newsgroup article and click the TO NEWSbutton again. Type
in your flashy subject in the SUBJECT BOX, then go to the
message and place your cursor here. Now click on
ATTACHMENT" which is right below the SUBJECT BOX. Click
on attach file then find your letter wherever you saved it.
Click once on your file then click OPEN then click OK.
If you did this right , you should see your filename in the
ATTACHMENT BOX and it will be shaded.

NOW POST AWAY!!

IF YOUR USING INTERNET EXPLORER:
Its just as easy, holding down the left mouse button,
highlight this entire article, then press the CTRL key
and C key at the same time to copy this article. Then
print the article for your records to have the names of
those you will be sending $1.00 to.

NEXT
Go to the newsgroups and press POST AN ARTICLE type
in your flashy subject and click the large window below.
Press CTRL and V and the article will appear in the
message window. **BE SURE TO MAKE YOUR ADDRESS CHANGES TO
THE 5 NAMES.** Now re-highlight the article and re-copy itre-copy
it
so you have the changes.... then all you have to do for
each newsgroup is CTRL and V and press POST . Its
that easy!!

THATS IT! All you have to do is jump to different
newsgroupes and post away, after you get the hang of it ,
it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200

Thats it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you receive. If you wish to stay anonymous, you con invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part:

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM postswith my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday

and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!!

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. **By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again...

Does the MFJ 1270 data controller do 1200 baud BPSK? If so, how does one set it up? I am new to satellites and packet. Appreciate any comments.

Of course it is best to go to Florida and watch it from closeby...
Last year I watched a launch from the "static test road" viewing site
on the kennedy space center. It was great, but you need a special pass
for that. I don't know the official way to get those passes, but you
can buy passes for another (larger and slightly more distant) viewing
site on KSC from the visitor center. On the viewing sites there are
loudspeakers with the usual status messages so you know when it is
really going to happen and if there are delays.

However, I would not recommend travelling there for the 15May launch,
last time I looked on the Internet site it said that the date was likely
to shift back (probably because of the fuelcell problem?)

(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
use the satellite if the beacon frequency wavers, or if downlink signals
```

chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse.

The chances of damaging AO-10 by uplinking during "FMing" are probably remote. The caution mainly stems from a theoretical consideration. AO-10's latching relays are set to the omni antenna and the transponder is on in Mode-B configuration. This all turns out to be perfect since we can't control the attitude, etc. Each time there's a power spike the chance exists that the IHU could have a "seizure" and blurt out a pulse to switch the antennas to higain, switch the transponder off or whatever. Of course these spikes occur every time we come out of eclipse, but the idea is to do what we can to minimize the number of power spikes. Occasionally spikes have "activated" the IHU in the past and caused the beacon to send out nonsensical data rather than the current constant carrier for short periods of time. ..and it isn't clear when AO-10 switched to the omni antenna, so I guess such things may have happened in the past.

I suppose there are also some considerations regarding the effects on the transponder of operating it so far off its normal voltage/current curve, but, again, this doesn't seem to have caused a problem after many years. <thanks to Stacey E. (Chuck) Mills W4SM for this explanation>

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite.

* Radio Sport-16 currently has its Mode A transponder turned off. The 435.504 beacon is the only one currently being copied. Reports out of Russia speculate that the transponder may be turned on for amateur use sometime in late May or June.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

May 2(Fri) 10:26z JD 1200bps
9(Fri) 00:57z JD 9600bps
16(Fri) 01:35z JA
23(Fri) 00:29z JD 1200bps
30(Fri) 01:07z JD 9600bps

* Mir Simplex is still offline as of time of writing due to ongoing
problems on board the space station, any QSO reports would be appreciated.

* Space Shuttle Frequencies when in orbit.
Next SAREX mission tentatively set for July 1997.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 2M

Mode T: Uplink 15M
Linear Downlink 2M

The MFJ 1270 doesn't include a PSK modem, but like all TAPR clones it does have a modem disconnect header which will allow you to install one. TAPR sells a kit, and PacComm and others offer wired and tested PSK modems which can be fitted to the 1270. If you want a TNC with the PSK modem already fitted, PacComm will sell you one. Or you can get a DSP unit which has software to do PSK.

Hi Richard!

It's been awhile but I've worked you on AO-10 a couple of times when I was in North Dakota. I suspect that you are experiencing the same problem that many other amateurs have run across. AO-10 isn't getting good sunlight on it's solar panels this time of the year due to it's orientation to the sun.

Be patient and we'll see you on the bird later this Fall. (I'm in Minnesota now, so another contact means a new state and grid!)

1465. ATLANTA RADIO CLUB'S HAMFESTIVAL JUNE 21-22 1997

Newsgroup: rec.radio.amateur.space
Date: 1997-05-05 00:00:00 UTC
From: rychard@atl.mindspring.com
Message-ID: <5kjdu9$v0v@camel1.mindspring.com>
Source record: 18925

THE 69TH ANNUAL ATLANTA RADIO CLUB'S HAMFESTIVAL

The Atlanta Radio Club's Hamfestival on June 21-22,1997 is
the Southeast's premier hamfest.This hamfest is brought to you
by the Atlanta radio club,with the help of many of the local
radio clubs here in the metro atlanta area.This is our club's
69th annual hamfest,and with your attendance we hope it will be
our biggest and best to date.
This years event on June 21-22,1997 will be held at the
Atlanta City Hall East-Exhibition Center,675 Ponce de Leon Ave.This is
the same great site as last year's hamfest,which is near the downtown
area,and very easy to get to,and plenty of free parking.
On the days of the hamfest,we will be usings our clubs repeater
(W4DOC 146.82 Mhz minus 600Khz offset) on top of the Nations Bank for
talk-in.This repeater is used every Sunday night 8:00 pm for the
Atlanta Radio Club's net.If you are in the area your presence on the
net is welcomed.
For much more information about our Club and Hamfest plese check
out our web page at http://www.saf.com/arc.The club's BBS at
770-850-0546 has a lot of info also, or send email to dickb@akorn.net
our regular address is ATLANTA HAMFESTIVAL
P.O. BOX 942150,Atlanta Ga. 31141-2150
No matter what your interest in the radio hobbies are,you will find
you came to the right place.Amateur Radio,Shortwave radio,Scanners,
Satellite radio,Emergency radio,Marine radio,Military surplus
radios,etc.AM,FM,SSB,CW,PACKET,RTTY,SLOWSCAN,FAX,DX,ATV,AMTOR,EME,whatever
your interest this is the place to be.If your into building or
homebrewig equipment,radio or computer this is the place to find those
hard to find parts and gizmos.
The computer hobbies are doing better than ever and these interest
will be well covered at the Hamfest.
Buying,Selling,Trading,Swapping,Dealing,Bartering,Giving will all
be happening at the hamfest,probably some begging also.Whether your
coming with money to buy,a load of goods to sell,or just looking
around this is going to be a great hamfest.

The Atlanta Radio club has our regular meetings the first Thursday
of each month.These meetings are at 7:30 PM,located at the Georgia
Power Fedral Credit Union, 4900 Ashford-Dunwoody Rd.this is near the
I-285 loop on the north side of the city.
The Atlanta Radio Club is a non-profit organization wishing to
promote Amateur radio to all interested.
Our club president is Bill Bass W4LFC ph# 770-493-8438,his email
address is BillW4LFC@juno.com ,our vice-president is John Talipsky,Jr
KA4VQH ph#770-925-7110 his email address is johnka4vqh@juno.com ,our

club Secretary is Penn McClatchey K4PE ph#404-605-0742 his email is pmm@saf.com our Treasurer is Charles Golsen N4TZM ph#404-252-3303 his email address is cgolsen@atlanta.com ,our clubs activities manager is myself Richard Dean Young KR4IU ph#404-622-8433 my email address is rychard@atl.mindspring.com ,the opinions expressed are my own and are probably bias due to my love of the radio hobbies.
Hope to see you at the hamfest soon.

The earth is not flat, it is (in first approximation) a sphere.
What do you mean with "the edge"?

>
>>I wonder if there's any possibility of observing the ascent from the
>>Washington D.C. area? Comments, suggestions?

That would not be a problem in Wash, DC. If the weather is clear you
will be able to see the launch after it heads northward. I have seen
several launches from the northern coast of SC on the beach. I can
easily see it a few seconds after lift off and watch it pass offshore
heading north. A recent launch that had live coverage on the NASA web
page had sightings further north than DC.
Give it a try, its very impressive.

Yup! The satellite is called DragSat. But given its small size, and
the StarWars names like "Smart Rocks" and "Brillian Pebbles", I was
thinking something like "Sentient Softball" might be better...

Yes. We expect to vary only a few degrees from "room temperature" due to careful selection of external material and coatings. We expect to use the Duracell data as-is, though there are some newer alkalines from other manufacturers (most notably Panasonic) that beat Duracell capacity by 25%.

We had also looked at lithium cells, but despite their higher capacity, they were rejected for two reasons:

1) They have a proven tendency to explode under certain conditions.
2) They have very high internal resistance that makes them unusable for high-current pulse-mode transmitter operation.

If it helps with antenna design, it can be anything needed to solve the problem. Any recommendataions?

The orbit plane, to a very good approximation, always passes through the center of the earth (center of mass, actually). The angle between the orbit plane and the earth's equatorial plane is the INCLINATION. The satellite therefore passes equal distances north and south of the equator (this angular distance is the same as the inclination, for a circular orbit like the shuttle).

The choice of inclination for shuttle flights probably depends on how much of the earth's surface is to be covered, whether and how often eclipses are tolerated, how much fuel is to be expended, and, ultimately, what kind of experiments are to be done.

Did you look at the recent Philips announcement? I think they beat
Duracell by 100% or so.

>John WA8CLT

Hi, John.
No, the 1270 (and MOST 1200 baud TNCs do NOT do BPSK (binary phase-shift keying). The standard 1200 baud TNCs like the MFJ 1270 have an AFSK (audio frequency-shift keying) modem built in. BPSK is used for some of the 1200 baud birds because it provides a 3-8 dB advantage over AFSK signals (that is, weaker signals can be decoded properly).

The 1270 MAY be used with an external modem, however, to do BPSK. there is a 20 pin header on the pc board (or a double row of holes in the pc board, depending on the version), where an external modem may be connected to "take the place of" the internal AFSK modem.
TAPR produced a kit some years ago, I am not sure if they still sell it. I picked one up at a flea market a couple of years ago, and have been working on wiring it up to a 1270, on and off again. Also, I believe PacComm makes the PSK-1 modem for the same purpose.

Another requirement of operating the 1200 baud PSK birds is the ability to put the TNC in the KISS mode. Older 1270s require a new EPROM, newer ones come with this capability. The KISS mode is required because you must run special software to access these birds (eg: WiSP, from AMSAT). This is the same software we use to access the 9600 baud satellites. I have been active on the 9600 baud birds for a couple of years now, using an MFJ 1278, and an add-on internal 9600 baud modem.

So, in summary, no, the 1270 won't do it "out of the box". Some extra work is required. Getting on the PSK satellites also requires an ALL-MODE radio (or radios) because the uplink is FM, and the downlink is USB. Getting on these satellites is harder than plug-and-play terrestrial packet, but the thrill of your first connect is great, and you can't help learning a lot on the way. Good Luck!

1473. NORAD Two-Line Orbital Element Sets (TLE990)

Newsgroup: rec.radio.amateur.space
Date: 1997-05-05 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5kllnl$eg6@blackbird.afit.af.mil>
Source record: 18933

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

E-Mail Your Way To Riches!

Dear Friend,

We all know E-mail is here to stay. It's fun, easy and exciting! Would you be interested if we could show you a way to make well over $1,000 per week doing it?

This is not a joke. You may have seen many people trying to tell you that you can make money by joining this or that scheme! Guess what, you decide to go for it and then you get nothing but frustration and disappointment! We are here to take your frustration and disappointment into an Electrifying Adventure!

We have been marketing on-line for almost 2 years now! We have never spent one red penny on advertising and made nothing but profits. We can show you how to make money every day of the year. Many people may think this is untrue or it just can't be done. We are here to tell you that it is absolutely not true. The biggest mistake people make about marketing on-line is that they sit and wait for people to contact them. You will never make it if this is your approach and we'll tell you why. There are over 60 MILLION people on-line right now, and seven new people logging on every minute of the day world-wide and everyone is offering something. So how do you get a potential client or a new customer before your competition does? The answer is simply " Creative E-mailing" and it WORKS! I'll tell you why. You're taking your product, service or idea directly to the market instead of waiting for the market to come to you!

Here are a few testimonials we'd like to share with you (They're all 100% TRUE!):

Internet Communications, my wife and I owe you so much. We ordered your Creative E-mail System and within the first week we received over $1,150 in orders for my Internet Consulting business!
--Charles -- California

I have bought two so-called E-mail programs that cost me over $600.00 when I received them. They were extremely difficult to operate and it took me about two weeks to figure them out. Once I did, they were so time consuming it just wasn't worth my time. When I received your course it took me about four minutes to install and I was in business! Within the first 24 hours of my first E-mailing I received over $580.00 in sales over the phone. That first week I grossed over $2,000.00! I really can't believe how easy you made this, anyone can do it! Thanks!
--Dennis -- Illinios

Hello, I'm a divorced mother of two children. I wanted to thank you for helping me out. This was my first time buying anything on the Internet. I was skeptical at first but I figured I'd take a chance. This was the best chance I've ever took! My part-time business is now a full-time home-business, thanks to your

Creative E-mail System. I had to hire my two family members to help me out!
This is GREAT, thanks so much! I'd recommend this for anyone!
--Ellen -- Florida

You may have seen other people offering products "E-mail Programs, E-mail Addresses, Extractors, Etc." The vast majority of these products are very over-priced and very difficult to even use. None of them even supply you with current, up-to-date, FRESH & RESPONSIVE E-mail addresses! Our Creative E-mail System puts everything into one package to make your profits soar immediately! Even if you do not have a product or service to offer, we are going to give you over 500 how-to reports that you will have full reprint rights to! What makes our course different from anything else being offered anywhere is that we're dedicated to your success! We do not succeed unless you succeed! All of our E-mail Address Databases are created in house. We do not trade our databases with anyone because people are selling extremely bad lists on the Internet. Many of other people's databases are filled with duplicate addresses and many of them are undeliverable. We keep our own database so we know exactly what we have and we keep nothing but the best. There's no other way. We believe in producing high quality products that should be priced reasonably for your success! Read on to see the special bonuses you will receive.

******** SPECIAL 10 DAY BONUS ********

If you order within the next 10 days we will include:

1) 500 How-To Reports (You may resell these at any price)

2) Your Personal Complete Guide To The Internet -- This 175 page e-book covers every single aspect of the internet. You will never have to buy another internet book! When you complete this book, you will know more about the internet than 90% of the people online right now.

3) When you purchase our 8 MILLION SUPER responsive E-mail list we will include Mega-Mailer. It sends 250,000 E-mails per hour! All other orders will receive Pegasus Mail. It mails about 30,000 per hour.

Here's how to get the Creative E-Mail System:

All orders are delivered on CD-ROM or 100mb Zip Disk (Iomega).

============> E-Mail Databases <================

2 Million FRESH E-mail Addresses only $ 99.95
4 Million FRESH E-mail Addresses only $179.95
6 Million FRESH E-mail Addresses only $249.95
8 Million FRESH E-mail Addresses only $299.95

You will be sending your Marketing Letter to 2, 4, 6 or 8 MILLION People! To mail to 2 MILLION People by U.S. Mail at $.32 per stamp would cost $640,000.00, not including envelopes or paper! The price of 2 MILLION E-mail Addresses isn't even a fraction of the cost. And the great thing is that if you have 10 products, you can E-mail to your list as many times as you want to! Your profits will never stop soaring! Don't pay someone else to send your

advertisement out, do it yourself and save big money! The average cost right now to send your ad one time to ONE MILLION people is $1,400.00. You can send it 100 times to EIGHT MILLION people for only $299.95 and that includes Mega-Mailer that sends 250,000 per hour!

==========> Order Form <==========

Yes, Internet Communications Inc., I wish to take you up on your SPECIAL 10 DAY OFFER FOR YOUR CREATIVE E-MAIL SYSTEM, INCLUDING THE TWO SPECIAL BONUSES: "Complete Internet Guide Book" and "500 How-To-Reports". I understand I have to completely fill out the order form so you can fulfill my order.

Do you have a link to the specs? All I found on their site was the
press release.

Are they alkaline (NOT lithium)?
Do you have a link? I found nothing on their site.

You'd better research that again. *Any* artificial Earth satellite carrying an intentional RF emitter is subject to Federal licensing and international notification requirements. There is no power limit below which you are exempt. This is a matter of international treaty, there is no equivalent of Part 15 for space operation.

Licensing the sat in the amateur radio satellite service avoids a lot of
the trouble anyway.

Keplerian bulletins are transmitted twice weekly from W1AW.
The next scheduled transmission of these data will be Saturday, May
10, 1997, at 2230z on Baudot and AMTOR.

1483. Radio Meteor Obs. Bull. April 1997 Lyrids

Newsgroup: rec.radio.amateur.space
Date: 1997-05-06 00:00:00 UTC
From: steyaert@vvs.innet.be
Message-ID: <steyaert.115.336F83F4@vvs.innet.be>
Source record: 18943

Radio Meteor Observation Bulletin No. 45 May 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 deg (= E),
elev 27 deg
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

March 1997

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Apr 1997	20h	21	22	23	00	01	02	03	04	05	06	07	08

```

Notes:
. Lyrids on April 21-23. Radiant rises at 18h UT and sets at 13h30 UT.
Best forward scatter conditions for this setup between 20h - 0h UT,
and 4h - 11h UT.
. local time = UT + 2 hours.

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 30 deg
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic E.

Notes:
. Lyrid activity on April 21-23.
. increased activity at the end of the month between 4h and 9h UT
(eta Aquarids?).
. local time = UT + 2 hours.

Pierre De Groote

Observer : Kimio Maegawa
Transmitter : JA9BOH/b beacon for RMO (50 W CW 53.7500 MHz)
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith .
Location: Sabae city (136.2 E, 35.9 N)
Receiver : IC726 + LNA (NF = 3 dB) 2400 Hz BW SSB, sensitivity -150 dBm
Antenna: 3el Yagi 7 dBi (El 70deg ,Az SE direction) height 10 m
Location: Ohno city (136.5 E, 36.0 N)
Data processing: Receiver output is fed into DX2-66 MHz PC and analyzed by
AF9Y's FFTDSP42 software.
Then stored every 10.5 min automatically with GIF format.
Play back GIF files and count meteor echoes manually by
rejecting tropo signal or airplane echoes.

1997 Lyrids hourly echo counts

A: all echoes L1: long echoes (T > 5 s)

2. ANNOUNCEMENT

From: John Peters <pe1ogf@iaehv.nl>
>>>> info meteor-scatter [Last updated on: Tue Apr 15 14:19:11 1997]

Meteor-scatter Mailing List

This list has the following purposes:

1) To provide a forum to encourage discussion on 50 MHz and up meteor scatter propagation and operation.

2) Announcing Meteor-scatter DX-Peditions, arranging skeds and sending your activity reports.

Membership of this list is open to all interested parties; to join, send a message to:

majordomo@qsl.net

with the following in the BODY of the message:

subscribe meteor-scatter

Once you have subscribed, you may post to the list by addressing mail to the list address:

meteor-scatter@qsl.net

A copy of your email will be sent to all the subscribers.

3. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

* STS-84 LAUNCH DATE SET *
==========
NASA managers set May 15 as the official launch date for Space Shuttle
Atlantis' sixth docking with Russia's Space Station Mir following completion
of the Flight Readiness Review at the Kennedy Space Center (KSC), FL.

The STS-84 launch window opens at about 4:08 a.m. EDT (0808 UTC) and extends
for approximately seven minutes. The actual opening of the window may vary
by a couple of minutes based on the Shuttle's rendezvous requirements and
Mir's precise location in space at the time of launch. An on-time launch
May 15 will result in Atlantis landing at about 7:49 a.m. EDT (1149 UTC),
Saturday, May 24, at KSC, completing nine days in space.

"We have just completed a comprehensive review of the STS-84 mission,"
said Johnson Space Center Director George Abbey, who chaired the meeting.
"Together with our Russian partners, we reviewed the status of Atlantis
and the Mir station and have agreed that everything is ready to proceed
with the next docking mission. We look forward to welcoming Jerry Linenger
home after his stay on Mir and also look forward to watching Mike Foale
continue our cooperative efforts and joint science experiments on the
station."

STS-84 is the sixth in a series of docking missions between the Shuttle
and Mir and the third involving the exchange of American astronauts.
Linenger, who has been a Mir crew member since January 15, will be
replaced by Foale, who then will spend more than four months on the
station before returning to Earth on the STS-86 Atlantis/Mir docking
mission in September.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

I spoke with Kenwood's Technical Representative today and he related that within a week or so - perhaps in time for the Dayton Hamfest, Kenwood will have a Windows 95 program that will allow file uploads and downloads from the TM-V7A. It will enable alpha numerics for and load the memories with frequency and PL tones. No other remote programmability is planned. The program is supposed to sell for $39.95 and use the data port & PG5A connector.

This will certainly take the pain out of loading memories - especially after a CPU reset!

I had email to/from the company that is actually doing the work on this project. I put a bug in their ear that since they had the interface to communicate with the V7, gee, wouldn't it be a great way to make a cheap remote base? A single card computer talking to the V7 and all you would have to do is plug in a control receiver... simple and cute.

Major hint. The control head is just that, a control head. Four wires (ground, power, data in and data out) are all that will be used. Someone want to figure out how to interface it? Or make new software other than the cloning software?

Rick

In <336FA42F.31EB@codem.com> "Larry L. Ledlow, Jr." <ledlow@codem.com> writes:

>Licensing the sat in the amateur radio satellite service avoids a lot of
>the trouble anyway.

I'm not so sure about that.
Maybe it avoids trouble with the authorities, but you can get a big
flamewar with the amateur world by trying to license a satellite as
an amateur radio satellite when there is no amateur radio aspect in
the whole project. And rightly so.

But, I think it can be done with this project.
The topic itself probably is interesting to many radio amateurs active
in the satellite field. SO, you only need to make sure that they can
make an active participation in the project, and they will be thrilled.

This means: publication of the mission objectives, frequencies, transmission
schedule, data formats, and some suggestions for further processing of
data.
Also, publication of derived information from the data by the coordinating
station itself.

When you do that, it should be OK.

Rob

This has been discussed for the TM733 as well, but nobody has done
it... It seems like all restrictions as to out-of-band operation,
xband repeater, 1750Hz tone etc. Is only present in the "control head"

Frank:
I recall the Cosmonauts going out to revive Salyut 7. THey were
hoping to maintain dual presences but had a Hellish time getting Salyut
to maintain it's environment. Eventually, it was de-orbited into the
Indian Ocean. Salyut had suffered a serious electrical fire and was as
cold as anything can get in space when the Cosmonauts boarded her. They
had to retreat into the Soyuz to warm their hands while rewiring the
station. I believe at least man maintained a presence aboard
MIR during that time. I may be wrong, but that is my recollection.

1491. G3RUH modem on ADSP2181 ?

Newsgroup: rec.radio.amateur.space
Date: 1997-05-08 00:00:00 UTC
From: Chris Elmquist <chrise@cyberoptics.com>
Message-ID: <3371E82E.1476@cyberoptics.com>
Source record: 18951

I'm wondering if anyone has implemented a G3RUH 9600bps FSK modem
on an Analog Devices ADSP2181 ?? Specifically, I'd like to use
one of these eval boards that Analog Devices has been offering
with their seminar. I'm not looking for the whole modem+TNC implemented
on the DSP... just the modem. I'd hook the eval card to a real
TNC to do the protocol work.

Any pointers appreciated.

Chris

To all radio amateurs

SB SPACE ARL ARLS014
ARLS014 STS-84 launch May 15

NASA has set May 15 as the official launch date for space shuttle Atlantis sixth docking with the Russian Mir space station and a trip back home for ham-astronaut Jerry Linenger, KC5HBR. The STS-84 launch window opens at about 4:08 AM EDT on May 15. STS-84 is the sixth in a series of docking missions between the shuttle and Mir and the third involving the exchange of American astronauts. Linenger, a Mir crew member since January 15, will swap places with Michael Foale, KB5UAC, who will spend more than four months on the station before returning to Earth on the STS-86 Atlantis/Mir docking mission in September. Astronaut Wendy Lawrence, KC5KII, will replace Foale in September.

Several other hams will be on the STS-84 crew. They include Commander Charles Precourt, KB5YSQ, and Mission Specialists Edward Lu, KC5WKJ, Carlos Noriega, KC5WKK, and Jean-Francois Clervoy, KC5WKG.

Late last month, Linenger--more than 100 days into his four-month research mission aboard Mir--conducted his first spacewalk. He was joined by Mir Commander Vasily Tsibliev. It was the first time a US astronaut conducted a spacewalk while wearing a Russian space suit.

Dave Larsen, N6CO, reports that Foale has received FCC approval to speak with unlicensed third parties via ham radio during his stay on Mir. Foale also has permission to use the German Space Amateur Funk EXperiment (SAFEX) equipment on Mir in addition to the 2-meter gear. The other STS-84 ham-astronauts also may use the Mir equipment during the docking mission.

Matt Bordelon, KC5BTL, at Johnson Space Center, said Foale has promised to keep the packet system on as much as possible. ''He enjoys talking with people and looks forward to experimenting with

ham equipment onboard Mir,'' Bordelon said. Jay Apt, N5QWL, shares an office with Foale, and Bordelon says Apt shared his experiences of visiting the Mir station with Foale. ''Mike will be busy the first few weeks onboard Mir, but after that he will be on-the-air,'' Bordelon said.

For more information on STS-84 (and pictures of Foale and Linenger), check out NASA's shuttle Web site at http://shuttle.nasa.gov/index.html/.

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle
used to catch bits when they fall off the end of a register
during a shift instruction). Discarded, lost, or destroyed data
is said to have `gone to the bit bucket'. On Unix, often used
for /dev/null. Sometimes amplified as `the Great Bit Bucket in
the Sky'.

2. The place where all lost mail and news messages eventually go.
The selection is performed according to Finagle's Law;
important mail is much more likely to end up in the bit bucket
than junk mail, which has an almost 100% probability of getting
delivered. Routing to the bit bucket is automatically performed
by mail-transfer agents, news systems, and the lower layers of
the network.

3. The ideal location for all unwanted mail responses: "Flames
about this article to the bit bucket." Such a request is
guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those figures last week; they must have landed in the bit bucket." Compare black hole.

This term is used purely in jest. It is based on the fanciful notion that bits are objects that are not destroyed but only misplaced. This appears to have been a mutation of an earlier term `bit box', about which the same legend was current; old-time hackers also report that trainees used to be told that when the CPU stored bits into memory it was actually pulling them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of the `parity preservation law', the number of 1 bits that go to the bit bucket must equal the number of 0 bits. Any imbalance results in bits filling up the bit bucket. A qualified computer technician can empty a full bit bucket as part of scheduled maintenance.

HALO Rockoon Flight

Location: Hampstead, NC (20 miles northeast of Wilmington, NC)
Date: May 10th
Time: 6:15 am EDT (Balloon liftoff)
Time: any time after 8:15 am EDT (Rocket Launch from 105,000 feet)

Transmitters:

On Rocket:

Callsign: KE4ROC
1280 MHz FM ATV (3 watts into vertical antenna)
441.050 MHz FM (packet radio with APRS formatted GPS data)

Coverage range: 700 miles from apogee (entire East Coast, Southeast and
part
of Midwest)

On Launch Gondola:

Callsign: WB8ELK
434.00 MHz AM ATV:(live color camera view of rocket liftoff)
Horizontally
polarized.

Coverage range: 400 miles at launch altitude.
(Southeastern states and on up to New Jersey and Pennsylvania.)

HF coordination nets:

3.871 and 7.155 MHz... W4HTB and WA3USG net controls.

Raindate: May 11th or 12th.

Rob,

The concept that I was trying to describe (but apparently did not do very well), was as follows. Let's assume that a given orbit lies within a single plane, and that plane intersects the sphere of the earth. If it did not intersect the center of the earth, then it would be possible to draw a line from the center of the earth to the edge (a point on the surface of the sphere, so that such line intersected the plane in a perpendicular fashion.

However, that whole discussion is now moot, since in a subsequent message, Carl pointed out that the plane of the orbit does intersect the center (of mass) of the earth's sphere. Thanks anyway, for your interest.

>--
>Chris Elmquist, N0JCF chrise@cyberoptics.com
>CyberOptics Corporation
>Minneapolis, MN

I've just developped a 1200bps AFSK modem (Bell-202) on the ADSP2181 EVB.
The modem implements also the HDLC part of the data-link layer and interfaces
to the host (KISS protocol) via the RS-232 port of the evaluation board.

The software is still to be fine tuned, even if it is already working with JNOS,
and this will take me some more time.

I'm also evaluating the performance of a ADSP2181-EVB implementation of
the G3RUH modem and probably will start to write some code in the next weeks.

All the best.

KD1YV <jimkd1yv@ix.netcom.com> wrote:

>Which brings me to my next question. What criteria determines which
>inclination is picked for a particular mission?

You can launch the largest payload when you launch due east from the equator, since you can take advantage of the earth rotational speed (460 m/s) to get a "flying start" for the satellite. That is why ESA launches from the French Guyana, which is just south of the equator.

Launching into a polar orbit from anywhere on earth does not give this initial speed, so the rocket has to generate the extra 460 m/s, thus reducing maximum payload.

If you are not on the equator, some of speed gained from the earth rotational speed can still be used when launching due east. The latitude of the launch site also determines the _minimum_ inclination, thus the minimum inclination from Cape Canaveral is 28.5 degrees and 48 degrees from Baykonur (Soyuz and Mir).

Shuttle flights that do not need a special orbit (such as micro gravity, life science etc.) or have a heavy payload or need a high orbit (Hubble) are launched at 28 degree orbits to get maximum gain from the rotational speed of the earth.

However, if you are doing earth science, you want to cover as much area as possible, you launch at an high inclination. The limit is about 55 degrees, since if you use a higher inclination, used rocket stages would drop into New York and other cities on the coast and someone might protest :-). The Mir is at 51.5 degrees inclination, so if you are going to dock with it, you better launch at the same inclination.

Paul OH3LWR

1507. **OVER 2700 Ham Radio WWW Links**

Newsgroup: rec.radio.amateur.space
Date: 1997-05-10 00:00:00 UTC
From: "Brian K. Short" <ke7gh@primenet.com>
Message-ID: <337533C8.527D@primenet.com>

OVER 2700 Ham Radio WWW Links

Just added a collection of ~2740 amateur radio WWW links:
http://www.qsl.net/k7on/index24.htm

Or, "OTHER Internet Resources" from the main page:
http://www.qsl.net/k7on

Please copy them, use them, etc...

73, Brian

1508. HALO Rocket Balloon Launched

Newsgroup: rec.radio.amateur.space
Date: 1997-05-11 00:00:00 UTC
From: Gene Marcus <mmarcus@hiwaay.net>
Message-ID: <3375DF31.150E@hiwaay.net>
Source record: 18968
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.space

The following was copied from WB8ELK's webpage:

ROCKOON FLIGHT A SUCCESS! Although the balloon
failed (burst) at about 60,000 ft instead of the planned
upon 100,000 ft, WB8ELK caught the balloon burst on
video and the "FIRE" command was issued. The rocket
fired and traveled to an altitude of (and this is only a guess)
30 miles. The exhaust blast hit the camera on the balloon
gondola, but the video kept on working. The
gondola/APRS/GPS/ATV package splashed down into the
ocean and a recovery boat is attempting to find it. The rocket
sent back spectacular photos from the very edge of space.
Please watch ABC World News Tonight and CNN, there should
be stories on both programs.

Refer to http://fly.hiwaay.net/~bbrown/ for updates and photos
when they become available.

1509. Kenwood TS-850 SAT,Reading of ALC meter

Newsgroup: rec.radio.amateur.space
Date: 1997-05-11 00:00:00 UTC
From: nsallay@200.241.112.2
Message-ID: <337607EF.2E17@200.241.112.2>
Source record: 18969

Gentleman,I have a almost new Kenwood TS-850SAT TX,wich I mostly used
on Packet BBS work.
On start up of the transceiver,I adjust the mic-gain to 75% of the ALC
scale.After 40 minutes more or less of TX work,the indication of
modulation amount starts to drift over the end of the ALC red line.
As I have no scope to measure flattoping,I would apreciate to know from
other Kenwood TS-850 users on their experience.
The main points are:
-Does the amount of modulation really varies with the meter indication
-Or,is this variation observed,result of "heating" of the metering
circuitry and therefore a false indication.

In SSB transmission no variation naturally was observed and no complains
on modulation qualitie have been received.
I tried out older serial numbers the the same model and found the same
bar graf meter problem.
At Kenwood FTP no information has been found on this matter.
Any information/instruction will be greatly apreciated.

Best regards and 73
Nicolau Sallay - PP8DA

Uplink 435.750 FM subaudible tone 141.3
Downlink 437.950 FM

SAREX Simplex (Space Shuttle)*
Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
use the satellite if the beacon frequency wavers, or if downlink signals
```

chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse.

The chances of damaging AO-10 by uplinking during "FMing" are probably remote. The caution mainly stems from a theoretical consideration. AO-10's latching relays are set to the omni antenna and the transponder is on in Mode-B configuration. This all turns out to be perfect since we can't control the attitude, etc. Each time there's a power spike the chance exists that the IHU could have a "seizure" and blurt out a pulse to switch the antennas to higain, switch the transponder off or whatever. Of course these spikes occur every time we come out of eclipse, but the idea is to do what we can to minimize the number of power spikes. Occasionally spikes have "activated" the IHU in the past and caused the beacon to send out nonsensical data rather than the current constant carrier for short periods of time. ..and it isn't clear when AO-10 switched to the omni antenna, so I guess such things may have happened in the past.

I suppose there are also some considerations regarding the effects on the transponder of operating it so far off its normal voltage/current curve, but, again, this doesn't seem to have caused a problem after many years. <thanks to Stacey E. (Chuck) Mills W4SM for this explanation>

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite.

* Radio Sport-16 currently has its Mode A transponder turned off. The 435.504 beacon is the only one currently being copied. Reports out of Russia speculate that the transponder may be turned on for amateur use sometime in late May or June.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

May 9(Fri) 00:57z JD 9600bps
16(Fri) 01:35z JA
23(Fri) 00:29z JD 1200bps
30(Fri) 01:07z JD 9600bps

* Mir Simplex is still offline as of time of writing due to ongoing
problems on board the space station, any QSO reports would be appreciated.

* Space Shuttle Frequencies when in orbit.
Next SAREX mission scheduled for July 1997.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

Quote of the Day,
But Barry I thought cw could get through when nothing else can.
Very scientific! Much better than lies and statistics.
-- VK2MNA, "Response to VK2AAB", Stardate 15099.6
*
Quote of the Day,
It is a well known principle of Law in this country that no person
shall be judged guilty of a crime until the nature (or possibly
evidence
that a crime has been committed ie. a witness statement) has been
placed before him and he is given an opportunity to give a reply to
that
charge. The Principle is known far and wide as "Natural Justice".
-- VK2DN, "RE: COMPLAINT 6", Stardate 15099.6
*
Quote of the Day,
Hey, does that Pommy buffoon Flossey run the damn thing?
-- VK2XBR, "* YAWN? HOW TIRESOME! *", Stardate 01109.6
*
Quote of the Day,
You cannot - REPEAT CANNOT - catch a virus by reading any e-mail
message.
You can only catch a virus by executing an infected program or by
booting
from a diskette with an infected bootsector.
-- VK2DXV, "Re: WARNING Irina virus", Stardate 03119.6
*
Quote of the Day,
So multiplying 12 Million by 100,000, we have 1,200,000,000,000 Hmm,
Joe that
looks a bit bigger than the 360,000,000 people that live there. 3,333
times
bigger if I am not mistaken. Do you mean that each household in North
America
has 3,333 computers attached to the Internet?.
-- VK2GJB, "Re: SNIP IS THE ANSWER !", Stardate 01019.7
*
Quote of the Day,
Seems like the debate has ended in vk4!!!!!!
What are they going to do now ??????? Have a XXXX??????

-- VK2TGB, "Re: Debates rejected", Stardate 01019.7
*
Quote of the Day,
In summary, I suggest that:
amateur radio is good,
the Internet is also good,
the combination of amateur radio and the Internet is mostly good,
as for other topics involving timely change, there are some who
do not seem to be happy with amateur radio advancing.
-- ZL2CA, "Amateur radio & Internet & trunking", Stardate 28129.6
*
Quote of the Day,
Personally offensive and discriminating messages such as the ones I
have
recieved from this person are certainly not at all needed on the
Packet
network, and should be stopped.
-- ZL2UGF, "Reject", Stardate 28129.6
*
Quote of the Day,
I'm not THE critic. I'm just the one every Amateur knows. There are
hundreds
or thousands of others who voted with their feet while saying nothing.
-- VK2XBR, "* NO CENSOR, MY BUTTOCKS! *", Stardate 27089.6
*
Quote of the Day,
Have you ever noticed that "real amateurs" are only those amateurs who
like
what we like? ;->
-- VK5ZAF, "re: REAL RADIO AMATEURS", Stardate 10129.6
*
Quote of the Day,
A good debate is a healthy debate and no doubt it can be learned
from but
this is gone past the point of no return.
-- VK5IE, "Insanity", Stardate 01019.7
*
Quote of the Day,
If the network can't hack the mail, then the problem is in the network
and not in the mail (!)
It is up to the User(s) to determin what type of mail they want to
send
or read (eg "7+"). Sysop(s) task is to *carry* mail.
-- VK2FEX, "Re: AGE's comment on 7+", Stardate 05089.6
*
Quote of the Day,
The thing to do is to accept it, to DO things (experiment, develop,
upgrade,
assist others and be seen to do so) rather than engage in Canute-ian

considerations of whether we should contaminate our elite enclave with
the
vulgar Internet!
-- VK2BZC, "Re: Future concern", Stardate 27079.6
*
Quote of the Day,
OK boys, I'm fair game. Tell me what's wrong with me!!!
-- VK6BE, "What value? REALLY!!", Stardate 28069.6
*
Quote of the Day,
Bob,we can only hold your hand for so long, you've got to use some of
that
grey matter, you CAN'T READ IT WITHOUT PGP !!!
-- VK2YX, "Is this sensible asks Bob ??", Stardate 08079.6
*
Quote of the Day,
The PGP hornets nest seems to have been stirred again.
-- VK6YGQ, "Why use PGP?", Stardate 22069.6
*
Quote of the Day,
Having thrown all that into the ring, I will now run for cover !
-- VK2AAB, "Amateur Radio/Internet etc", Stardate 20089.6
*
Quote of the Day,
Amateurs are progressive
-- VK2AIA, "Wormholes and all that.", Stardate 29129.6
*
Quote of the Day,
Can someone tell me why this contemptible microbe saw fit to post such
an
idiotic piece of bullshit?
Is it simply representative of his miniscule mental status, despite
his own
assertions about rational debate without involving personalities?
I cannot comment on HIS personality. He doesn't have one.
-- VK2XBR, "* MARK AITKEN, HYPOCRITE *", Stardate 01019.7
*
Quote of the Day,
All in all it was a rotten debate.
Technical details.
Standard of debate....1 out of 10
IQ of contestants .... -40db
Bandwidth and Scope ...-60db
-- VK2AIA, "The debate verdict.", Stardate 27089.6
*
Quote of the Day,
I saw this in a message from VK5RQ. I guess he can't be all bad if
he's managed to teach his dog how to park a car. Do you think if we
asked him nicely he'd teach our dogs?

-- VK4XYL, "Re: VK5RQ's diatribe", Stardate 21089.6
*
Quote of the Day,
If Liolio stays with that pack of sharks, I hope they eat him for
breakfast.
-- VK2XBR, "* LIOLIO'S RESIGNATION Pt 2 *", Stardate 19099.6
*
Quote of the Day,
As from today VK2DN will not be allowed to use VK2WI. He was warned.
-- VK2AAB, "Re: RELIGIOUS BIGOT", Stardate 19099.6
*
Quote of the Day,
We should never allow ourselves to become complacent, we should
always
stretch to be right up there with the $$$$boys!
-- VK3JMA, "RE: IS IT STILL WORTHED ???", Stardate 10129.6
*
Quote of the Day,
As predicted, little Jack Robinson VK2XY rushed into print to re-live
his past glories, much like an old bull-moose who realises that an
upstart is about to challenge him for the leadership of the herd, and
that perhaps he's not servicing the females as well as he used to.
-- VK2KFU, "Re: Comments about Free Software.", Stardate 01019.7
*
Quote of the Day,
The Debate is driving the ZL's crazy, that will teach them All Blacks
not
to beat us at footy.....well, its sending us all round the bend
so
stop complaining.
-- VK2AIA, "Crazy", Stardate 01019.7
*
Quote of the Day,
and we will beat you at cricket as well, once you learn to bowl
properly.
-- ZL2TMQ, "Re: Crazy.", Stardate 02019.7
*
Quote of the Day,
Without discipline, society degenerates into anarchy. With anarchy
the needs of the many are swept aside with the few gaining self
satisfaction at their expense. With RIGHTS MUST come responsibility.
Self discipline TEACHES responsibility.

Hi, we'll get right to the point. We operate one of the finest
quality custom color labs in the USA. To introduce you to our
service we're offering the following Internet enlargement special:

Your color negatives hand printed on Kodak Supra Professional
16x20 inch paper. All negatives printed full frame.
Exhibition quality and color corrected---send us any size color
negative (35mm up to 4x5 inches).

* * * * * * * * * *

16 x 20 inch color enlargement special
5 identical prints from same negative-------$79
10 identical prints from same negative------$129

* * * * * * * * * *

Most orders 1 to 2 days in the lab. Add $6 priority mail shipping;
international add $10. We accept Visa and Mastercharge.

Mail your negative(s) and payment to:

=========
SpaceNews
=========

MONDAY MAY 12, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* WEBERSAT NEWS *
=================
WEBERSAT-OSCAR-18 is currently in MBL (Microsat Boot Loader) mode. There
are no picture transmissions taking place at the present time. The primary
downlink (437.102 MHz) is currently active with strong BPSK signals.

* LUSAT-OSCAR-19 NEWS *
=======================
LUSAT-OSCAR-19 is currently active on its secondary downlink of 437.125 MHz.
The satellite is reporting an uptime of over 690 days. The beacon text reads
as follows:

LUSAT-1>AMARG <UI>:
22 de Enero de 1997.
7 a&#65533;os !
7 years !
Gracias a todos los amigos que lo hicieron posible.

Amsat - LU8DYF.

* ITAMSAT-OSCAR-26 NEWS *
=========================
ITAMSAT-OSCAR-26 is currently transmitting telemetry and OBC status
information on 435.822 MHz. Over the past weekend, the beacon was
transmitting the following text message:

IY2SAT-1>AMSAT <UI>:
IHT97 software loaded. WOD enabled
IO-26 Command Team.

* DOVE-OSCAR-17 NEWS *
======================
DOVE-OSCAR-17 is also in MBL mode. Telemetry is being sent in an

abbreviated format. The following packets were copied on 10-May-97:

DOVE>MBLCTL <UI>:
V:9J EC:B0 ST:0804 IL:2F00:0CE9 IV:1800 EL:0D96 AH:0000 WS:2900

21:0E 2E:9B 31:AE 32:AE 0A:A3 0D:BC 10:AE

DOVE-OSCAR-17 controller Jim White, WD0E explained several months ago that new software is being uploaded to the satellite. The format and content of the current data transmissions reflect the latest attempt in troubleshooting the satellite and uploading new operating software. The satellite is presently sending data from a RAM based version of the Microsat Boot Loader program. The first line in packet above contains data about the operation of this software. The first characters in each item are the ID. Data values in hex follow the colon.

V is the software version number. EC is the EDAC error counter, and is accurate data. ST represents status data whose meaning changes with the interaction between MBL software and ground control software.

IL represents the memory address at which the current software is running followed by the offset to the IV value. This is an assembly language module written by Bob Diersing, N5AHD. The satellite has 256k bytes of EDAC memory in which programs and data are stored. The load address of 2000 hex is in 16 byte paragraphs. The program is loaded 131072 bytes above the bottom of memory (2F00h = 12032d X 16d = 192512d). The next value (0CE9h) is the offset in bytes to the location of the value (IV) that controls how often telemetry is sent. Knowing this value allows controllers to safely change it with a patch command. In January, controllers were using a version of MBL loaded at 2F00h to load the first two modules of the normal software. The first one (the kernel) loads in low memory. The second loads just above MBL at 3000h. The area of memory from 2F00h to 3000h isn't used by the operational software so controllers are able keep a copy of MBL there to use when the satellite is reset.

This version of software sends acknowledgements and occasional telemetry on 2 meters, eliminating the need to use the S-band transmitter whose modulator failed after launch. When the satellite resets to the ROM MBL, controllers can simply use it to execute the RAM MBL copy at 2F00h and use it to load other software.

IV represents the value of the telemetry timer. 1000h roughly corresponds to 10 seconds, 1800h is about 1 minute. However in space, the software must listen to and try to make sense of all the stuff it hears on its uplinks. That activity takes priority over everything else the software does. If the satellite copies many signals, it doesn't get a chance to gather and send telemetry as often. As a result, it sends telemetry at an interval that varies from a few seconds to a couple of minutes depending on what it copies on its control link receivers.

EL is the length of the module, D96 hex (3478 decimal) bytes. AH is a counter that represents the number of times the routine in the software that communicates over the AART bus timed out waiting for a response from

another hardware module. This counter has shown there is no problem with the bus. WS indicates the segment of memory being washed at the time this data was gathered. It changes randomly because all of EDAC is being washed at a fairly rapid rate and there is no timed sequence for gathering the data.

The remaining data is analog telemetry in the same format as the 'normal' DOVE software, channel number followed by raw value in hex. This is converted into engineering units by converting the hex data to decimal and applying the appropriate calibration coefficients that have been published. Most of this data, however, is not accurate.

* STS-84 NEWS *
==========
Ken Ernandes reports that STS-84 pre-launch nominal OMS-2 orbital data is now available on the AMSAT Web page at the following URL:

http://www.amsat.org/amsat/sarex/orbit.html

This data includes the time-independent TDR/EFG nominal state vector and the AMSAT and Two-Line Keplerian elements. The Keplerian elements were computed from the State Vector and the scheduled launch time using VEC2TLE. The scheduled launch time is 15-May-97 at 08:07:51 UTC.

The corresponding Two-Line Keplerian elements are as follows:

STS-84
1 99984U 97135.36851925 .00383797 60709-6 72207-4 0 14
2 99984 51.6579 251.1201 0103915 4.3240 184.3216 16.17747945 15

If the launch date or time changes, updated Keplerian elements can be computed from the State Vector and the new time using VEC2TLE. Note that the 99984 Catalog Number is temporary. A permanent Catalog Number and International Designator will be assigned after STS-84 is launched.

As with previous missions, the AMSAT Web page will be maintained with current orbital data for STS-84 during the mission. The STS-84 Nominal Mission Orbit Profile and State Vectors are also available on the AMSAT Web page at the following URL:

http://www.amsat.org/amsat/sarex/vectors.html

This file has a text summary of the major orbital events for the STS-84 mission and time-independent TDR/EFG state vectors for each event. The corresponsing Keplerian elements can be computed from the vectors (and providing a launch date and time) using VEC2TLE. VEC2TLE Version 9648 may be downloaded from: http://www.amsat.org/amsat/sarex/orbit.html

[Info via Ken Ernandes, N2WWD]

1514. NORAD Two-Line Orbital Element Sets (TLE995)

Newsgroup: rec.radio.amateur.space
Date: 1997-05-12 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5l84u7$7p3@blackbird.afit.af.mil>
Source record: 18974

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

I agree, Scott.
-editorial-
Dollar Bill's clunky OS has a bit too much in common with a quagmire for me.
I see that the world's fastest laptop is currently an Apple Power Macintosh. CISC technology is old hat. RISC is where it's at.

1518. Meteosat/GOES pictures

Newsgroup: rec.radio.amateur.space
Date: 1997-05-13 00:00:00 UTC
From: Agustin Estrada-Pena <Aestrada@posta.unizar.es>
Message-ID: <33783D3C.237FBAEF@posta.unizar.es>
Source record: 18778

Hi all,

I am a complete newbie in the topic, and I wish to obtain Meteosat/GOES pictures to read temperature and humidity. I can not buy a complete receiving station (expensive). Furthermore, I lack the knowledge to build my own equipment.

My questions:
- are there preassambled cards-receivers at relatively low cost?
- are there software packages (shareware if possible) to display the picture and obtain direct readout of temperature and troposphere humidity?
- what is Wefax service?

Thanks a lot.

So if you can replace the control head with a computer, the limits
should only be in the software... <:

Thomas HB9JNX, the author of the soundcard MODEM drivers for PC/Flexnet
and Linux, also wrote a 9k6 FSK/1k2 AFSK MODEM implemention for the ADSP2181
EZ-KIT DSP board. It is available from http://www.ife.ee.ethz.ch/~sailer/
Currently supported by PC/Flexnet only as it needs a special protocol
on the serial port.

Source record: 18781

By combining the benefits of the World Wide Web and E-mail, you can use the internet to set up satellite schedules to contact hams all over the world.

DX stations will also find that by establishing prearranged schedules, they can avoid the pile-up mania that makes working the states anything but enjoyable.
Using the same procedure one would use to work the Space Shuttle, you can now (thanks to the World Wide Web) work DX and stateside stations in an orderly and productive way.

Visit http://www.sarrio.com and estabish your own cybersched

1523. Schematic needed for crossed dipole

Newsgroup: rec.radio.amateur.space
Date: 1997-05-15 00:00:00 UTC
From: Gerald Laver <glaver@toolcity.net>
Message-ID: <01bc6148$4aae2e80$d5bc00d0@unit1>
Source record: 18783

Hi
I am trying to receive satellite transmission for weather on the 137 Mz range.
I came upon this photo and wanted to build one but I don't know the dimensions
or where to attach the wire. The source that I got this photo at said that the
crossed dipole consists two horizontal half wave dipoles mounted at right angles
to each other on a short mast.

Any help will be welcome.

Feel free to email me.

1527. HELP!!! FT-736 vs TS-790 vs IC-821

Newsgroup: rec.radio.amateur.space
Date: 1997-05-15 00:00:00 UTC
From: Juha Rantanen <rantjuh@jytol.fi>
Message-ID: <337B2CF9.682@jytol.fi>
Source record: 18787

I'm about to purchase a new rig and I would like to get some comments about these three rigs FT-736, TS-790 and IC-821. I have working experiments only of ft-736 and it was on a terrestial contest. I have no kind of experiments of satellite working so if you would so kind and reply to me on this newsgroup. The rigs are about the same price so that makes no difference between them. I'm about to use rig mostly on tropo, ES and aurora working, maybe in the future via satellite, that should also be considered.

To all radio amateurs

SB SPACE ARL ARLS015
ARLS015 Ham-astronaut Mike Foale to be active from Mir

Ham-astronaut Mike Foale, KB5UAC, took off on the space shuttle Atlantis Thursday, May 15, to swap places with colleague Jerry Linenger, KB5HBR, aboard the Russian Mir space station. Foale was one of several hams aboard Atlantis for the STS-84 mission, the sixth docking with Mir. He is scheduled to remain aboard Mir until September.

Other hams on the STS-84 crew include Commander Charles Precourt, KB5YSQ, and Mission Specialists Edward Lu, KC5WKJ, Carlos Noriega, KC5WKK, and Jean-Francois Clervoy, KC5WKG. The Atlantis is carrying badly needed replacement equipment for the Mir space station, including a new oxygen-generation unit.

During the STS-84 pre-flight press conference, Foale talked about ham radio and his stay aboard Mir. Foale said he took his ham radio exam in preparation for the STS-56 shuttle mission. ''My commander then (Ken Cameron, KB5AWP) was a pretty serious radio ham, and he encouraged the whole crew to do it,'' Foale said. ''Since then, I've enjoyed taking part in those activities, and I do look forward very much to using the ham radio on the Mir throughout my stay there to talk to anybody who can speak to me in either English, American, or Russian.''

Foale said he's open to talk about anything and with anybody. ''I really enjoy having slightly longer contacts than just the brief collections of QSOs we do on shuttle. As a long-duration crew member, I'm hoping that (hams) will allow me to talk longer with them, so I can have some contact with them and their countries and understand the people's conditions where they live as I fly over them.''

NASA says its Shuttle Web will provide continuous audio and video coverage of the STS-84 shuttle-Mir mission in a second test of the latest technology for streaming video over the Internet. Links to the video stream are available on the NASA Shuttle Web, http://shuttle.nasa.gov.

I looked at the URLs listed and don't find any reference to
soundcard packet implementation. Flexnet doesn't seem to have
any connection with the soundcard. It says it is a TCP/IP
Win95 program for computer to computer interface via RS232
port or some other obscure gadget.

If this is not correct, please educate me.

Ken K5MBV

1532. Spy people on the Net

Newsgroup: rec.radio.amateur.space
Date: 1997-05-16 00:00:00 UTC
From: benh@hotmail.com
Message-ID: <337b9d40.5358043@bang-olufsen.dk>

I present here my two most recent software which I hope they interest you.
they are progammed by Turbo C++ and run under Windows(3.11 and 95).
here is a short description of these two software.

1-Robot Spy 1.0
at my knowledge, this software is the first and the unique of its kind.
This software allow you to spy your friends who are on the net at the same time
of you, it permits to see exactly what they do on their screen, pixel by pixel,
anywhere, in the world, at the condition they are connected to the internet.
how does-it work?
it's simple, you send a file to the person you want to spy telling to him it's a
game or everythings else, the objectif is this person run the file. from this time,
a batch file is installed on his computor, and everytime this person use internet,
this batch connects him secretly on our server.
on your side, you , after the installation of the other part of the software every time
you want, you can connect on our server with your password and have the list of all the
persons who received your batch and who are connected at this time.
the only thing you have to do is to click on the name of the person you want to spy.
a window opens containing exactly the screen of the person spied, you can have
ten pictures per second with 256 colors, if you switch to balck and white mode you can
onbtain a real time sequence, approximatly 30 pictures by second.

Robot Mailer 1.1
The message you are reading presently is sent to more then 20,000 newsgroups with
this software. This program automates FreeAgent, and reach with a connection of 28,8 Kbauds
5,000 news per hours. It can also find a maximum of 50,000 e-mail adresses from internet
and
send a message in 4 or 5 hours. You can obtain with this sofware the most powerful tool of
mass transmittion on the internet.

Robot Spy 1.0.................20 US$
Robot Mailer 1.1.............20 US$
Both.............................30 US$

I'm sorry i can't accept credit card, but you can send an international money order to:

Ben Hedi Nassef
1481 Ste-Catherine est #7
Montreal, PQ, H2L-2H9
Canada

Don't forget to include your e-mail on a paper, you receice the software ordered in your
e-mail the day we receive the money order.

1536. DL0ART/am Balloon Launch on Sun 18-May-1997

Newsgroup: rec.radio.amateur.space
Date: 1997-05-17 00:00:00 UTC
From: Oliver Welp <welp@muenster.de>
Message-ID: <337D7356.7650@muenster.de>
Source record: 18796
Cross-posted to: nl.radio.amateur,es.rec.radio.amateur,rec.radio.amateur.misc,rec.radio.amateur.space,uk.radio.amateur

PLEASE FEEL FREE TO SPREAD THIS INFO IN ANY APPROPRIATE WAY!

-----5th Launch of DL0ART/am-----

The Nienberge Amateur Radio Group (NW Germany) plans another balloon
launch on sunday, 05-18-97.

This is our fifth flight and will be the first one carrying a
transponder. 40 kHz of the 70 cm band will be translated to 2 m. All
hams are invited to use this facility.

Still, the launch is not 100 per cent for sure. There is a 50 % chance
of rain / thunderstorms, which would keep us from going.

Final testing will be on Sat 05-17-97, 13:00 UTC.

This will be the last launch of DL0ART/am.

Planned ARTOB launch 05-18-97:

Launch: # 5
Launch date: 05-18-97 (Sunday)
Launch time: 1200 UTC
Launch site: Nienberge near Muenster, Germany, JO32SA

Call sign: DL0ART/am
QRG/mod.: (1) Telemetry beacon: 145.200 MHz (F2D & F2A)
(2) 2nd beacon: 144.987 MHz (F1A)
(3) Transponder: (J3E & A1A preferred)
Uplink: 432.570 MHz \ +/-
Downlink: 144.470 MHz / 20 kHz
+ beacon on 144.470 (A1A)
(4) RX for remote control on 70 cm and 10 m

Power: (1) 2 W
(2) 100 mW
(3) 2.5 W

Antennas: (1) groundplane
(2) turnstile
(3) big wheel - one for 70 cm, one for 2 m
(4) 70 cm: groundplane / 10 m: lamda/2

Diameter ballon: ca. 8 ft

Talk back of DF teams and ground control via repeater Osnabrueck, DB0CO (R 75). Reports are welcome, please call DL3YBQ. Or send QSL to DL9QJ via bureau, via PR or via Internet (preferred). Each report will be confirmed by a special QSL card of the balloon.

DL0ART/am on the Web:
http://buene.muenster.de/darc/artob/hombale.htm

Any suggestion or response is always welcome!
Best 73,
Oliver

1540. Info needed on 25/29 Ghz propagation

Newsgroup: rec.radio.amateur.space
Date: 1997-05-18 00:00:00 UTC
From: bart@es.co.nz
Message-ID: <bart.88.0A852722@es.co.nz>
Source record: 18800
Cross-posted to: rec.ham-radio,nl.radio.amateur,rec.radio.amateur,rec.radio.amateur.digital,rec.radio.amateur.space

Hi all,

I am trying to find any information on the propagation and behavior of QPSK transmisions in the 25 to 29 Ghz band.
Especially maximum range in good weather, rain and fog interference and reflection aspects, that is, does the signal reflect of buildings, trees or is it absorbed.

Any information on these bands is welcome, either amateur experiments or commercial data.

Please reply by EMAIL as I do not normally read these newsgroups :)

Thanks for all help,

Bart Kindt

Here's the drum. The signal goes out until it contacts a solid object
then it stops. If it encounters a partialy solid object it is attenuated.

Range at that frequency for a practical amateur aplication would be
around 100 metres.

I heard some CW on 144.470 in IO91, but it was weak. Might this have
been the device ?

MONDAY MAY 19, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* STS-84 NEWS *
===============
Atlantis launched successfully on its journey to the Mir space station on
schedule at 03:07:48 central time (08:07:48 UTC) Thursday morning. The
prime payload on the sixth Shuttle-Mir docking mission is astronaut Mike
Foale, who will take over for Jerry Linenger to extend the American mission
to the Mir for another four-and-a-half months. Foale will spend more than
four months on the orbiting Russian facility. He will return to Earth on
Space Shuttle Mission STS-86, scheduled for launch in late September.

Atlantis will again be carrying the Spacehab module in the payload bay of
the orbiter. The double module configuration will house experiments to be
performed by Atlantis' crew along with logistics equipment to be transferred
to Mir.

The STS-84 mission is scheduled to last 9 days, 3 hours, 44 minutes. Atlantis
is due to land back at Kennedy Space Center on May 24 at about 7:52 a.m. EDT
(11:52 UTC).

The STS-84 mission is part of the shuttle-Mir program, which is a precursor
to the International Space Station and consists of nine shuttle-Mir dockings
and seven long-duration flights of U.S. astronauts aboard the Russian space
station. The U.S. astronauts will launch and land on a shuttle and serve as
Mir crew members while the Mir cosmonauts use their traditional Soyuz vehicle
for launch and landing. This series of missions will expand U.S. research on
Mir by providing resupply materials for experiments to be performed aboard
the station as well as returning experiment samples and data to Earth.

The STS-84 mission and the work performed by Mike Foale during his time
on the Mir station will include investigations in the fields of advanced
technology, Earth sciences, fundamental biology, human life sciences,
International Space Station risk mitigation, microgravity sciences, and

space sciences.

STS-84 will involve the transfer of 7314 pounds of water and logistics to and from the Mir. During the docked phase, 1025 pounds of water, 844.9 pounds of U.S. science equipment, 2576.4 pounds of Russian logistics along with 392.7 pounds of miscellaneous material will be transferred to Mir. Returning to Earth aboard Atlantis will be 897.4 pounds of U.S. science material, 1171.2 pounds of Russian logistics, 30 pounds of ESA material and 376.4 pounds of miscellaneous material.

STS-84 is the 19th flight of Atlantis and the 84th mission flown since the start of the Space Shuttle program in April 1981.

[Info via NASA]

* MIREX NEWS *
==============
The MIREX group will be conducting one school schedule during the STS-84 to Mir mission. STS-84 is not a SAREX mission. The Shuttle will not be carrying any Amateur Radio equipment on board the shuttle. However, there will be one school schedule with the Hellenic American school in Lowell Mass while the Shuttle is docked to the space station Mir. The crew on Mir will be using the Kenwood TM-733 transceiver on board Mir to talk to the children. Shuttle pilot Charles Precourt will be answering questions from a group of 15 children during the 10 minute schedule.

This is only the second time a school schedule have ever been performed while the shuttle is docked to the Mir space station. The first took place during STS-71, when MIREX linked the Peter Noyles school in Sudbury Mass to Astronaut Charlie Preocurt while on Mir.

A temporary 2-meter station was installed at the school this weekend and tested. After the schedule, audio (.wav) files will be posted to the MIREX web page.

The STS-84/Mir combination should be visible during the early morning hours over the United States.

[Info via Miles Mann]

* OSCAR-11 NEWS *
=================
During the period 16-Apr to 14-May, reliable signals have been received from OSCAR-11's 145.826 MHz beacon. The UHF beacon on 435.025 was also heard on Wednesday April 30 at 15:40 UTC, when the satellite was being commanded by ground control. Binary WOD continued after the satellite had been switched back to 145 MHz.

Mirek OK2AKQ has heard the Mode-S beacon. Here is his very detailed report:

Date: 27-Apr-97 Rev #: 70383 Eq. Freq.: 2401500 kHz

15 : 51 350 67 332 3 2662 -46616 | 4 2401.461
```

Mirek's equipment, which uses a 55 cm dish with a two turn helix and low noise converter was described in detail in AMSAT-DL Journal (December 1993), and in OSCAR News 104, December 1994. It is interesting to compare this report with a similar one dated 12 December 1995 (before the beacon partially failed) when the signal levels ranged from S8 to S9 for similar ranges. Thanks Mirek for all your reports.

OSCAR-11 telemetry has been nominal. The battery voltage has recently improved to around 13.9 volts, and the internal temperatures have continued to fall due to solar eclipses. The battery temperature is now 4 degrees C or 18 degrees below the full sunlight condition.

Two WOD surveys have been transmitted of channels 0, 10, 20, 30 (-Y, +Y, -X, +X solar array currents. These show the eclipses, and pulsing of the array currents as the satellite rotates. If one listens to the downlink signal during the WOD transmission, one can hear a sudden additional tone as lines containing the constant block of numbers (eg. 0DF5175175175175F) representing zero current are transmitted.

Three AMSAT bulletins by Richard G3RWL have been uploaded the the satellite. Topics have included the UNAMSAT failure, RS-16 news, shuttle and MIR news. Bulletins always include current Keplerian elements for OSCAR-11, and often for satellites featured in the bulletin.

The operating schedule remains unchanged:

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

There have been several recent inquiries about suitable software for decoding the ASCII telemetry received from OSCAR-11. The recommended program is TLM2.EXE by Craig Underwood of the University of Surrey. The program is

fully described in the book "Decoding Telemetry from the Amateur Satellites", by G. Gould Smith, WA4SXM, which is essential reading for telemetry enthusiasts. Both the program and book may be available from your local AMSAT office. In case of difficulties, contact the AMSAT-UK office, e-mail: 100024.614@compuserve.com.

Listeners living in the UK may have an old BBC computer, which may be used for decoding OSCAR-11 without the need for any external interfaces or hardware. The AMSAT-UK BBC library contains several suitable programs. Details are available through Clive Wallis via e-mail at: g3cwv@amsat.org (NOT the AMSAT-UK office!).

Clive Wallis has now put a simple OSCAR-11 telemetry decoding program on his OSCAR-11 web site. It is written in BBC BASIC, but the package includes a small interpreter which enables the program to be run on any PC. Being written in BASIC, the program can easily be changed to suit individual needs, and is recommended to those wishing to experiment. Status decoding is included, and data from several channels may be combined. Examples of this feature are the calculation of total magnetic field, angle, and BCR efficiency. Please note that a capture program such a CTERM will also be required, which may also be downloaded from:

http://www.users.zetnet.co.uk/clivew/

[Info via Clive Wallis, G3CWV (g3cwv@amsat.org)]

* AMSAT/ARRL WORKSHOP PLANNED *
==========

Fried Heyn, the ARRL Southwest Division Director reminds us that an AMSAT/ARRL Workshop is planned for the Southwestern Division Convention on 12-14 September 1997 at the Riverside Convention Center, Riverside, California between 1:00 PM and 6:00 PM on Friday the 12th. Anyone needing more information should contact Rosalie White (WA1STO) at ARRL Headquarters.

* AO-27 NEWS *
==========

The AMRAD-OSCAR-27 downlink frequency changed from 436.800 MHz to 436.792 MHz on 01-Apr-97. Further information on AO-27 may be found at:

http://www.umbra.com/sats/

* FEEDBACK/INPUT WELCOMED *
==========

Comments and input for SpaceNews should be directed to the editor (John, KD2BD) via any of the paths listed below:

1549. WORK STUDY ABROAD

Newsgroup: rec.radio.amateur.space
Date: 1997-05-19 00:00:00 UTC
From: mats.hansen@reimers.se
Message-ID: <864061537@reimers.se>
Source record: 18809

WORKING or STUDY ABROAD

Now the book is here, (144 pages,more than 1000 addresses) which gives
you detailed information about work permits, wages-, working and loading
conditions, visas, travel expenses etc. abroad. You will also find
addresses to companies in Europe, USA, Canada, West Indies, Australia
and Far East, looking for employees within most professions.

INTERESTED ?

Send us a e-mail so will we send you our free brochure which will give
you further information about the book, don't forget to put in your
e-mail address in your e-mail.

mats.hansen@reimers.se

You can also buy the book directly from us by paying 18 pounds,
or $ 30 US through an international coupon to:

MAKEMA & Co
Box 3008
S-261 03 LANDSKRONA
SWEDEN

Hi,

> > Final testing will be on Sat 05-17-97, 13:00 UTC.
> >
> > This will be the last launch of DL0ART/am.
>
> I heard some CW on 144.470 in IO91, but it was weak. Might this have
> been the device ?

I'd assume that. In IO91, it should have been possible to copy the sigs
at abt 1245 - 1355 UTC. We have a report from IO93 for 1330 h RST 559.

!!!!!!!!!!!!!!!
First Pics are available: See URL
http://buene.muenster.de/darc/artob/homebale.htm

or ./homebal.htm for German version. A short report is also available,
but only in German (./ber_v5.htm) - English version will follow.

1551. NORAD Two-Line Orbital Element Set: Space Shuttle (97139.27506184)

Newsgroup: rec.radio.amateur.space
Date: 1997-05-19 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5lqjm3$6hn@blackbird.afit.af.mil>
Source record: 18811

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

1553. AO-27 Pass Noon, CDT ... *Test*

Newsgroup: rec.radio.amateur.space
Date: 1997-05-19 00:00:00 UTC
From: mbv@flash.net
Message-ID: <AE18B66302DF2B66.02BABFA2F0B7B99A.4DB295DF67950BBF@library-proxy.airnews.net>
Source record: 18813

Just put my FT470 talkie in the car with a
dual band amp and dual band gain antenna.
Give me a call on AO-27 tomorrow noon CDT.
The talkie worked OK with the old 2 meter amp, but
the new one is supposed to work duplex, where
the old one killed the 70CM while transmitting
on 2 meters and the duplexer had way too much loss
to be able to hear well.
73 Ken K5MBV

1555. NORAD Two-Line Orbital Element Set: Space Shuttle (97140.23632486)

Newsgroup: rec.radio.amateur.space
Date: 1997-05-20 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5lt7tk$alq@blackbird.afit.af.mil>
Source record: 18815

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

1557. N4OKL's Amateur Satellite Site

Newsgroup: rec.radio.amateur.space
Date: 1997-05-20 00:00:00 UTC
From: John - N4OKL <n4okl@amsat.org>
Message-ID: <5lsna9$shc@snews5.zippo.com>
Source record: 18817

Hello all and thanks for reading this,
I have redone my site now, NO FRAMES at all now so use the link below my email address.
Also i have redone my Links Page so check it out.

II have also joined the Amateur World Web Ring, http://www.webring.org (search under Amateur Radio) Check out Web Rings, Something for everybody...
As Always let me know what you think about my site, Please...
73, John - N4OKL

1559. Listening to Mir and Shuttle

Newsgroup: rec.radio.amateur.space
Date: 1997-05-21 00:00:00 UTC
From: Tobin Fricke <tobin@mail.edm.net>
Message-ID: <01bc6599$359b40a0$0200a8c0@bonusroom>
Source record: 18819

Hello,
I once heard Mir by accident while monitoring on two meters. I was wondering how one could reliably hear the Mir cosmonauts or the Shuttle astronauts on the HAM bands.. I assume that a satelite tracking program of sorts is necessary to predict when they'll be overhead, but are there specific times and frequencies to monitor? What do I need?

please reply via email, tobin@edm.net

Thanks,
Tobin KE6WHF

Message-ID: <3382E289.715F@mail.earthlink.net>
Source record: 18821

Greetings,
For all of you satellite antenna builders, I am announcing my web site devoted partially to antennas. I have numerous plans for yagi-udas, quads, j-poles, and collinear antennas. You can now also have a JavaScript to help you design a small yagi antenna. Go ahead and take a look at the page and if you like it, let me know I am always updating it with new plans and pictures. 73

1562. EU: Meteosat receiving with a long yagi?

Newsgroup: rec.radio.amateur.space
Date: 1997-05-21 00:00:00 UTC
From: bsmeeman@pi.NET
Message-ID: <Chameleon.970521154624.bert_s@web_pc.gv-asl.unisource.nl>
Source record: 18822

I have experience in receiving Meteosat with a home-made 3 and a 1 metre yagi in Holland. The yagi is described in VHF Communications (UKW Berichte) somewhere in 1990. Currently I am using the 1 metre version in the attick, in front of a window, together with a high quality pre-amp, also from VHF Comm.
OK, there is some noise in the picture, but even the synchronisation of the picture type works fine in JVFAX. Big advantage over a dish is that it is much smaller and I can use it inside my house.

Bert, pe1oot@amsat.org

1563. SAVE & EARN MONEY with FCI

Newsgroup: rec.radio.amateur.space
Date: 1997-05-22 00:00:00 UTC
From: gmed@geocities.COM
Message-ID: <3383A143.6ADF@geocities.com>
Source record: 18823

SAVE & EARN MONEY with FreedomStarr Communications Inc. (FCI):

Enjoy the LOWEST RATES in the nation with the 5th largest fiber optik network in the USA and SEE YOUR PHONE BILL ON THE WEB!

_____
FCI offers a flat rate 9.9 cent per minute rate for 1+ long distance AND 800 usage, and bills its customers in 6 second increments, instead of full minute increments like the big carriers do. This results in savings to consumers of an additional 10%-25%, depending on the types of calls placed.

FCI has also finished completing a "web page billing" system which is a great benefit to the consumer, as they are able to see the actual calls they place on a DAILY basis, as well as their cost for those calls. When in place, FCI will be the ONLY long distance company in the nation offering this unique service.

The Wall Street Journal, as well as the FOX New Channel, have recently featured FCI and their unique approach to the long distance market. FCI is a truly revolutionary company, and has been gaining acclaim across the nation and particularly on the internet.

As a reseller, FCI has the right to work with other carriers if they are presented with better rates for their customers. FCI has recently chosen to work with ITL (International Telecom Ltd) for its superior international calling rates, such as the following flat rates per minute (US origination):

UK .185
Russia .670
France .280
Greece .475
Israel .690
Japan .360 (This is NOT a typo!)
China .810

For more information on FCI and how you can even earn a great residual income by promoting their service like I do, you may visit my FCI web page at:

http://freedomstarr.com/?SA3610301

You will have the opportunity to sign up for service online, and get a free web page to promote the service, with an opportunity to earn up to 5% residual commissions on other people's usage. There is no "sign up" or "agent" fee to participate in the program.

I hope this note finds you and yours in good health.

1564. DL0ART/am - report 5th launch

Newsgroup: rec.radio.amateur.space
Date: 1997-05-22 00:00:00 UTC
From: Oliver Welp <welp@muenster.de>
Message-ID: <3384350D.2823@muenster.de>
Source record: 18824

DL0ART/am - 5th launch (18-May-1997)

After quite a long break, we did it again... the 5th launch of our
balloon DL0ART/am was on 18-May-1997. The main issue about this
flight was the transponder (mode B), which worked quite nice, and
many hams took the chance to use it.

More information about DL0ART/am (pictures!) can be found at:

Internet: http://buene.muenster.de/darc/artob/homebale.htm

PR: DB0EA-8 (mailbox digipeater Muenster) -> ARTOB

Balloon launch 18-May-1997:

Launch: # 5
Launch date: 18-May-1997
Launch time: 1214 UTC
Launch site: Nienberge near Muenster, NW Germany, JO32SA

Payload DL0ART/am:
QRG/mod.: (1) Telemetry beacon: 145,200 MHz F2D & F2A
(2) 2nd beacon: 144.991 MHz F1A (call & info text)
(3) Transponder (J3E and A1A)
Uplink: 432,570 MHz \
Downlink: 144,470 MHz / +/- 20 kHz
+ beacon at 144,470 MHz (A1A)
(4) RX for remote control on 70 cm and 10 m (not used)
Power: (1) 2 W
(2) 100 mW
(3) 2.5 W
Antennas: (1) groundplane
(2) turnstile
(3) big wheels for 2 m and 70 cm
(4) 70 cm: groundplane / 10 m: lambda/4 vertical
Power supply: (1) & (4): 5 D cells LiSO2 in series (=14.4 V, 6 Ah)
(2) 1 D cell LiSO2 (3 V) and step-up to 9 V
Diameter ballon: ca. 8.5 ft
Gas: hydrogen
Parachute: ca. 8 ft
Weight: about 4700 g (over all)

The balloon has a gaz valve which can be opened to reduce the lift rate or start the touchdown procedure.

Balloon Team Members:

Ground Control: Armin (DF1QE) + Fritz (DF9XE)
DF Control: Joachim (DL3YBQ) + Ralph (DG3YEI)
DF Teams: Norbert (DL1YBR) + Oliver (DL9QJ)
Wilhelm (DG5YGF) + Kurt (DD3QQ)

Talk back of DF teams via repeater Osnabrueck, DB0CO (R 75).

(UTC)
10:30 Meeting of the team
11:15 Arrival at launch site (Muenster-Nienberge, JO32SA)
11:30 Phone call to air control Duesseldorf: launch permitted
11:40 Filling the balloon
11:50 Payload attached
12:03 Additional filling, lift rate was not sufficient
12:05 Transponder tested -> Go
12:07 Telemetry beacon switched on -> Go
12:10 Phone call to air control Duesseldorf to announce the launch
12:14 LAUNCH
12:16 Altitude already 3,065 ft
12:35 Problems ocurred on decoding the telemetry; data obviously invalid
(...)
13:55 Balloon bursted; telemetry data seem valid again
14:00 TOUCHDOWN (crash...) As we found out later, the balloon hit the roof of a farm house nr the city of Greven (JO32TC) and broke a tile (was already fixed when we came to the house... but the place could still be recognized by the red color left by the balloon).

The owner was a bit surprised (only a bit, it is a Muensterland farmer...!) and, since he read something about "explosives" on the package, called the police. The officers (almost correctly) recognized it as a weather balloon and took it to the Greven police station (was it arrested now?!). From there, they called Armin, DF1QE, on his cellular phone, since his number was written on the boxes. Shortly after that, we were able "recover" the equipment... and the beacons and transponder were transmitting when we arrived at the police station.

Tochdown site: nr Greven (JO32TC)
Touchdown distance: 7 miles

Flight Data

| Launch 14:35 h 15:55 h Touchdown

```
------------------+-----------------------------------------------
Altitude | 280 ft 12,125 ft 12,700 ft (885 ft)
Outside Temperature| 74 deg F 22 deg F - 5 deg F 46 deg F
Inside Temperature | 90 deg F 82 deg F 23 deg F 22 deg F
Battery Voltage | 14.177 V 14.311 V 14.218 V 14.059 V
-------------------------------------------------------------------
```

Results:

The telemetry data were not very useful this time; since they obviously were not correct during the time period 12:35 - 13:55 UTC. We assume it was because of the very difficult flight conditions - the balloon got into a thunderstorm, which means high humidity and low temperature. We have never had problems concerning the telemetry before; on this flight, we had trouble with during final testing and during the flight... The table shown above might not tell the very truth, but we think these data we copied are at least likely.

The transponder was a big success and worked better than expected, even though we got a report (after the flight) that we were still causing some intermodulation on the 2 m band. But the device had never been tested under "real" conditions. We already were afraid that the transponder hardly would be used, since during our final test, we did not find any stations that were able to help us testing (seems not very many people have allmode equipment for 2 m and 70 cm). But we were wrong, the transponder was very busy, sometimes the QSOs sounded almost like in a contest... Among others, stations from all over Germany, from Belgium, Switzerland, the Netherlands and Great Britain were able to use it.

```
-------------------------------------------------------------------
Here is the logbook of DL9QJ/m's transponder QSOs:
(SSB; using IC-820H / mag mount verticals)

UTC Call QTH Name
-----------------------------------------------------

1318 DG9BHV
1325 DK1KR
1340 HB9RDE Rolf
1342 DK3WG
-------------------------------------------------------------------
```

The balloon hulk was causing the main problem this time. I think we got a very old piece, and because of that and some not very professional handling during launch preparations, we were not able to open the gaz valve the get to balloon to land, but it bursted instead.

The time between DFing had been increased to 15 minutes (was: 10 minutes), which gave the DF teams better chances "to make more miles". But sometimes, the 15 minutes periods still were a bit short.

Our 2nd beacon (144.987 MHz) obviously again (like during our second flight) had problems with frequency stability. Its deviation caused problems on FM repeaters on R0 (input on 145.000 MHz) and kept them open (concerned: DB0UH). Again, the reason seems to be the flight conditions (see above) - we had the same weather during our second flight when the same problem ocurred. Of course, we regret any inconvenience caused by that fault!

If you heard our sigs, pse send QSL via PR / Internet / buro - all will be answered with our DL0ART/am QSL cards! Any suggestion or response is always welcome!

The DL0ART/am team hopes that all of you enjoyed this experiment, as well as our previous flights. We regret that we have to terminate the project now. This is due to a substantial lack of man power (the same 2 or 3 people were always doing all the work...) and - which is the main reason - financial resources (e. g. insurance is DM 500.00 / USD 300.00 p. a.). We are just a small local amateur radio group (subdivision of DARC) and no longer able to put our money into this project.

Maybe, you will here of DL0ART/am again inspite of this - he, we have a working transponder now! Possibly we will launch a captive balloon during our annual fieldday (okay, a few hundred feet is much less than what we had on this flight, but North Germany is quite flat, and it would provide a chance for some nice QSOs). An alternative would be the flight of a manned hot air balloon, on which the transponder could be a piggyback.

Anyway, we enjoyed this project and wish give our thanks to everybody who participated.

Best 73, Oliver

1565. Nova for Windows V1.0M

Newsgroup: rec.radio.amateur.space
Date: 1997-05-22 00:00:00 UTC
From: Frikkie <pottie@global.co.za>
Message-ID: <01bc66c5$b5357060$LocalHost@pottie>
Source record: 18875

Can anyone please help with a Program for Nova for Windows V1.0M to save
Information,Etc. Long x Lattetute.
Im still new in this stuff.
Im also looking for a program to learn the Rules and Reg from the Amateurs
from the Computer.
Thanx a Million.
Frikkie

Source record: 18876

Howdy from Helena, Montana (KA7YAO) Bill - Several of us folks here in Helena and Lincoln, Montana will be operating a special station from Grid Square DN37 in Montana June 21 (Saturday) maily on 6 meters, 2 meters SSB, and some HF. However, I will be on the RS-10 and RS-12 Satellite for the passes that day. If anyone needs the above Grid Square from Montana look for KA7YAO on those two birds. Its going to be a fun day for a lot of new hams on HF, 6 meters, 2 meters, and satellite. We will be on a mountain top (8200 ft) just west of Lincoln, Montana. Hope to meet you on the birds.
Bill

1567. NORAD Two-Line Orbital Element Set: Space Shuttle (97143.25000000)

Newsgroup: rec.radio.amateur.space
Date: 1997-05-23 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5m4vtc$44g@blackbird.afit.af.mil>
Source record: 18877

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Dear Gerald,

The cross dipoles should be fed in pahse quadrature which causes them to
produce circular polarisation. If you bend the top driven elements down
at 45 degrees then you will obtain a near omni-directional radiation
pattern from horizon to horizon, so it is unecessary to point the
antenna.

At work we have designed and used such a hybrid antenna for a Navy platform installation. You should place a masthead amplifier at the top to counteract the loss in gain due to pattern spread.

The quadrature feed can be organised by feeding one dipole with a quarter wave more of feedline than the other.

Source record: 18879

Oops - I better answer your question too.

Yes the cross-dipoles are 1/2 wave dipoles which can be mounted about
1/4 wavelength from the reflectors, which should be slightly longer than
1/2 wave total length (say 10%).

If you bend the driven element you can mount them so they are about 8 or
so inches above the reflectors at the end - it is not critical.

The spacing will affect the feedpoint resistance. The closer they are to
the reflector the lower the feedpoint resistance; you could use this
separation to obtain a match to the cable.

The feedpoint will be 1/2 the resistance of each element feedpoint
when the lines are matched.

1573. KPC-9612+ and WISP Program

Newsgroup: rec.radio.amateur.space
Date: 1997-05-25 00:00:00 UTC
From: realbill@phoenix.net
Message-ID: <3387927b.22075346@news.phoenix.net>
Source record: 18883

I am using the KPC-9612 Plus TNC and the WISP program for satellite communications on the 9600 baud birds (UO-20, KO-23, and KO-25). I have one slight problem in that with the configuration that I have the TNC does not go into KISS mode and FULL Duplex when the MSPE portion of the WISP program is running. As a result of the TNC not entering KISS mode and FULL Duplex the system locks up on recieve when the program transmits a request for directory fill to the bird that I am working at the time.

I have found a work-around in that I multitask to the terminal program of windows and manually place the TNC into the required FULL Duplex and KISS mode and then all works fine.

Was wondering if anyone is running this same software and hardware and would be willing to share their setup conditions with me.

Bill, W5BBR, Brenham, TX.

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
use the satellite if the beacon frequency wavers, or if downlink signals
```

chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse.

The chances of damaging AO-10 by uplinking during "FMing" are probably remote. The caution mainly stems from a theoretical consideration. AO-10's latching relays are set to the omni antenna and the transponder is on in Mode-B configuration. This all turns out to be perfect since we can't control the attitude, etc. Each time there's a power spike the chance exists that the IHU could have a "seizure" and blurt out a pulse to switch the antennas to higain, switch the transponder off or whatever. Of course these spikes occur every time we come out of eclipse, but the idea is to do what we can to minimize the number of power spikes. Occasionally spikes have "activated" the IHU in the past and caused the beacon to send out nonsensical data rather than the current constant carrier for short periods of time. ..and it isn't clear when AO-10 switched to the omni antenna, so I guess such things may have happened in the past.

I suppose there are also some considerations regarding the effects on the transponder of operating it so far off its normal voltage/current curve, but, again, this doesn't seem to have caused a problem after many years. <thanks to Stacey E. (Chuck) Mills W4SM for this explanation>

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite.

* Radio Sport-16 currently has its Mode A transponder turned off. The 435.504 beacon is the only one currently being copied. Reports out of Russia speculate that the transponder may be turned on for amateur use sometime in late May or June.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

1997 May 23(Fri) 00:29z JD 1200bps PSK MailBox
30(Fri) 01:07z JD 9600bps FSK MailBox
June 6(Fri) 08:25z JA
13(Fri) 00:39z JD 1200bps PSK MailBox
20(Fri) 09:41z JD 9600bps FSK MailBox

27(Fri) 00:11z JA
July 4(Fri) 09:13z JD Digi-talker
8(Fri) 09:06z JA

* Mir Simplex has not been reported to be active at this time but
Ham-astronaut Mike Foale, KB5UAC, who has just joined the MIR crew has
indicated in a pre-flight interview that he intends to be active on
Amateur Radio.

* Space Shuttle Frequencies when in orbit.
Next SAREX mission scheduled for July 1997.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

1576. EU: Meteosat receiving with a long yagi?

Newsgroup: rec.radio.amateur.space
Date: 1997-05-26 00:00:00 UTC
From: Rafael Garcia <ea4rj@ea4rj.ampr.org>
Message-ID: <3389B683.1E81E516@ea4rj.ampr.org>
Source record: 18886

Hi all,

I'm looking for experiences of anyone using a long yagi to receive Meteosat over Europe. Perhaps would be better a parabolic dish, but not found any source yet.

I'm considering a 44 elements, 20dBd, 3 meters long yagi by Down East with a preamp attached to the antenna. It should be enough, in comparision with a one meter dish.

The receiver will be an IC-R100 (the same that I use to get NOAA and Meteor pictures in 137MHz), and the excellent WXSat decoder program.

Thanks in advance for any kind of info.

Best,

--

Hi

I am curious how your receiver works for 137 mhz apt, as the bandwidth would normally be either too narrow or too wide!..did you modify the I.F. bandwidth?

Jim

SpaceNews
=========

MONDAY MAY 26, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* PHASE III-D WEB PAGE UPDATE *
==============================
Bdale Garbee, N3EUA, recently updated the AMSAT-NA RUDAK Web page to include
a few more pictures from Lyle Johnson, WA7GXD. The three new pictures show
various aspects of the process of turning on the DSP modem board.

The page may be accessed at the following URL:

http://www.amsat.org/amsat/sats/phase3d/rudak-u/

Bdale hopes to make another significant update to the page shortly.

[Info via Bdale Garbee, N3EUA]

* FO-29 OPERATION SCHEDULE *
============================
The following is the current FO-29 operating schedule:

1997 May 16 (Fri) 01:35z JA
23 (Fri) 00:29z JD 1200bps PSK MailBox
30 (Fri) 01:07z JD 9600bps FSK MailBox
June 6 (Fri) 08:25z JA
13 (Fri) 00:39z JD 1200bps PSK MailBox
20 (Fri) 09:41z JD 9600bps FSK MailBox
27 (Fri) 00:11z JA
July 4 (Fri) 09:13z JD Digi-talker
8 (Fri) 09:06z JA

The FM Digitalker and digital downlink can be copied on 435.910 MHz.
FO-29's older brother, FO-20, continues to provide Mode JA service.

* AMSAT-UK FINAL CALL FOR PAPERS *
==========
The 12th AMSAT-UK Colloquium will be held at Surrey University, Guildford, Surrey, U.K., from Friday 25th to Sunday 27th July 1997. This year's event will comprise three days of technical and operational matters only; there will be *NO* "political" subjects.

AMSAT-UK invite authors to submit papers, about amateur radio space and associated activities, for this event and for the "Proceedings" document which will be published at the same time. We normally prefer authors to present the papers themselves rather than having someone else read them in the authors' absence, but we also welcome "unpresented" papers for the document.

Abstracts of Papers should be submitted as soon as possible; the final date for full documents is 15 June 1997 in order that the "Proceedings" document be available to participants.

Submissions should be sent *ONLY* to G3RWL, via the following routes:

Internet e-mail: g3rwl@amsat.org
Packet Radio: G3RWL @ GB7HSN.#32.GBR.EU
Satellite: AO16/19/22/23/25
Terrestrial mail: R W L Limebear G3RWL
60 Willow Road
Enfield EN1 3NQ
United Kingdom.

(G3RWL has no FAX)

Information about the Colloquium is available on the World Wide Web pages at the University of Surrey at the following URL:

http://www.ee.surrey.ac.uk/CSER/UOSAT/amateur/colloq97.html

Send all other inquiries about Colloquium-97 to the AMSAT-UK office:

AMSAT-UK
London E12 5EQ
England

[Info via Richard, G3RWL - AMSAT-UK Colloquium Program organizer]

* G2UK - SILENT KEY *
==========
On a sad note, Arthur C. Gee, G2UK, the former Chairman of AMSAT-UK, passed away on 19-May-97 after being re-admitted to the hospital after complications following a hip operation early in the month. He was 84.

"Doc" Gee, as he was referred to by many friends, was an AMSAT-UK member from the formation of the Organization (membership number 0025). He became AMSAT-UK's Chairman in 1979, and resigned from office in 1992 because of ill health. He was a friend to many and will surely be missed. He was active on the RS satellites up to three weeks prior to his death, and will be remembered as the writer of the Satellite column in "Radio Communications" for several

years.

Rest in Peace Arthur. A good friend and advisor to a vast number of people.

[Info from Ron Broadbent, G3AAJ via Richard Limebear, G3RWL]

QST QST QST

I would like to report, and happy to report that Astronaut Mike Foale is already active on 2-meters from the Mir Space Station. I had an 8 minute QSO with Mike on May 24, 1997 at 14:47 hrs UTC from my QTH in Tulsa, Oklahoma. Mike got the Kenwood 733 radio into a "lock" mode and asked me for help in getting it back into the normal operating mode. I replied that I was not familiar with that radio, but I would try to find an answer and relay the instructions on a later pass.
His signal was 5/9 on a 10 degree pass to the southwest.

I was using an Icon IC-271H all-mode running 50 watts into a home-brew 5 element Yagi up at 35 feet with no pre-amp.

It's good to hear the Mir again!

73's Everyone...

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

FREE - BRAND NEW Macintosh HAM TEST SIMULATORS

Upgrade Fast!

S I M U L A T E the test and get S T I M U L A T E D!

Studying for the ham tests and have access to an Mac? If it runs System 7.XX
and has 4 Meg or more of memory, you're in business with WD1V's Ham Test
Simulators, Morse Programs, Ham Radio.FAQ, and superb "how to study" material.

The newest Macintosh Ham Test Simulators are HERE (and THERE if you can FTP)!

WWW http://www.mv.com/ipusers/wd1v

Or you may obtain a version "6" Ham Test Simulator by mailing me a *FORMATTED
disk HD disk (1.4 M) and include a Self Addressed and Stamped disk mailer for
the return. Specify the test you need.

Simulator Name Version Valid Until

Advanced Ham Test 6.0 June 30, 1998
Extra Ham Test 6.0 June 30, 2000
General Ham Test 6.0 June 30, 1998
Novice Ham Test 6.0 June 30, 1997
Technician Ham Test 6.0 June 30, 1997

Your comments and suggestions for future versions are always welcome.

ATTN: PC and other platform users:
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
My Home Page also links to sites that offer live ham test simulations right
over the net - plus links to Ham Radio.FAQ and VE session schedules.

Good luck with YOUR next test!

73,

1584. Macintosh Ham Radio Users Group = Macnet

Newsgroup: rec.radio.amateur.space
Date: 1997-05-28 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-2805970611100001@wd1v.mv.com>
Source record: 18894
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

There is an informal group of amateur radio operators that use Macintosh computers called "Macnet" with > 800 members world-wide.

We stay in touch with each other via packet & Internet and we have a HyperCard stack that tells the story of each of us called "Macnet Roster" that list

o CALL SIGN @ HOME PBBS
o FULL NAME
o Street ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

Macnet members can then communicate with one another directly or use our Macnet Moderated Mailing List to pose comments or questions to all of us on the Net.

To join Macnet, put YOUR INFO (via EMAIL or via disk using TEACH TEXT on a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER").

Or connect to our home page via the WWW http://www.mv.com/ipusers/wd1v

-------<sent to all new Macnet Subscribers & Macnet Roster Updates>---------

Welcome to Macnet!

A trip to my home page also reveals there are many superb files and programs for amateur radio operators that want to use Mac computers. See more details in January 1997 QST, page 100. http://www.mv.com/ipusers/wd1v/

* Ham Radio Test Simulators - where you can go from Novice to Extra Class practicing the actual tests right on your Mac! Check out the info on the new NO CODE license or scramble your neurons and learn Morse on the Mac too!

* Macnet Email Reflector - send an Email to all Macnet users on the Internet.

* Macnet Roster - a virtual "Who's Who" HyperCard stack with > 800 entries giving the names, addresses, phone numbers, of radio operators all over the world that are using Macs. Check out their projects and

their passions and put a design on your Mac Radio future. See what neat things are being done with Macs and Ham Radio!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of the latest - much of it with FTP links so what you see is what you can get your new programs with just a click.

* Ham Radio.FAQ - compiled on a Mac with a lots of links to great Mac FTP sites for radio, electronic engineering, and similar data.

1586. NORAD Two-Line Orbital Element Sets (TLE003)

Newsgroup: rec.radio.amateur.space
Date: 1997-05-28 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5mic6v$oqk@blackbird.afit.af.mil>
Source record: 18896

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

Has anybody talked with the Yankee ticket holder with a Limey accent on
the Ruskie spacecraft yet?

1589. NAVSPASUR receiver site

Newsgroup: rec.radio.amateur.space
Date: 1997-05-28 00:00:00 UTC
From: thomsona@netcom.com
Message-ID: <thomsonaEAwF96.Mzv@netcom.com>
Source record: 18899
Cross-posted to: rec.radio.amateur.space,sci.space.tech

The NAVSPASUR transmitter at Lake Kickapoo, Texas usually
gets the publicity because of its impressive size, but apparently
the receiver sites aren't tiny, either:

From Commerce Business Daily, April 17, 1997 PSA-1826

ANTENNA VERIFICATION TESTING
The Dahlgren Division of the Naval Surface Warfare Center, Dahlgren, Va
is seeking sources on a competitive basis for an antenna verification
testing and installation of replaced/installed spare components at the
NAVSPACECOM Elephant Butte, New Mexico Field Station.
These antennas are used in a one-of-a-kind earth satellite signal
detection receiver. This receiver is in use at six NAVSPACOM Field
Station. The antennas are constructed of Dipole Elements (144 per 600
foot array), coaxial transmission line combiners, tees, elbows, expansion
joints and 7/8 inch, 3-1/8 inch transmission lines. The contractor
will test fifty 600 foot arrays at the Elephant Butte, NMNAVSPACECOM

Hello,
I am working on a comprehensive list of web sites by hams.
If you would like to add a Personal Web Page by a ham, then please go visit
my web site at http://www.geocities.com/HotSprings.com/9732/hams.html, and
fill out the application form. I will post it as soon as I can. I have
totally revamped the website, so tell me what you think!

1592. KEPS, what happend?

Newsgroup: rec.radio.amateur.space
Date: 1997-05-29 00:00:00 UTC
From: rmanns@saba.kuentos.guam.net
Message-ID: <5mjv8s$hhi@lehi.kuentos.guam.net>
Source record: 18902

Does anyone know why the KEP postings have stopped getting posted. I am talking about the longer listing two liners, not the ARRL postings. I think the listing I am looking for is by Dr. Kelso?? spelling probably wrong.

Just get them from his FTP site: 129.92.1.66 (directory /pub/space).

(it has a hostname, but the nameserver for it is hard to reach. often the
name cannot be resolved but the site is accessible normally. so I use the
IP address mentioned above)

Considering the sporadic nature of the internet newsgroups, I go right to the source instead of waiting for a posting. Checkout Dr. Kelso's web site at http://www.grove.net/~tkelso, the latest keps are available for downloading.

1598. Computer Control for ICOM rigs for satellite work

Newsgroup: rec.radio.amateur.space
Date: 1997-05-30 00:00:00 UTC
From: Roger Rehr <rrehr@epix.net>
Message-ID: <01bc6c94$7bb99210$5d42e0c7@rrehr>
Source record: 18908

I recently came across a wonderful new (to me) station control program primarily designed for those of us who use the Analog amateur satellites. It is the first Windows program I have found that provides automatic Doppler correction for the ICOM series via the standard ICOM CI-V interface WITHOUT the need for KC Tracker or another add-on! It also supports Kenwood rigs and many antenna control interfaces, including KC Tracker, the AEA-ST1, TrakBox,...

It works great for me with my ICOM 735 and SSB Electronics transverter.

Paul Willmott VP9MU wrote this delightful program (called "The Station Program") and it is available at 199.172.219.213/stat.htm.

To use it you must make a donation of 15 Pounds Sterling (+20% if you are not a member of UK-AMSAT) to UK-AMSAT to get a registration number so that the program will run. The donation was well worth it to me!! It may be that AMSAT-NA can do the same for you...I wanted to run it very badly on Memorial Day, and so AMSAT-NA was not available.

AMSAT-UK's phone number is 44 (0) 181 989 6741
and FAX 44 (0) 181 989 3430.
The country code is 011 (from my QTH I dial the country code first).

1601. How do I request telemetry data from amateur satellites?

Newsgroup: rec.radio.amateur.space
Date: 1997-05-30 00:00:00 UTC
From: moschler@ts.umu.se
Message-ID: <338f3970.54502605@news.luth.se>
Source record: 18911

Hi!

I'm a student at the Swedish Space Engineer Campus and right now I'm working with a couple of friends on our final degree project. It's a lab for our Satellite technique course. None of us have ever used amateur satellites so we thought this would be a wonderful practical for the students. We are, after all, space engineers.. :o) The title of the lab is "practical in groundstation technology"

Now to our question, if anyone could answer it. Is the telemetry data from the amateur satellites transmitted 24h a day or do we have to transmitt a request string to the satellite? If it's so, we have a huge problemm :o) Well, we could listen when other people are requesting it, but then we nedd a lot of luck..
I hope someone can answer this question...

Have a nice summer, if you live on the north side of the globe.....
BEST wishes from
Krister Sundstroem, programmer for the SamSat-team.

To all radio amateurs

SB SPACE ARL ARLS016
ARLS016 Mike Foale, KB5UAC, aboard and active From Mir

Ham-astronaut Mike Foale, KB5UAC, who swapped places with Jerry Linenger, KC5HBR, aboard the Russian Mir space station in mid-May, already is making good on his promise to keep Mir active on the ham bands. Foale is scheduled to spend more than four months on the space station before returning to Earth in September.

Al Lark, KD4SFF, of Greenville, South Carolina, was among the first US stations to snag a QSO with Foale (who was using R0MIR at the time). During a Memorial Day contact, KD4SFF got a chance to try out a few Russian phrases during the QSO. The Mir frequencies are 145.800 MHz (downlink) and 145.200 MHz (uplink).

Foale has FCC permission to speak with unlicensed third parties via ham radio during his stay on Mir. Foale also has permission to use the German Space Amateur Funk EXperiment (SAFEX) equipment on Mir in addition to the 2-meter gear.

Dave Larsen, N6CO, is the US Mir QSL manager for contacts made with Mir crew members. QSL cards must include date, time, and mode of contact. He does not handle cards for SWL reports. To confirm contacts with the Mir packet radio personal message system (PMS), include the message number issued by the PMS on your QSL. Send QSLs along with a business-size, self-addressed, stamped envelope to: David G. Larsen, N6CO, Box 1501, Pine Grove, CA 95665 USA. For further details, get in touch with Larsen via e-mail at docvolcano.net.

WWW Message Board Experiment

Folks,

May I engage your services for an experiment...

As you know, I set up a "Personal Web Server" on my
home computer running Win95. Previously, the server
had only a copy of my web page...

But, now...

I have taken the mirror of my home page off and installed
an automated message/discussion group faility called aptly
"Short Circuits"...

Please go to my home page http://www.qsl.net/k7on and click
on the rotating arrow and while I'm connected you'll be then
connected to my personal server where you can access the messages
entered by you and others.

It is threaded and resembles a Usenet newsgroup, but will not
be spammed as it is not connected to the Internet by a static
IP address...(this is part of the experiment, BTW...)

Please give it a shot!

I'll be watching for messages on there and I've put 2 already myself.

73, Brian http://www.qsl.net/k7on

Hello friends,

Currently, I subscribed to AMSAT to receive their keppler-sets.
In this newsgroup, such a sets are also posted.

Now, I have three sources where I could obtain sets from....
Because all these sets seemed to origin from other sources,
which are THE BEST ??? Which are the most accurate (especially MIR) ?

Can anyone explain this to me ? TNX :-)

73!
Robert Joosten, NL-11891.

1609. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1997-06-01 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5mr0g9$kpq@blackbird.afit.af.mil>
Source record: 18919

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW,

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from

archive.afit.af.mil (129.92.1.66)

in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
```

(Letters, blanks, periods, plus signs = 0; minus signs = 1)

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

Hello All,
My name is Mark, I maintain a list of Surround Sound recordings in all formats on the internet to help bridge the gap between recording engineers producing Surround recordings
and the unaware public.
The list not only includes recordings distributed via Vinyl, CD or Tape but also includes
Radio Broadcasts and television.
I am currently working on updates to all the discographies and would like to include any
new releases that you might be aware of that I have missed.
Any help you might be able to pass on will be greatly appreciated by many folks.
Thanks for your efforts
Best wishes
Mark

Source record: 18825

Greetings from Yuba City;
I have been using M2 antennas for mode b, mode a, mode j since 1994 and they are superb. I have, but have not yet put up, a KLM 40CX, 435 MHz crossed yagi and its construction is equal to that of the M2. The M2 antenna on 2m is the 14 element crossed yagi. I don't run much power so my fun is from the gain of the array.

I am currently establishing amateur radio telescope. I would like to
share my ideas with anyone interested in radio astronomy and even to
smake kind of amateur radio telescope network.
Does anyone have a good schematics for 4GHz radio telescope, basically
back end?

Thank you,

Velimir Dedic

Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 is currently offline in sleep mode. The sun angle to the
solar panels is such that not enough light is reaching them to power the
```

transponder therefore ground control has put the satellite into sleep mode for the next several weeks.

* Radio Sport-10/11 has been inactive for several days now. Beacons and transponder appear to have been shut off but no official reports can confirm if this is the case or if something else has happened to the satellite.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite.

* Radio Sport-16 currently has its Mode A transponder turned off. No beacons are presently being copied. Reports out of Russia speculate that the transponder may be turned on for amateur use sometime in June.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

1997 May 30(Fri) 01:07z JD 9600bps FSK MailBox
June 6(Fri) 08:25z JA
13(Fri) 00:39z JD 1200bps PSK MailBox
20(Fri) 09:41z JD 9600bps FSK MailBox
27(Fri) 00:11z JA
July 4(Fri) 09:13z JD Digi-talker
8(Fri) 09:06z JA

* Mir Simplex Good News! Ham-astronaut Mike Foale, KB5UAC, who has just joined the MIR crew has been QSOed several times on passes over North America this last week. Sounds like he is going to be very active on 145.80 MHz.

* Space Shuttle Frequencies when in orbit.
Next SAREX mission scheduled for July 1997.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

RIGHT ON THERE..KQ4TX
I HAVE JUST STARTED TRYING TO RECIEVE SATELLITES AND HAVE HAD LUCK
RECEIVING THE THREE RS-10 AND RS-12 AND RS-15 USING TRAKSAT
PROGRAM..MY FIRST CONTACT WAS THE RS-10 THEN THE RS-12 FOLLOWED BUT I
JUST PUT IN NEW KEPS MAY 30 AND THEN I NOTICED NO CONTACT WITH THE RS-10
BUT I WAS RECEIVING THE RS-12..I NOTICED THE RS-10 IS NOW BEHIND THE RS-
12..IF YOU FIND OUT SOMETHING LET ME KNOW..YES I HAVE THE SAME PROBLEM AS
OF JUNE THE SECOND..
I THINK THE LAST TIME I HEARD IT WAS ON MAY THE 28TH...
I GLAD I LOOK THAT THIS PAGE..I WAS HAVING FUN FOLLOWING THOSES SAT...
I ONLY HAVE A 2 METER RIG AND A HF RIG..I'M USING A HORIZONTAL LOOP
8 FT OFF THE GROUND TO PICK UP THE SAT. AT HIGH ANGLES LIKE 20 DEGS AND
AN INVERTED VEE FOR THE LOW ANGLES..THERE IS NOT TO MUCH INFO ON ANTENNAS
TO USE EXCEPT THE ONES YOU CAN BUILD AND I LIKE THAT TO BUT EVERYONE SAYS
YOU CAN USE A GROUND PLANE OR A SMALL YAGI BUT THATS NOT THAT EASY NO 10
METERS..16 FT IS A BIG ANTENNA TO TRY TO ROTATE...
THANKS FOR THE INFO...

> amateur satellites transmitted 24h a day or do we have to transmitt a request
> string to the satellite? If it's so, we have a huge problemm :o) Well, we could

The good news for you is: Most sats are sending telemetry 24 h a day.
The bad news is: Most of theses sats are in low earth orbit and cannot
be received 24 h a day, rather only for about 20 min., and again after
abt. 60 - 100 min. (depends on the satellite / its orbit).

You should make you mind up about what kind of telemetry you want to
receive. Some sats send it in morse (CW), RTTY (radio teletype), AX.25
and so on. The morse telemetry, for example, can be received with a
normal receiver (capable of SSB/CW) and manually decoded, so you don't
need any hardware/computer... ;-) But the other telemetry types would do
so.

I am not doubting you... but I thought MIR was down.

maybe someone transmitted the packet signal mistakenly... (didn't try
to put -600 offset ?)

I also understand that 145.800 is only for the voice communication
(MIR).

Keplerian bulletins are transmitted twice weekly from W1AW.
The next scheduled transmission of these data will be Saturday,
June 7, 1997, at 2230z on Baudot and AMTOR.

1631. How do I request telemetry data??

Newsgroup: rec.radio.amateur.space
Date: 1997-06-03 00:00:00 UTC
From: moschler@ts.umu.se
Message-ID: <338f37a3.54041381@news.luth.se>
Source record: 18841

Hi!

I'm a student at the Swedish Space Engineering Campus, and right now I'm working on my degree project. It consist of making a lab in our satellite course... Now we have a small problem while recieving telemetry data from satllites. None of us have ever tried such thing, and that's why we think a lab on Ground Station Technology could be very useful. We are space engineers after all.. :o)

Now to my question, if anyone can answer it... Is the telemetry data from the amateur satellites transmitted 24h aday or do we have to send a request to the satellite? Then we will have a huge problem.... But so be it if it's so... :o)

Thanks for your help and have a nice summer, if you live on the north side of the globe....
Best wishes from
Krister Sundstroem, moschler@ts.umu.se
http://www.ts.umu.se/~moschler

1632. Re: How do I request telemetry data from amateur satellites?

> listen when other people are requesting it, but then we nedd a lot of luck..

Amateur satellites do transmit realtime telemetry. You don't need a special feature (license) to receive them. You must keep in mind that if you are unlicensed to transmit in amateur bands at your country, you cannot transmit to the satellite.

Telemetry received in realtime mode is mainly broadcast in CW (morse code) in analog satellites (russian series) and in packet radio, AX.25 for all digital satellites.

There are some telemetry files, those called WOD (whole orbit data) that should be requested for the groundstation, so this is the only feature that you will miss.

That's all Krister. Best wishes,

PS I'm instructing a couple of students to the use of a satellite groundstation here at the uni at this time too, :)

1633. NORAD Two-Line Orbital Element Sets (TLE006)

Newsgroup: rec.radio.amateur.space
Date: 1997-06-03 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5mvnol$cj@blackbird.afit.af.mil>
Source record: 18843

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

Seems Space Station MIR is back again.
I heard some kind of signal on 145.800 too.

I will try to update the information on this newsgroup.

sorry... I heard the signal too. I heard just a minute ago.

Please disregard last posting. I will try to update MIR information
on this newsgroup.

1637. IC-821H with KPC9612

Newsgroup: rec.radio.amateur.space
Date: 1997-06-04 00:00:00 UTC
From: vk6xlr@onaustralia.com.au
Message-ID: <33955d19.40803769@news.bigpond.com>
Source record: 18847
Cross-posted to: alt.ham-radio.packet,aus.radio.packet,rec.radio.amateur.space

I'm after the correct connections between the Icom IC821H and
Kantronics 9612. I want to operate 1200 & 9600 using the rear ACC
connector of the 821.

Thanks,
73's

Most of them 24h telemetry. The easiest to listen to is DO-17 at 145.845
(not sure about the freq, check http://www.amsat.org/) , it can be
heard with a talky!!
But I am not sure if it is working now... it crashes from time to time.

Cheers

The packet signals that I hear on 145.800 are constant, every few
minutes, are these from the Mir Space Station? And do they ever switch
to voice on the same freq.?

Can you recommend a mobile radio that will do (9600)
pacsat? I guess it has to be dual band, full duplex (separate
antennae connections seem like a good idea.

I believe it is from MIR station, but I am not sure. It may be from another satellite. Also, I don't know why MIR is now using 145.8 for packet communication.

It was posted only in the UK newsgroup. Therefore the date he put was
6th of Febuary '97 according to the standards of the newsgroup he posted
to. You shouldn't make excuses for these people.

Also, unless otherwise noted, it is reasonable to assume that the world
standard format will be used when posted in a world wide forum.

Take Usenet 101 and learn to read headers. First assignment, this header
will send this message to what groups?

Newsgroups: aus.radio.amateur.misc,uk.radio.amateur,rec.radio.amateur.space

> You shouldn't make excuses for these people.

OK. You don't know what you are saying and you have no excuse. OK?

> Also, unless otherwise noted, it is reasonable to assume that the world
> standard format will be used when posted in a world wide forum.

Golly Barry, do you know the world standard for people who assume things?

Now Barry, take a deep breath of air and read and see what you can learn.
Don't jump to conclusions and use the resources at hand. If you do you will
learn things like, posts can go to more than one newsgroup and, yes the MIr
is operational or even cool things like why the Mir uplink is different
than what it used to be.

Where is it "only" in UK group?

Newsgroups: aus.radio.amateur.misc,uk.radio.amateur,rec.radio.amateur.space

I see _three_ (3) groups: aus.*, uk.*, and r.r.a.s.

Since it was an "international" post, it follows "international" rules.

These are probably terrestrial APRS on 145.79 this is killing
MIR contacts. With so many APRS stations out there I think MIR will
have to change frequency to make it a viable 2m station.

1652. Sunspots and Global Climate - An Appology

Newsgroup: rec.radio.amateur.space
Date: 1997-06-05 00:00:00 UTC
From: Mike Flaugher N9LLX <flaugher@thepoint.net>
Message-ID: <01bc71c5$67b8edc0$dfa2f6ce@flaugher.thepoint.net>
Source record: 18862
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.shortwave,sci.astro,sci.astro.amateur,sci.environment,sci.geo.meteorology

Over the last few months I've tried to "stir the waters" a bit to provoke some discussion on sunspots and climate, a subject I got interested in as a ham radio operator years ago. Lots of people responded and sent me e-mail, but an article I read the other day by George Reid at http://www.agu.org/revgeophys/reid00.html finally put the while thing into perspective for me. I realized then that I'd been preaching to the choir, and also that it's likely to be SOME time before a real solar-Earth connection is developed.

It seems there are a lot of scientists, good scientists at places like NASA, NOAA, Yale, Harvard, etc. who have found strong correlations between solar change and climate/weather change on Earth. The correlations themselves are not in question. The problem is that they are ONLY correlations and we do not yet understand the mechanisms. Every explanation why a decline or lengthening of the sunspot cycles correlates with global cooling and increase and shortening of the cycles leads to global warming are theory. Proof according to the "scientific method" is needed, and proof promises to be hard to come by in this case. The need for research is great, but right now a lot of our efforts are being poured into anthropogenic (manmade) global warming.

My appologies to anyone and everyone I may have misunderstood. Like many, I have a real gut feeling that the sun is a major player in our weather patterns and long-term climate, but I now understand that we have to play by the rules. Until these things get proven out it's premature to tout solar power as the real biggie. Too bad because if we HAD this knowledge it would go a long way toward helping climatologists explain the warming and cooling anomalies we've been experiencing since sunspot cycle 22 started into decline.

Check out the neat "Graphical comparison of cylces 21, 22 and 23" at the DX Listener's Club page at http://dxlc.com/solar/. Also check out cycle 20 which "correlated" with the cooling patterns of the early 70's. Is another cycle 20 on the way? Hmmmm.

1655. Phasing Harness for Tonnas

Message-ID: <33967087.3B12@gtnet.gov.uk>
Source record: 18865

PHASING Harnesses / Power splitters question for TONNA antennas

I have a Tonna 9 element crossed beam for 144 MHz and would
like to make a phasing harnes for circular polarisation.

This particular antenna has its driven elements virtually next
to each other so is a straight power splitter with an extra
quarter wave inserted in one feed line the thing to use?

I also have a Tonna 19 element crossed for 435 MHz. However
this time the driven elements look as if they are already a
quarter wave apart. May I therefore use a straight power
splitter to obtain circular polarisation?

I would be very grateful for the answer.

Which is essentially what he did.

Why not take more note of the info he was imparting instead of
nitpicking about how he did it.

Mike

Oops. I lied in my previous e-mail. I also have the 9612
1200 bps pinout (the same on all Kantronics modems):

1 - TXAudio
2 - External Carrier Detect (leave disconnected)
3 - PTT
4 - RXAudio
5 - RXAudio
6 - Ground
7 - VARIES! Power voltage or reset pin or nothing
8 - Ground
9 - Ground

It just so happens our club station (K0MIC) acquired an
IC-821 and I've been messing with 9612s for weeks with
the Astronautics Dept (see my web page below).

Where did you get the 821 without the documentation?!

Looking into the radio from the back side, starting in the
lower left side, count clockwise around:

6
1 - 1200 bps RXAudio, DC coupled to IC109, a BU4053BCF
4 - 1200 bps TXAudio, AC coupled to either of two places,
software selectable from the IC-821 front panel.
2 - Ground
5
3 - PTT from the TNC
7
8 (center)

Sorry, that's all I know from memory. If you need more, I can
FAX you or USMail (send a SASE) of whatever 9612 docs or 821
docs you need.

1663. Mailloop: Mass E-Mailing Software

Newsgroup: rec.radio.amateur.space
Date: 1997-06-06 00:00:00 UTC
From: <>
Message-ID: <5n8mkm$fr8@newsfep1.sprintmail.com>
Source record: 18870

Mailloop v3.0 is an industrial strength bulk mailer.

Mailloop v3.0 is a bulk mailing program for the internet. It can take a single message and broadcast it to either a listing of e-mail addresses or to a listing of newsgroups. Creates custom newsgroup lists by filtering NNTP servers. Creates custom e-mail lists by extracting them from newsgroups. Can also extract e-mail addresses or newsgroup names from other protocols. Built-in NNTP, SMTP, POP, FTP, HTTP, EXEC, CGI, WHOIS and FINGER clients. Anti-cancelbot feature. Automatically processes remove requests. Includes extensive on-line help.
The most powerful bulk mailer available. Requires Windows 95 or NT 3.51+ and internet access.

The "Program" Mailloop is only available in English.

For more info goto: http://205.199.4.219

http://205.199.4.219

Using it is easy:

1) Create a message (http://205.199.4.219/editor.htm)
...by using the pull down menus or
...by using any editor

2) Create a newsgroups list (http://205.199.4.219/news3.htm)
...by filtering an NNTP server or
...by importing from any text file or
...by manually creating with any editor or
...by extracting from any FTP file or
...by extracting from any HTTP file

3) Create an e-mail list (http://205.199.4.219/em3.htm)
...by extracting from newsgroups or
...by importing from any text file or
...by manually creating with any editor or
...by extracting from a WHOIS response or
...by extracting from a fingering response or
...by extracting from a UNIX response or
...by extracting from any FTP file or
...by extracting from any HTTP file or

4) Broadcast the message
...to the e-mail list or (http://205.199.4.219/embc.htm)
...to the newsgroup list (http://205.199.4.219/ngbc.htm)

5) Then process the remove requests
...by using the mailbox processor (http://205.199.4.219/pop.htm)

6) If you want you can use the Newsletter Sever

In article <339575b8.1035006@news.dpnet.net> William Owens N3ZLL, wowens@dpnet.net writes:

>The packet signals that I hear on 145.800 are constant, every few >minutes, are these from the Mir Space Station? And do they ever switch >to voice on the same freq.?

Since Mir is in a low altitude orbit which circles the Earth every 90 minutes or so, it can only be over a given QTH for about 10 minutes MAX. (most passes are shorter in duration, your mileage may vary).

What you are hearing is certainly local terrestrial 2 meter packet contacts or beacons. 145.800 is the edge of the satellite band, and no terrestrial communications should occur at that frequency. Unfortunately should and does are different concepts.

Most likely you're hearing spillover from 145.79 Mhz. packet beacons. Try tuning your radio to 145.795 or 145.79. If the signal becomes louder and more distinct, you've found the source of your interference.

About six months ago all Mir 2 meter open operations (Voice QSOs and packet) were moved over to 145.200 uplink / 145.800 downlink. the same frequencies are used for both purposes, so you absolutely must listen first. If you hear an astronaut (or cosmonaut)'s voice - then DO NOT TRANSMIT PACKET!!!

The currently frequencies are compromises, and there is a lot of interference because of the lack of sensible two meter band plans, especially for packet. While it's fairly easy to find an open 2 meter frequency and still possible to find an open duplex 600 hz. spaced pair at any given location, there is no frequency which is consistenly available throughout the world.

Beside the QRM from 145.79 packet users (which really shouldn't have 'set up shop' on that frequency since that's part of the experimental portion of the band) the Mir cosmonauts are hearing the outputs of dozens of repeaters on their receive frequency 145.200. Your signal to Mir has to compete with all of those repeaters -- not just the ones in your particular area, but *all* of the 145.200 output repeaters within Mir's footprint!

Currently the hams around the world who are responsible for Mir's amateur radio activities are trying for a better set of frequencies which will satisfy more folks, and hopefully not interfere with existing bandplans too much.

I've compiled a FAQ about Mir's 2 meter amateur radio activities. The Unofficial Mir FAQ is available at on the worldwide web at -

http://www.phoenix.net/~mbordel/jscarc/mir/mirfaq.html

Based on your description I *think* I know what you're talking about, and what the confusion is. It's an arrow (generic name) antenna, not ARROW (brand name) antenna. The reason for it's particular name is that it is built out of aluminum archery arrows!

At last year's AMSAT Symposium in Tuscon somebody (I forgot who) presented a paper on a very portable AO-27 setup which consisted of a handheld radio, and a portable antenna setup -- perfect for the back of the car or field days.

The 'problem' with AO-27 is it has an extremely sensitive receiver (more often than not it picks up Spanish non-ham conversations (e.g. taxi drivers) from the Carribiean who are pirating the ham radio bands. These drivers are using 2 meter radios - and not concious of the fact that their transmissions are being received aboard a satellite, and retransmitted on the 70 cm. band to a much wider footprint than they could ever comprehend). But AO-27's transmitter is not as powerful. So to receive its signal you need a directional antenna, and a preamp.

Fortunately UHF Yagi antennas are fairly easy to build, and preamps are fairly cheap.

What this ham did was put everything together in a nice, easy to transport package which he could just toss in the back of his car, or carry while hiking, on field day, or whatever.

The paper is in the 1996 AMSAT meeting proceedings which is available from your lovely local Martha.

(Martha refers to AMSAT's 'mom', the only permanent AMSAT employee. She's the office manager, keeps track of how everything's done, and we all obey everything she tells us to do.)

Call Martha at 301-589-6062 and tell her that you'd like to purchase a copy of the 1996 Symposium papers. It's about $12 and well worth the cost!

Ron,

Arrow Antennas are in Cheyenne Wyoming they do sell direct but do not take credit cards so it is a bit cumbersome. I presented the antenna to AES and now they handle it. You can get it from any of their locations. I believe the model you are thinking of is the 144/436-10 it has 3 elements on 2 meters and 7 on 70cm. This antenna is an adaptation of a previous design. I did the redesign of the AO-27 antenna so I am a bit prejudiced.

It may well have been me you were in contact with as I do a great deal with the Arrow. I just got back from Alaska 10 grid squares and hundreds of contacts in 8 days on AO-27.

For all you potential AO-27 users there is one trick and one trick only to working this bird. You must hear it before you can work it!!! People are forever QRMing the bird by broadcasting when they are not hearing it. Take my word for it. If it is over the lower 48 it is in use. If you hear nothing the problem is yours. I have worked it from places where there is not the activity and you can still clearly detect the carrier. If you are on frequency and pointing correctly it is full quieting.

1673. Re: arrow antenna info request

Newsgroup: rec.radio.amateur.space
Date: 1997-06-07 00:00:00 UTC
From: Mark Fossum <n0nsv@amsat.org>
Message-ID: <3399A702.1D77@amsat.org>
Source record: 18733

Actually Phil, there is a company called "Arrow Antenna" that
manufactures just such an antenna. I have one myself that works
perfectly fine without any need for a preamp on AO-27.

The model number of the antenna is: 146/440-8 and is available directly
from them. It is a quality-built antenna made to assemble and
dis-assemble in a short amount of time.

Arrow Antenna
Mr. Allen Lowe - N0IMW

Cheyenne, WY 82007
Phone: 307-638-2369
Fax: 307-638-3521

The person that you are refering to is Chuck Duey (ki0ag@amsat.org).
He's written several helpful articles on portable operation with AO-27,
MIR and several other birds. Most recently, AMSAT Journal (Mar/Apr) on
page 10 & 11. Chuck is a "regular" on AO-27 and has been super-helpful
by sharing his portable experiences.

Hope this helps out!

1675. NAVSPASUR protoFAQ

Newsgroup: rec.radio.amateur.space
Date: 1997-06-08 00:00:00 UTC
From: thomsona@netcom.com
Message-ID: <thomsonaEBFLo7.H64@netcom.com>
Source record: 18735

Here's some material concerning NAVSPASUR I put together for a Web page. It isn't quite a NAVSPASUR FAQ, but maybe it will help if someone wants to write a real one. What follows is an ASCII export from a Word 6.0 .doc, so there may be some oddities.

****

US Naval Space Command Space Surveillance System

One of the lesser-known assets of the US Space Command's world-wide space surveillance system is the 217 MHz NAVSPASUR "fence" across the southern US. The following items from various sources (indicated at the end of each section) give some basic information about the system, its organizational setting, history and use.

NAVAL SPACE COMMAND

Mission

Headquartered at Dahlgren, Va., Naval Space Command began operations Oct. 1, 1983. Naval Space Command uses the medium of space and its potential to provide essential information and capabilities to shore and afloat naval forces by a variety of means:

+ Operating surveillance, navigation, communication, environmental, and information systems;

+ Advocating naval warfighting requirements in the joint arena; and

+ Advising, supporting, and assisting the naval services through training, and by developing space plans, programs, policies, concepts, and doctrine.

Overview

Naval Space Command's headquarters staff and operational element numbers approximately 350 Navy military and civilian personnel. Their component commands include the Naval Satellite Operations Center and the Fleet Surveillance Support Command.

Naval Space Command, a component of USSPACECOM, operates assigned space systems to provide surveillance and warning, and provides spacecraft telemetry and on-orbit engineering support. In addition, Naval Space Command serves as the Alternate Space

Control Center [AASC] for USSPACECOM's primary centers located at Cheyenne Mountain AS.

ASCC missions include operational direction of the entire global space surveillance network (SSN) for commander in chief, USSPACECOM (USCINCSPACE). The ASCC also detects, tracks, identifies, and catalogs all man-made objects in space and provides position information on these objects to about 1,000 customers. In addition, ASCC is charged with monitoring the space environment and informing owners and operators of U.S. and allied space systems of potential threats to their assets by continuous liaison with the systems' operations centers.

The heartbeat of Naval Space Command revolves around providing space support to day-to-day operations of the Fleet and Fleet Marine Forces worldwide, whether for routine deployments, exercises, or actions in response to a crisis situation. This space support to terrestrial and naval forces can be categorized across a broad spectrum of activities that encompass communications, surveillance and indication, and warning, intelligence, navigation, and remote sensing.

Surveillance:

A constant and vigilant surveillance of potentially hostile military threats is critical in preserving the operational effectiveness of our armed forces around the world. Naval Space Command manages two distinct surveillance efforts in support of Fleet and Fleet Marine Forces: tracking satellites in orbit and monitoring over-the-horizon threats from sea and air forces.

First, Naval Space Command operates a surveillance network of nine field stations located across the southern U.S. Three transmitter sites in the network are located at Jordan Lake, Ala., Lake Kickapoo, Texas, and Gila River, Ariz. Six receiver sites are located at Tattnall, Ga., Hawkinsville, Ga., Silver Lake, Miss., Red River, Ark., Elephant Butte, N.M., and San Diego, Calif.

These surveillance stations produce a "fence" of electromagnetic energy that can detect objects out to an effective range of 15,000 nautical miles.

Over one million satellite detections, or observations, are collected by this surveillance network each month. Data gathered is transmitted to a computer center at Naval Space Command headquarters in Dahlgren, where it is used to constantly update a data base of spacecraft orbital elements. This information is reported to Fleet and Fleet Marine Forces to alert them when particular satellites of interest are overhead. The command also maintains a catalog of all earth-orbiting satellites and supports USSPACECOM as part of the nation's worldwide Space Surveillance

Network...

Intelligence:

Naval Space Command provides space intelligence support to deployed naval forces through an initiative dubbed "Chambered Round." The Chambered Round product is a message that provides deployed naval forces with tactical assessments of hostile space capabilities and specific reactions to their operations. This knowledge assists Fleet and Fleet Marine Force tactical units in reducing their vulnerability to space reconnaissance efforts...

History

The Minitrack system that was developed in the late 1950s for the NRL Vanguard Satellite Program used the signals emitted by Sputnik and later satellites to determine their positions and orbits. This pioneering tracking system led to the concept of tracking nonradiating, or noncooperative, satellites by signals reflected off them. An experiment using a transmitter in Fort Monmoth, New Jersey and Minitrack receivers demonstrated the concept, and from this experiment a larger and more elaborate system was developed by NRL. This system became known as the Naval Space Surveillance System (NAVSPASUR), which was commissioned as an operational command in 1961. Although the operational command is now integrated with the Naval Space Command, the sensor system is still in active use as a major component of the North American Aerospace Defense Command (NORAD), and has become the alternate Space Defense Computational Facility.

The system concept of NAVSPASUR is that of a continuous wave (CW) multistatic radar. A high-powered transmitter generates a large fan beam of energy, commonly called the "fence," which reflects signals from an orbiting object back to separate receiving stations. These receiving stations use large arrays of antennas as an interferometer to determine the angle and angle rates of arrival from the reflected signals. By observing the target satellite from several stations, the position can be determined; using multiple penetrations, the orbit can be inferred. This rather simple concept led to a highly reliable system that could detect virtually any satellite coming within the transmitter's illuminated field.

Even though the NAVSPASUR system performs the functions of detection and satellite orbit determination very well, there are limitations on coverage and time required to determine an orbit

with the CW fence approach. NRL experiments into methods of improving the system included the idea of transmitting ranging signals as well as the primary VW signal, so that not only could the angles at the receiving sites be measured, but the distance to the target satellite as well (*). An experimental parallel fence with a ranging capability was begun in South Texas in 1960 to demonstrate system performance and early orbit determination. The three stations built in South Texas were a transmitter and two receiving stations...

[For Timation satellite navigation experiments,] Two ground stations were initially used, at NRL [in Washington, D.C.] and the South Texas space surveillance site at Raymondville, Texas (**)

A History of Satellite Navigation by Bradford W. Parkinson, Thomas Stansell, Ronald Beard and Konstantine Gromov Navigation: Journal of the Institute of Navigation (ISSN 0028-1522) Vol.42, No.1; Spring 1995 Special Issue pp. 109-164

SPASUR

The U.S. Navy Spasur (Space Surveillance) System (*, **) is a CW fence radar consisting of a chain of stations located on an east-west great-circle path across the southern United States. Three transmitter stations (one high-powered in the center of the chain and two low-powered on the ends for gap filling) and six receiving stations are used in the network. The system originally operated at 108 MHz [the Minitrack frequency] but was converted to 216 MHz in 1965, along with upgrading and expansion of the original experimental network.

The high-power transmitter consists of two 500-kW transmitters operating in parallel and feeding a north-south linear array 10,560 feet long.

The receiving stations are equipped with a number of linear antenna arrays for phase sensing and alerting. The north-south length of the phase-sensing antennas at two of the sites is 2,400 ft, and the east-west baseline (which sets the angular-accuracy limit) is 1,200ft or approximately 260 wavelengths. Angular measurements from the various receiving sites are transmitted to a central computer facility located at Dahlgren, Va.

Control and Computation [General requirements for CW fence radars]

Since angle measurements from at least two receiver stations are needed to determine position and to eliminate false alarms due to meteors or aircraft, the outputs must be collected at a central point and processed• One detection (encoded in digital form) requires a total of less than 100 bits. One telephone line from a receiving station to a central control could easily handle 70 or more detections per minute, a rate much higher than would be expected from any foreseeable space population.

The computation requirements for correlating the various receiver angle measurements and providing a detection report are relatively modest. Even [if orbital elements for new detections must be generated and correlated with objects in a catalog].. these computing requirements are well within the capability of a computer of the size of the IBM 7090 for space populations of a few thousand objects.

Satellite Surveillance Radar
Charles S. Lerch, Jr.
Chapter 32 of
Radar Handbook
Merrill I. Skolnik, editor
McGraw-Hill, 1970
Library of Congress Catalog Number 69-13615

IV. NAVSPACECOM FENCE

A. Dedicated low-earth orbit (LEO) detection sensor; does not track.
B. Unique multi-static radar interferometer sensor system consisting of three transmitters and six receivers located across the US at 33N.
1. Covers 5000 nm (15% of earth's circumference).
2. Measures frequency, time and angle of detection
3. Transmits on 216.98 MHz:
Kickapoo Lake 767 kW
Gila River 40 kW
Jordan Lake 40 kW

C. Detection capabilities:
1. 0.1 m2 RCS @ 2,000 nm
2. 1.0 m2 RCS @ 10,000 nm
3. 200 m accuracy RMS

D. "Standing radar energy fence" is excellent sensor for break-ups and maneuvers.

E. Performance:
1. Detects 70% of catalog objects (100% of LEO objects with I > 33 deg).
2. Several (approx. 150) Space Surveillance Catalog objects only tracked by Fence.
3. Approx. 60K observations/day => 1.7M/month
12K triangulated obs/day => 360K/month
Provides approx. 21% of all SCC LEO observations.
4. Break-ups: > 48 first detects in last 10 yrs
Piece separations: > 59 first detects in last 6 yrs
Often the first sensor to detect a maneuver.
5. Fence has 99.9% operationally ready rate.

excerpt from

NAVSPACECOM / N32 Brief:
Naval Space Operations Center
25 June 1994

Lake Kickapoo Space Surveillance Station Archer City, Texas

The Lake Kickapoo Field Station, located on 180 acres of government owned land approximately thirty miles southwest of Wichita Falls, TX in Archer County is the primary Naval Space Command transmitter. It creates a fan of energy, "the fence", that is narrow in the north-south direction and extends from coast to coast over the southern United States. The Station is aligned on a great circle path inclined to the equator at approximately 33 degrees inclination. In conjunction with eight other field stations it forms the NAVSPACECOM satellite sensor system. Two small transmitters supplement the Lake Kickapoo generated "fence" and six receiver stations collect energy reflected from satellites crossing the beam. Lake Kickapoo is the largest continuous wave (CW) transmitter in the world with an average radiated power of 766.8 KW and operates at a frequency of 216.98 MHz.

The antenna is a single two mile long linear dipole array. The Station was built in two phases that resulted in halves once known as the North Site and South Site. Each had 9 antenna bays that were aligned end to end to form the full antenna array. Now the 18 bays have central control from the original South Site and 2556 dipole elements form the total antenna array.

The operation and maintenance of the Field Station is provided under contract by Rick Montoya Services Incorporated of McLean, VA. The Station is manned solely by contract personnel with only the Center at Dahlgren, VA utilizing civil service and military personnel.

The Lake Kickapoo Station is manned during the daytime work week by a Station Manager, Technical Supervisor, Senior Technician, two Shift Technicians, a Shift Assistant, two Maintenance Mechanics, a Maintenance Assistant and a Part-time Secretary. At other times, two Electronic Technicians and one Shift Assistant are on duty at the Station.

Total annual cost to operate this station is approximately $1.8M with $800K of this being the cost of electricity.

A new phase reference system using infrared fiber optics replaced the aged RF coaxial system in May 1993. This reference system monitors and maintains phase integrity for the 2 mile long Kickapoo antenna. Recent improvements at the Kickapoo site include a system controller upgrade to be completed by mid 1996.

NAVSPACECOM fact sheet dated 23 January 1996

[RECEIVER] ANTENNA VERIFICATION TESTING

The Dahlgren Division of the Naval Surface Warfare Center, Dahlgren, Va is seeking sources on a competitive basis for an antenna verification testing and installation of replaced/ installed spare components at the NAVSPACECOM Elephant Butte, New Mexico Field Station. These antennas are used in a one-of-a-kind earth satellite signal detection receiver. This receiver is in use at six NAVSPACOM Field Station. The antennas are constructed of Dipole Elements (144 per 600 foot array), coaxial transmission line combiners, tees, elbows, expansion joints and 7/8 inch, 3-1/8 inch transmission lines. The contractor will test fifty 600 foot arrays at the Elephant Butte, NMNAVSPACECOM Receiver Station...

Spectrum Allocation

Footnote US239 [not available] provides for protection of the Navy's Space Surveillance (SPASUR) system operating in the southern part of the United States in the frequency band 216.88-217.08 MHz.[EN416] The Navy has modernized its SPASUR system, and has operated since 1965. The NAVSPASUR system provides data on satellites and other space objects as they pass over the continental United States. The system uses three transmitter sites and five receiver sites positioned on a great circle in the southern part of the United States. It is a bistatic system, locating objects by triangulation.[EN417]

[EN]417. A.R. Francoeur, Naval Space Surveillance System (NAVSPASUR) Solid State Transmitter Modernization, IEEE National Radar Conference, Institute of Electrical and Electronics Engineers, at 147 (1989).

First of all, its now called NAVSPACECOM fence (since late 1993)
but we still call it the SPASUR fence (grin)

A person from Florida (the name escapes me) had used the Lake
Kickapoo transmitter for following satellites. Again, I'll have
to look up the name at work on Monday.

> The article mentions transmitters in Texas (Kickapoo Lake I

The Fence has 3 frequencies: Gila River (Phoenix) Arizona -
216.97 MHz Lake Kickapoo (Archer City) Texas - 216.98 MHz Jordan
Lake (Wetumpka) Alabama - 216.99 MHz

receivers throughout the southern US (too many to mention here)

> I am interested in detecting satellites crossing the fence and
>would appreciate any data available on the subject. If there is
>enough interest I can try to put together a summary or possibly a FAQ
>if one doesn't already exist. Thanks in advance for your assistance..

Well, I'm in development of a web page (one of these days they'll
put it on line!)

If you want more details, let me know. I work for the fence on a
daily basis. E-mail me at the address below.

70cm actually. PAVE PAWS is an early warning radar. It is frequency
agile and uses a steered phased array at very high power. It makes
a raucous buzzing noise. The one in Georgia (Robbins AFB) is inactive,
and likely to stay that way. The high ERP was determined to be actively
dangerous to nearby aircraft, like the SAC B-52 bombers taking off and
landing at Robbins. The other sites may or may not still be in use.

NAVSPASUR is a different animal. It is a CW signal (not Morse, a
real continuos carrier) on 216.983 MHz aimed straight up in a fan
pattern aligned with a line of latitude, IE east-west. There are
three transmission sites, Jordan Lake AL, lat 32.659 long 86.264,
Kickapoo Lake TX, lat 33.558 long 98.7367, and Gila River AZ,
lat 33.11 long 112.03.

Phase slaved interferometers at remote receive sites give 3D position,
and doppler measurements give range rate. With this information, an
orbit for the object can be calculated. Because of the way the sites
are staggered longitudinally, any satellite with an inclination of
33 degrees or more will show up on successive orbits through 2 or more
of the fences. That allows the initial orbital element set to be
refined.

You can use these signals to check and correct satellite element
sets. Use your satellite prediction program to find out the time
the satellite should cross one of these latitudes and be in a
mutual footprint with your station and one of these sites, aim

your antennas at the predicted position, and measure the actual AOS, LOS, and doppler of the reflected signal. The offset of this actual data from the predicted data can then be used to correct the element set.

Of course if the satellite has an active beacon, and you know its frequency precisely, you can do the same thing without resort to NAVSPASUR. It is most useful for locating passive targets.

Radio Meteor Observation Bulletin No. 46 June 1997

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 deg (= E),
elev 27 deg
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

May 1997 eta Aquarids

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Notes:
. observed eta Aquarids maximum on May 5, 5h UT. Radiant rises at 1h30 UT
and sets at 13h30 UT. Fairly constant forward scatter conditions for
this setup between 4h - 7h UT.
. local time = UT + 2 hours.

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 30 deg
Antenna amplifier: 10 dB gain
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightnings, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic E.

Notes:
. eta Aquarids maximum on May 5.
. towards the end of the month: thunderstorms and temperature inversions hampering the observations.
. local time = UT + 2 hours.

Pierre De Groote

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 3 element Yagi, direction south
Receiver: AR-8000 at 53.7600 MHz, SSB mode.
Transmitter: 30 kW TV video carrier in Arezzo, Italy, distance 400 km, direction south. Several high mountains in transmitter direction prevent direct and tropospheric reception. This transmitter is available for 24 hours.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record the audio signal. 20 channels of 2 Hz width are used for meteor identification, pictures with interference are manually rejected.
More details see <http://www.net4you.co.at/user/kuneth/info.html>

All counts below are corrected for a full hour observing time. If the availability of the data is 20-40 minutes, a dot is shown after the value. Data for less than 20 minutes observing time are not shown here.

Meteor counts of reflections longer than 6.5 seconds: assumed to be overdense.

| May 1997

Notes:
. summary for May 1997: a lot of activity in the morning hours for
the whole month. Started recording on May 6. There was meteor shower
activity from May 6-9 (eta Aquarids) and from May 15-19.

. blank value means either few or no data available, interference,
data loss due to hard disk failure (!) or offline during thunderstorms.

. local time conversion: 2 hours ahead of UT (04h00 UTC is 06h00 local)

Werfried Kuneth

Observer: Chikara Shimoda
Location: Asahi, Nagano, Japan (137 51' E, 36 07' N)
Frequency: 81.4 MHz
Transmitter Location: FM-Japan 81.3 MHz, 10 kW, distance 180 km
Antenna: 5 element Yagi directed to the zenith.
Receiver: AM-FM Tuner (TRIO KT-1100)
Observing method: Meteor echoes output from center-tuning meter were
recorded on a pen-recorder chart.

Chikara Shimoda

Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 87.360 MHz
Receiver: Salora SRP-22 modified, narrow band FM (B=15 kHz).
detected signal level >-122 dBm.
FM detection, no pulse noise rejection required.
Antenna: 2 element Yagi with 4 dBd gain to SW, azimuth: 45 deg (SW)
Data sampling system: threshold triggering, sampling rate 64 ms.
Computer logs total hourly elapsed reflection time, number of
threshold crossings for the hour, the longest time the signal was
continuously above detection level for the hour.
Data stored in the Compact MS-Soft format. Software for viewing available
from FTP.FUNET.FI pub/ham/vhf-work/mssoft43.zip (420 K, new version!)

Counts in one hour intervals starting at:

Eta Aquarids

Ilkka Yrjola / via M. De Meyere

2. ERRATUM

In RMOB9704.TXT, observations of M. De Meyere: read April 1997 instead
of March 1997.

3. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

Congrats Fred...You are a lucky one..I have been tyring to
connect for months now.. I live in California USA on the west coast
There are to many alligator stations here. They forget that the
mailbox on MIR is for the CREW of MIR. Not for the sending of
mail to ALL or WORLD just R0MIR...Questions, Comments, Helps
NOT KEPS, CQ's, or anything directed at a Terestriall station...
I have a text that will help...it follows

73...ken...sk

Please notify listserv@amsat.org if you would like to subscribe, un-subscribe or change your Internet address for any of the AMSAT lists. You may request to be added or deleted from the following lists: AMSAT-BB, ANS, SAREX, or KEPS. Please *do not* send such requests to the lists themselves.

SB SAT @ AMSAT $ANS-159.01
STS-94 SAREX MISSION PT.1

HR AMSAT NEWS SERVICE BULLETIN 159.01 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 08, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-159.01

STS-94 Nominal orbital data is now available on the AMSAT Web Page. The time-independent State Vector and the Keplerian elements corresponding to the scheduled launch time of 01-JUL-97 / 18:37 UTC are available at:

http://www.amsat.org/amsat/sarex/orbit.html

The full set of nominal state vectors and mission profile schedule is also available on the AMSAT Web page at:

http://www.amsat.org/amsat/sarex/vectors.html

As in the past, updates will be made to the AMSAT Web page using actual orbital data during the mission E-Mail updates are no longer made to the SAREX mailing list during the mission. These updates were discontinued when NASA Spacelink began sponsoring a mailing list called *STSTLE* for this specific purpose. Subscriptions to STSTLE are available on request. To subscribe send an E-Mail message to the following address:

listproc@spacelink.msfc.nasa.gov

The text of the mail message should be as follows:
subscribe STSTLE FirstName LastName

Where "FirstName" and "LastName" provide the list manager with your name.

Those considering subscribing to STSTLE should be cautioned that the list typically provides three to four updates per day on the Shuttle (and also for any satellites deployed by the Shuttle). The frequency of updates ensures current data for several NASA agencies that subscribe to this mailing list. If this many updates are undesirable, you should get your Keplerian elements from a different source.

Ken Ernandes, N2WWD, created one additional source for Shuttle orbital data. In some high-interest SAREX missions, Ken had received E-Mail

messages from individuals having difficulty accessing the AMSAT Shuttle Orbital Data Web page. These individuals did not want to subscribe to STSTLE because of the frequency of updates. Therefore, Ken provides a backup source of a current STSTLE update message on his personal Web page. This page may be accessed at:

http://www.mindspring.com/~n2wwd

Because of the workload in providing updates to both the AMSAT Web page and

the STSTLE mailing list, Ken's personal Web page is sometimes only updated with the STSTLE message at ~13:00 UTC and ~20:00 UTC during the missions. Thus, the AMSAT page is the primary data source on the World Wide Web.

[ANS thanks Ken Ernandes, N2WWD, for this information about STS-94.]

STS-94 SAREX MISSION PT.2

HR AMSAT NEWS SERVICE BULLETIN 159.02 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 08, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-159.02

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (titles and Amateur Radio call signs):
James D. Halsell, Commander, KC5RNI
Susan L. Still, Pilot
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF
Michael L. Gerhardt, Mission Specialist
Roger Crouch, Payload Specialist
Greg Linteris, Payload Specialist

The SAREX Working Group has designated the following frequencies during this mission.

FM Voice Downlink: (Worldwide) 145.55 MHz
FM Voice Uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
FM Voice Uplink: (Europe only) 144.70, 144.75, and 144.80 MHz
FM Packet Downlink: 145.55 MHz
FM Packet Uplink: 144.49 MHz

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the "luck of the draw." Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs: KC5RNI, KC5BTK and KC5FVF
FM packet call sign: W5RRR-1

QSL VIA: Send reports and QSLs to ARRL EAD, STS-94 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-83, date, time in UTC, frequency and mode (FM, voice or packet). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card.

[ANS thanks the ARRL for this information.]

/EX

SB SAT @ AMSAT $ANS-159.03
RS NEWS FROM G3IOR

HR AMSAT NEWS SERVICE BULLETIN 159.03 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 08, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-159.03

RS-10 still silent:
RS-10's beacon, ROBOT and transponder remain silent whilst designer and builder Andy Papkov carries out experimental work with the satellite from the RS3A command station. Leonid Labutin UA3CR reports that it is hoped that RS-10 will be active again soon, long before it's tenth birthday.

Special Event Station:
From 21st June until 29th June a group of keen RS enthusiasts consisting of G4CUO, G4ZHG, G6HMS, G0MKA, G7MUB, G8DYK and G0MKA will be celebrating the ten years of faultless operation provided by the Russian RS-10 satellite. They will be active with the callsign GB0RAS on all modes on each and every pass of RS-10, RS-12, RS-15 and the Japanese FUJI satellites

also. A serial number will be given for all QSO's on each satellite, and a very special QSL card will be sent to each station contacted or SWL report received.

RS-14/AO-21 Resurrection?
Rumors are circulating that a strong possibility exists that the commanding problems with OSCAR-21 alias RS-14 may soon be resolved. It is not impossible that this highly popular but long silent satellite may re-appear shortly.

RS-15 Problems:
Where six months back RS-15 was self-switching all it's systems off soon after entering eclipse, then two months ago continuing to function well into shadow, RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight. This effect is evidenced

whenever high power uplink stations come up on the transponder. The satellite normally recovers within a few seconds, only to switch off again when the QRO operator(s) re-appear. The lesson to be learned is for users to improve their downlink reception, and NOT to increase their uplink power in order to hear (just) themselves. 100w ERP is more than enough to produce an adequate signal from RS-15 on the single proviso that other users do not run more than this.

RS-16 progress:
Andy Mirinov RK3KPK reports that RS-16 "now has a new voice on CW"
All reports received by Andy of this latest Russian satellite will be answered by him with a QSL card.

[ANS thanks Pat, G3IOR, and Andy Mirinov, RK3KPK, for this news about the RS satellites.]

SB SAT @ AMSAT $ANS-159.04
UO-22 INFO

HR AMSAT NEWS SERVICE BULLETIN 159.04 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 08, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-159.04
A recent problem with UO-22 seems to be related to the software changes that were made last week prior to the last flight software reload. During the last pass over Surrey on Saturday morning, June 7th, Chris Jackson, G7UPN / ZL2TPO , closed the spacecraft store and forward communications system for general use to allow him to diagnose the problem. Chris reports

he will make changes to the spacecraft software and a reload of the communications system will be carried out, as soon as practical.
A complete software reload should not be required and it will be a simple case of reloading the communications task only. This will only take a couple of minutes assuming a good uplink and European operators are asked NOT to transmit to the spacecraft until it is open for use.

[ANS thanks Chris Jackson, G7UPN / ZL2TPO, Groundstation and Operations Manager. Surrey Satellite Technology Ltd, University of Surrey, for this update.]

/EX

SB SAT @ AMSAT $ANS-159.05
WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 159.05 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 08, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-159.05

MIR:
(Uplink 145.2 MHz FM Downlink 145.8 MHz FM)

Note, the above split is used for both packet and voice operation.
ANS has received many reports that both the voice and packet
stations are operating on 145.800 MHz simplex. Also note that
the MIR packet station, R0MIR-1, is operational.
[ANS thanks Claudio Ariotti, IK1SLD, for this report.]
Greg, KO6TH, told ANS that the MIR packet station, R0MIR-1, may be
using 145.800 SIMPLEX, not the minus offset.
Greg did manage to digipeat through R0MIR to KJ7UI,
and exchanged a quick greeting. Gene, N7CKA reports he worked MIR,
on packet and voice, on simplex twice June 8th. He made a contact at
0652 UTC and again on the next pass at 0828 UTC had a contact with KB5UAC.

SAFEX, MIR 70cm Repeater
(Uplink 435.750 MHz FM, Downlink 437.950 MHz FM,
Subaudible tone 141.3 Hz)
Francisco Costa, CT1EAT, reports he is
happy to announce you that
MIR's UHF Voice Repeater is again on!
CT1EAT just work ON6GP on the June 7th pass over Europe,
between 1952-2001 UTC..
[ANS thanks Francisco Costa, CT1EAT, for this report.]

RS-10
(Uplink 145.865-145.905 MHz CW/SSB, Downlink 29.36-29.4 MHz CW/SSB)
RS-10 Still silent.
RS3A needs some SWL reports of RS-10.
What time you heard RS-10, and also the date.
Send info via packet to Andy, .RS3A.
Packet: RK3KPK@RA3KP.MSK.RUS.EU

RS-12
(Uplink 21.21-21.25 MHz CW/SSB, Downlink 29.41-29.45 MHz or
145.91-145.95 Mhz CW/SSB)
Signals on RS-12 in North America during May and June (almost
exclusively daylight passes) are weakened by increased ionospheric
activity which is keeping 15m active during the daylight hours.
This makes it especially important for the 'old timers' to warn the
newcomers on RS-12 to set their uplink frequency and leave it alone to
prevent sweeping across the 15m band and QRM-ing the terrestrial QSOs
in progress
[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Be aware that RS-15 has battery charging problems. When the satellite is
in the dark it has low output power..
[ANS thanks Geoff Perry for this report.]
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
RS-16's 435.504 MHz beacon is active.

The transponder and the 10 meter beacons are not
active at this time.
Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 , 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W
[ANS thanks Chuck Duey, KI0AG, for this report.]

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9
MHz CW/USB)
Operating normally. Strong downlink signal. Very busy
during passes over North America. Please remember to adjust the
higher frequency for doppler when the bird is in analog, JA, mode.
This means adjust the 70 cm frequency, the downlink, for doppler
shift. You do not have to adjust the 2 meter frequency, the uplink,
for doppler.

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK.)
KO-23 operating normally. Ronald Osborne, an
Amsat Area Coordinator, reports copying KO-23 from 01:04-01:17Z, 01 JUN.
There is a message "KO-23 will be reset between June 4 and June 6".
[ANS thanks Ronald Osborne, N2OGB, for this report.]

KO-25
(Uplink 145.980 MHz FM, Downlink 436.5 MHz FM,
9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27
(Uplink 145.85 MHz FM, Downlink:
436.792 MHz FM (As of April 1, 1997)
Operating normally.
AO-27 (1-Jun-1997- 10:58 UTC Orbit-19182)
The satellite is working normally over North America.
and Europe.
Current AO-27 schedule information can be found at
www.umbra.com

Tepr 4 = 32 counts 16 Minutes
Tepr 5 = 66 counts 18 Minutes
The Transmitter xtal is changing with time. From the first day AO-27
was in orbit the Transmit Frequency has been shifting lower. Many

have not checked the zero doppler frequency closely enough to see that it
is dropping. Every few months Michael Wyrick, N4USI, has to change
a setting that moves the freq. a KHz or so up in freq. This setting only
has a range of about 7 KHz total. This means that after a while Michael
can't compensate for the change and has to reset the setting back to zero.
This causes the freq. to drop about 7 KHz when he does this. There is not
a way around this and the Tx freq. will continue to drop as the xtal ages.

The satellite is coming up on the end of range for this setting and in
several months the freq. will seem to drop again. If N4USI had not put the

correction hardware on-board, you would see a continuous shift in tx
frequency. AO-27 Will turn on Every pass 16 Minutes after entering the sun
and will stay on for 18 minutes. This corrects the early shut off that
has been going on for the passed few weeks.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update.]

FO-29
Voice/CW
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Digital
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600 baud
BPSK)
Please remember to adjust the
higher frequency for doppler when the bird is in analog, JA, mode.
This means adjust the 70 cm frequency, the downlink, for doppler
shift. You do not have to adjust the 2 meter frequency, the uplink,
for doppler.

The latest FO-29 Schedule can be found at.

SB SAT @ AMSAT $ANS-159.06
WEEKLY SATELLITE REPORT PT 2

HR AMSAT NEWS SERVICE BULLETIN 159.06 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 08, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-159.06

AO-10
(Uplink 435.030-435.18 MHz CW/LSB, Downlink 145.975-145.825 MHz
CW/USB)
Mike West ,WL7BQM, reports on

June 4th at 22:33 UTC phases 184, alt of 29500 km, range at 35000
km (ALASKA) signal was strong when sun was on solar panels.

Mike, N1JEZ, made a quick check of AO-10 tonight June 3rd at 0122 UTC.
The bird was 17,000 km away from him. He heard the beacon. Very Weak,
maybe a slight bit of FM'ing, but very small change. Mike did a quick voice

check, and did hear his downlink. No perceptible FM'ing on his voice.

OSCAR-11
(Downlink 145.825 MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz..)
Operating normally.
Telemetry nominal. The battery voltage has recently improved to
around 13.9 volts, and the internal temperatures have continued to
fall, due to solar eclipses. The battery temperature is now 4
degrees C, or 18 degree below the full sunlight condition.

The operating schedule is unchanged.

UO-22:
(Uplink: 145.9 or 145.975 MHz FM. Downlink 435.120 MHz FM
9600 Baud FSK.)
A problem with UO-22 seems to be related to the software changes that
were made last week prior to the last flight software reload. During
the last pass over Surrey on Saturday morning, June 7th, Chris Jackson
closed the spacecraft store and forward communications system for general
use to allow him to diagnose the problem..
[ANS thanks Chris Jackson, G7UPN / ZL2TPO,
Groundstation and Operations Manager, for this report.]

IO-26 (ITAMSAT)
(Uplink 145.875, 145.9, 145.925, 145.95MHz FM, Downlink 435.822 MHz SSB,
1200 Baud PSK.)
IO-26 controllers report that the spacecraft is now in IHT mode. The new

ROBOT software is under currently undergoing tests. The beacon reports
that the digipeater is OFF and that the ROBOT is undergoing tests.
Controllers ask that groundstations please do not transmit on any of
the satellite's uplink frequencies for the time being.
[ANS thanks Daniele Piercarlo, IK2XRO, ITMSAT Command Station for this
report.]

They originate at US SpaceCommmand. You can't go there. They are
furnished to NASA OIG (orbital info group). You can go there.

The URL can be found at VSOHP below.

Virtually everyone else gets them from OIG also, so it doesn't matter
whether you get them from OIG or any other site.

>antennae connections seem like a good idea.

Mobile dual-band FM radio's have inadequate transmitters for 9600 baud,
even when the manufacturer says they are "9k6 ready". Your uplink
performance will always be marginal.

For 9k6 pacsat operation, you also have to check it has reasonably small
steps (preferably 1 KHz, 2.5 KHz will be acceptable, 5 KHz will be marginal,
anything above will be useless), and that it be computer-controllable
(CAT, CI-V etc).

Yaesu used to include CAT even on their mobile equipment, I don't know if
they still do. I have used an FT-712RH as a receiver. It worked
reasonably well with a steerable 2x15 el crossed yagi and a preamp. The
2m version FT-212RH was completely unsuitable as a transmitter.

I am sorry but that would not be possible. The circuit uses special PALs
and I am not willing to release the code. Also the main firmware is
copyrighted.
You might ask if anyone has one for sale. Try the amsat-bb as well as this
newsgroup.

Looking at the box with the coax connector at the bottom, the feedline on the left is the one wired through the relay. The feedline on the right is a direct connection.

I have mine apart for cleaning and repair at this time. Fortunately, my relay is okay but the relay on my KLM2M14C was not and I removed it. I had to make my own phasing lines of 75 ohm coax. This is not so easy to do with the 435 Mhz antenna because the lengths are extremely critical.

Good luck,

Jim K7YO

SB NEWS @ AMSAT $SPC0609
* SpaceNews 09-Jun-97 *

BID: $SPC0609

=========
SpaceNews
=========

MONDAY JUNE 9, 1997

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It
is published every week and is made available for non-commercial use.

* AO-27 NEWS *
==============
The 70-cm downlink signal from AO-27 is slowly drifting lower in frequency
with time. This drift is due to the natural aging of the transmitter crystal.
Controllers can adjust the downlink frequency slightly to compensate for the
drift, however the frequency change that has occurred to date greater than
the amount that can be compensated for by controllers. Users are asked to
be aware of this and take this into consideration when monitoring the AO-27
downlink (which is currently 436.792 MHz).

[Info via N4USI]

* MIR NEWS *
============
The Mir space station is currently active on both packet radio and FM voice.
Uplink is on 145.200 MHz. Downlink is on 145.800 MHz. PP8KWA in Amazonas,
Brazil downloaded the following list of messages from the Mir personal
message system on-board the space station:

Msg # Stat Date Time To From @ BBS Subject

Mir can also be heard on communicating with ground control on 143.625 MHz FM. Ron Parise, WA4SIR, reports that Mir communicates with groundstations at the NASA Wallops Flight Facility at Wallops Island, Virginia, and the Dryden Flight Research Center at Edwards Air Force Base, California. A third site at the White Sands Missle Range in New Mexico is expected to become operational within the next few weeks, and a fourth US site is currently under consideration.

Keep an eye out for Mir as it is making visible passes after sunset. In some cases, Mir is visible on every evening pass, particularly when the passes occur in the northern sky.

* RS-10 NEWS *
==============
Users of RS-10 are asked to monitor the satellite's downlinks as it may return to the air shortly. The reason for its dissappearance remains a mystery, but may have something to do with experiments carried out by spacecraft controllers. Leonid Labutin, UA3CR, remains confident that the satellite will return to the air and be operational before its 10th anniversary is celebrated next month.

1688. Amateur Satellite Projects Wanted For "Satellite Times"

Newsgroup: rec.radio.amateur.space
Date: 1997-06-09 00:00:00 UTC
From: magliaco@email.njin.net
Message-ID: <st0609.1997@grove.net>
Source record: 18748
Cross-posted to:
rec.radio.amateur.space,rec.radio.amateur.homebrew,sci.electronics.design,rec.radio.amateur.antenna,rec.radio.amateur.misc

"Satellite Times" magazine is interested in publishing construction projects (antenna designs, frequency downconverters, transverters, amplifiers, modems, etc.) related to Amateur Communication Satellites.

"Satellite Times" is a bi-monthly publication that covers low-earth orbit to geostationary orbit and beyond. If you have an idea for a feature article, please contact "Satellite Times" editor-in-chief Larry Van Horn at:

steditor@grove.net

For more information on "Satellite Times" magazine, feel free to visit the "Satellite Times" home page at:

http://www.grove.net/hmpgst.html

Thanks!

73, de John, KD2BD
Columnist, "Satellite Times" magazine

Philip Chien, KC4YER@amsat.org writes:

>At last year's AMSAT Symposium in Tuscon somebody (I forgot who)
>presented a paper on a very portable AO-27 setup which consisted of a
>handheld radio, and a portable antenna setup -- perfect for the back of
>the car or field days.

That would be me. See "Quick, Inexpensive and Effective: A Simple
Satellite Mobile QRP Station for the Beginner". However, my setup
used a homemade quagi antenna, not the Arrow antenna. You
are probably thinking of Chuck Duey KI0AG. He's the guy with the
Arrow Antenna, and has also done much to promote AO-27.

>What this ham did was put everything together in a nice, easy to
>transport package which he could just toss in the back of his car, or
>carry while hiking, on field day, or whatever.

Completely true. Check out the paper and you will see the back
trunk of my car with my mobile station. The uplink was an old
Tempo S1 HT at one and one-half watts. AO-27 has a super
sensitive receiver! Remember: don't transmit on the uplink until
you can hear the downlink!! AO-27 *WILL* hear you and it
will retransmit your signal.

>The paper is in the 1996 AMSAT meeting proceedings which is
>available from your lovely local Martha. Call Martha at
>301-589-6062 and tell her that you'd like to purchase a copy
>of the 1996 Symposium papers. It's about $12 and well worth
>the cost!

While you're talking to Martha, why not join AMSAT?

If anyone has any questions about AO-27 or my portable
satellite station, please feel free to ask me via email.
However, if you want to know about the Arrow antenna
you better ask Chuck Duey KI0AG.

1690. ??? Power Amplifiers for use with ICOM AG25 and AG35 Preamplifiers

Newsgroup: rec.radio.amateur.space
Date: 1997-06-10 00:00:00 UTC
From: jleikhim@nettally.com
Message-ID: <5nihsp$c0j@server.cntfl.com>
Source record: 18750

I am looking to purchase 2 meter and 70CM amplifiers for use with my satellite station. I have an ICOM 970A and a pair of mast mounted AG series preamplifiers. These preamplifiers derive power from the coax and switch off during TX when the DC voltage is dropped off.

I need to get copies of the schematics of some of the popular amplifiers to determine how easily I can provide DC continuity through the receive relay contacts of any available commercial amplifiers. I am looking for schematics of the following:

TE systems
Mirage
RF Concepts
RF Limited
TelTec
etc.

Amplifiers under consideration are those models with an input range of 10 to 25 watts and 100 to 170 watts output.

Please check the schematics of any amplifiers you might own and advise if DC continuity exists from the input to output in the receive mode, or if it can be modified easily. If your model has a preamplifier option that can be removed to restore DC continuity, that would be Ok too.

Please respond via e-mail and advise if any models exist which would meet my requirements.

1691. MIR info...

hello... being new to ham radio, i was wondering if someone could help with a problem i have been having with contacting mir?

specifically, i am tuned to the proper u/l and listening to the proper d/l, i am using about 5 watts (sometimes 10), and using an omni 2m antenna... when mir comes overhead (based on traking data and current keps) i can't seem to reach their packet (or voice) station. is my station properly set up for space comms or will i need to get a directional (dish?) for talking to sats?

Currently, what you hear is the digital signal, and that's it on
145.800 MHz.

I don't have a packet so I don't know what kind of messages we are
getting from up there.

Try STS Orbit Plus. It is found on the NASA Spacelink websight:

http://spacelink.msfc.nasa.gov/Instructional.Materials/Software/IBM.PC/Satellite.Tracking/STSOrbit.Plus/.index.html

2-line tracking elements are also available elsewhere at that site.

1697. Re: QUALITY satellite tracking software?

Newsgroup: rec.radio.amateur.space
Date: 1997-06-10 00:00:00 UTC
From: Roberto Franceschetti <pamela@netwide.net>
Message-ID: <01bc75ec$7110f680$068bd4d0@miseno.netwide.net>
Source record: 18757

A new version of LogSat Professional has just been released this weekend.
It features astounding maps that you will not find on any other software.
Check out http://www.logsat.com for more information and an online order
form. You can also see it on the latest AES catalog.

No, you don't need any special equipment to work MIR. YOu should be doing just fine where reception is concerned. You are probably a little under power to get to the station, especially when some hotdogs are sending with 200 watts and you're using 5 to 10. I have worked the station with an HT and a rubber duck, but those occassions are still very rare. The screech you are hearing is digital transmission, or packet. Different antenna designs might be of help to you, but they aren't completely necessary.

PHOTO PHOENIX INTERNATIONAL

We are an international New York based agency representing professional and amateur photographers in the following areas: Galleries, Business and Organizations, Book Publishers, Paper Products, Consumer Publication, Newspapers & Newsletters Publication, Special Interest Publication, and Trade Publication.

The images we are seeking are some of the following: Animals/Architecture/Art/Automobiles/Business/Celebrities/Documentary/ Entertainment/Erotica-Nudity/Fashion/Food/Health/History/Hobbies/ Outdoors/People/Political/Portraits/Still Lifes/Religious/Science/ Sports/Travel.

Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, please submit a query letter, and samples of your work. Please include SASE.
Do not send entire portfolio unless we ask for it. If we are not interested, you may not hear from us because of time limitations, so please submit what does not need to be returned. If we think your work is sellable we will respond as quickly as possible.

You may need a bit more uplink power (40-50 watts), and you may need an antenna mounted preamp if you're using lots of lossy feedline. But you should be able to work MIR with an omni antenna. Alternatively, you could go to a directional antenna, probably a yagi not a dish (a 2m dish would need to be *huge* to have much gain). That will require accurate steering however, and is probably more trouble than adding a bit of power and a preamp to a fixed station. For portable operation, however, a hand steered yagi might be a better choice, a 4 or 5 element beam should be sufficient with a short low loss feedline. You don't need a big array such as is required for Oscar 10 in order to work MIR.

(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

---
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not

use the satellite if the beacon frequency wavers, or if downlink signals chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse.

* Radio Sport-10's beacon, ROBOT and transponder remain silent while designer and builder Andy Papkov carries out experimental work with the satellite from the RS3A command station. Leonid Labutin UA3CR reports that it is hoped that RS-10 will be active again soon, long before it's tenth birthday.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite. Where six months back RS-15 was self-switching all it's systems off soon after entering eclipse, then two months ago continuing to function well into shadow, RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight. This effect is evidenced whenever high power uplink stations come up on the transponder. The satellite normally recovers within a few seconds, only to switch off again when the QRO operator(s) re-appear. The lesson to be learned is for users to improve their downlink reception, and NOT to increase their uplink power in order to hear (just) themselves. 100w erp is more than enough to produce an adequate signal from RS-15 on the single proviso that other users do not run more than this.

* Radio Sport-16 currently has its Mode A transponder turned off. Reports out of
Russia speculate that the transponder may be turned on for amateur use sometime in June. Andy Mirinov RK3KPK reports that RS-16 "now has a new voice on CW" All reports received by Andy of this latest Russian satellite will be
answered by him with a QSL card.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

1997 June 6(Fri) 08:25z JA
13(Fri) 00:39z JD 1200bps PSK MailBox
20(Fri) 09:41z JD 9600bps FSK MailBox

27(Fri) 00:11z JA
July 4(Fri) 09:13z JD Digi-talker
8(Fri) 09:06z JA

* Mir Simplex has returned to active status due to the efforts of
Ham-astronaut Mike Foale, KB5UAC, who recently joined the MIR crew. Lately
he has been very active on 2 Meter Simplex and has been given permission to
operate SAFEX as well.

* SAREX Mission STS-94 Nominal orbital data is now available on the AMSAT
Web Page. The time-independent State Vector and the Keplerian elements
corresponding to the scheduled launch time of 01-JUL-97 / 18:37 UTC are
available at:

http://www.amsat.org/amsat/sarex/orbit.html

CREW MEMBERS with Amateur Radio call signs:
James D. Halsell, Commander, KC5RNI
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M
Linear Downlink 10M

Mode T: Uplink 15M
Linear Downlink 2M

Special Event Station

From 21st June until 29th June a group of keen RS enthusiasts consisting
of G4CUO, G4ZHG, G0MKA, G7MUB, G8DYK and G0MKA will be celebrating the ten
years of faultless operation provided by the Russian RS-10 satellite.
They will be active with the callsign GB0RAS on all modes on each and every
pass of RS-10, RS-12, RS-15 and the Japanese FUJI satellites also. A serial
number will be given for all QSO's on each satellite, and a very special
QSL card will be sent to each station contacted or SWL report received.

This FAQ is being updated and re-released on a weekly basis on
or about Monday. Any constructive suggestions are always welcome.

The installation software used to setup LogSat is one of the best two available for Windows. If it fails it is very likely that there are problems with the user's computer. Of the (tens of) thousands downloads of the past two years this is only the third (reported) problem encountered during the installation procedure. We'd say this is an excellent result. There are bound to be messages posted following this, reporting of more errors, but there is no software free of problems. And a few troubles out of dozens of thousands of installations is still a great success, considering the variety of machines used.

If you let us know what problems you're having while running LogSat we might be able to help you out.

1715. re Leicester Radio Society, UK

Newsgroup: rec.radio.amateur.space
Date: 1997-06-13 00:00:00 UTC
From: jalex@easynet.co.UK
Message-ID: <33A1AC23.535B@easynet.co.uk>
Source record: 18677

Worldwide E-Mail PRESS / INFORMATION RELEASE - Dated: 12 June 1997

From:- Leicester Radio Society (LRS), Gilroes Cottages, Off Groby Road, Leicester. England. LE3 9QJ (Callsigns - G2AA / G5UM / G3LRS / G6XRS)

John Alexander / G7GCK. Chair of Leicester Radio Society. E-mail lrs@jalex.easynet.co.uk

Subject:- Leicester Radio Society Associate Membership Discount Card

Dear Sirs,

LRS is one of the oldest radio societies in the UK (formed 1913) and now requires a move to newer premises with better facilities for training and operating - ready for the next millennium.

We have negotiated a series of discounts with hotel groups and car rental companies within the UK. Anyone who needs to hire a car or book hotel rooms within the UK could benefit from our card and make savings - up to 35% for car hire.

Companies currently with us include Avis Rent A Car Ltd, Hertz (U.K.) Ltd, EuroDollar Rent A Car, Stakis Hotels, Wayfarer Inns and Jarvis Hotels. Together, these excellent companies offer a superb range of accommodation and vehicle hire possibilities.

It is not necessary to be a licensed Radio Amateur in order to obtain a card - it is available to anyone, anywhere around the world, who may visit the UK. Some Car rental companies are also offering discounted rates within the USA and Europe.Every card purchased increases the funds available for those new premises, equipment and training.

As the cards are taken up we expect that other companies will offer discounts, broadening the range and type of savings that can be made - these will be updated onto our new web site.

The discount card has been priced at £10 (Sterling) and can be obtained using a Mastercard, Eurocard or Visa credit card. We intend that this modest cost is recovered very rapidly as bookings, and consequent savings, are made.

Our new website contains details about LRS, its members and what we are hoping to achieve. An order form for the Discount Card is included and can be printed, completed and posted to us here in the UK. Subscribers should allow 28 days for delivery.

Check out http://www.foobar.co.uk/dialin/silver/lrs The web site gives information about membership / associate membership and the benefits of joining up with us.

We are a reputable Amateur Radio Society with big ideas for the future. LRS seeks only to further Amateur Radio in general and all monies raised will be used to this end. JA

We hope that you will include this information within your publication(s) and websites and bring it to the attention of your readers.

Please direct any enquiries to me, John Alexander, via snail-mail, fax or E-mail at the above numbers / addresses. Anyone requiring hardcopy text on LRS Letterheads can be supplied with these via standard mail or fax upon request.

With regards

John Alexander / G7GCK

SB SPACE @ ARL $ARLS017
ARLS017 Seventeen schools on STS-94 SAREX schedule

ZCZC AS17
QST de W1AW
Space Bulletin 017 ARLS017
From ARRL Headquarters
Newington, CT June 13, 1997
To all radio amateurs

SB SPACE ARL ARLS017
ARLS017 Seventeen schools on STS-94 SAREX schedule

Thanks to SAREX--the Shuttle Amateur Radio EXperiment--students at 17 schools, including one in the People's Republic of China, are scheduled to talk with the astronauts on the upcoming STS-94 mission aboard the shuttle Columbia. STS-94 is a ''refly'' of the April STS-83 mission that had to be cut short when a problem developed in one of the shuttle's fuel cells. STS-94 is set to launch on July 1. During the earlier mission, Columbia prematurely returned to Earth April 8 without making any of the scheduled SAREX QSOs. Most of the schools on the earlier schedule remain on tap for the July mission, which will again carry the microgravity science lab. Three hams are among the STS-94 crew members. They are Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF.

Under the SAREX program, students at each of the selected schools ask questions of the astronauts during the contact. The primary goal of SAREX is to excite students' interest in learning.

Schools selected by the SAREX Working Group for a ham radio contact during this mission include: Mountain View Elementary School, Prescott Valley, Arizona; Center Street School, El Segundo, California; Ione Junior High School, Jackson, California; Foursquare Radio Amateur Youth, Oxnard, California; Crittenden Middle School, Mountain View, California; Robert J. Burch Elementary School, Tyrone, Georgia; Edgewater High School, Orlando, Florida; Lexington Traditional Magnet School, Lexington, Kentucky; Discovery Place Inc, Charlotte, North Carolina; Lawrence Intermediate School, Lawrenceville, New Jersey; Yeso Elementary School, Artesia, New Mexico; Public School No 9, New York, New York; Du Bois Middle School, Du Bois, Pennsylvania; Dunn's Corners Elementary School, Westerly, Rhode Island; Alvin C. York Agricultural Institute, Jamestown, Tennessee; S.J. Davis Middle School, San Antonio, Texas; and Tsinghua University, Beijing, People's Republic of China.

During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. This crew will use KC5RNI, KC5BTK and KC5FVF on FM voice and W5RRR-1 on packet. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world. On many missions, they have even carried a 2-meter packet radio station. Innovative computer software allows the crew to operate the packet gear in an ''unattended'' mode, allowing amateurs to make contacts with the ROBOT station when the astronauts are working or sleeping.

The SAREX Working Group has designated the following frequencies during this mission. FM voice downlink (worldwide): 145.55 MHz; FM voice uplink (except Europe): 144.91, 144.93, 144.95, 144.97, and 144.99 MHz; FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz; FM packet downlink: 145.55 MHz; FM packet uplink: 144.49 MHz.

Hams should avoid transmitting on the shuttle's downlink frequencies. The uplink is your transmitting frequency. The crew will not favor any uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

QSLs go to ARRL EAD, STS-94 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information in your QSL or report: STS-83, date, time in UTC, frequency and mode (FM, voice or packet). You must also include a business-sized SASE.

Additional STS-94 mission information is available from NASA at the NASA Shuttle Web site, http://shuttle.nasa.gov.

1717. KLM vs M2 Satellite Antennas?

Newsgroup: rec.radio.amateur.space
Date: 1997-06-13 00:00:00 UTC
From: Mike Blanchard <phoenix@flash.net>
Message-ID: <33A21D98.402B@flash.net>
Source record: 18679

I looks like both KLM and M2 have 2m & 70cm circular polarized yagi antennas that are long and longer. It looks like the gain for the longer ones is only ~2db more than their long version. Is the longer version worth the extra $70.00 ?

Is there any difference in the mechnical or electrical quality of the two brands of satellite antennas (KLM vs M2)?

I just purchased a Yeasu G5400B rotor and need to know what kind of coax to use to connect to the satellite antennas (KLM vs M2)?

Thanks,
Mike

Nova "predicts" passes to the extent that it gives the next AOS time and
the next LOS time. It does not give a minute-by-minute az-el location
of the sat on the next pass however, like Instant-track does. For that
reason, I still use Instant-track a lot. As far as the Windows trackers
goes, I think Nova is still the best I've seen.

Mir is on 145.800 downlink and 145.200 uplink. I don't know about the
Shuttle.

STSPlus is a very good program. It has a lot of nice features and it's
free. Do a search on the web for it.

Dear friend ,
Thanks for reading my help message.For the past one month i have been
trying to work with these two sattelites but nothing happens.
I am working with 35 W for UHF and 50 W for VHF.My QTH is Cyprus (5B4AET).
I'm sure that i'm tracking them correctly.
Please give me the frequencies for UP and DOWN so that to confirm i'm using
the correct ones and any other info you may know.(Are they operative in my
area???)
Thanking you in advance.
Panicos C 5B4AET

From: Giovanni Abrate <tryphon@worldpass.net>
Message-ID: <33a2b466.0@207.22.162.16>
Source record: 18684

The Judica-Cordiglia brothers started tracking the early artificial satellites from their listening station in Northern Italy in the late fifties. In 1961 they picked up and recorder radio signals from a manned russian capsule, before Youri Gagarin's flight. The signals clearly showed that the cosmonaut was dying. The mission was never disclosed by the soviet authorities. A few weeks after Gagarin's flight, which they tracked and recorded, they picked up the voice transimissions of a female cosmonaut in dire trouble. They actually recorded her last words! RealAudio files can be heard in 'The Lost Cosmonauts' a new web site which exposes these early soviet tragic space flights. The Judica-Cordiglia brothers, who are still active in Turin, Italy, should be recognized as the First of the Space Radio Amateurs.
Please visit this interesting web site and help us promote it.
Thanks,
Giovanni Abrate

1725. Distributors Wanted NOW!!

Newsgroup: rec.radio.amateur.space
Date: 1997-06-14 00:00:00 UTC
From: Tony Scott <summer@laoffices.com>
Message-ID: <5nue64$84p$9408@cadmium.aware.nl>
Source record: 18685

Hi,

This is a Solicitation Email, we are looking for new TUFF'97 DISTRIBUTORS.
TUFF'97 is a promotional concept for a prospect follow-up system called
"Simple Track". Software designed for Windows 95, 3.11 and NT
machines. (Macintosh users read the NOTE below(*))

Concept:

The TUFF'97 software includes a copy of Simple Track, so you can use this
for your own personal administration (free). However, the TUFF'97 software
is designed to give you BIG TIME credits for just taking the efforts to
PROMOTE it.

How do I get those credits?. Easy, just distribute/promote it. How?
(Give away the software for free, put it on your website/homepage
and let everyone download it. Give it to your friends, attach it by
email etc). With a one time $40.00 (USD) validation code purchase,
YOUR name becomes part of all sofware you sent out to your customers.
When your TUFF'97 software gets validated, all your personal information is
automatically integrated in the software, so everyone knows how to reach
you by phone/fax or email and where to sent the check/money or cash orders.

Basically this is the concept. Offcourse you need the software to grasp
the whole thing. Believe it, there is absolutely no marketing knowledge
required, just ask for the software package, join and start promoting your
own TUFF'97 line. The only thing you DO need is a PC or Mac(*) and Internet.

(*) TUFF'97 is only available for MacOS users running Connectix VirtualPC
or Insignia's Sofwindows 95/3.11. A true MacOS version is not available.

When you're interested in becoming a TUFF'97 distributor and create your own
distribution line, sent a mailto:FiReStArTeR@frodo.com and ask for your
copy of the TUFF software (We'll sent you a download location and install
instructions). This is a serious opportunity, so only serious responses
are processed. If you're not interested, have a nice day.
Best Regards,
Tony Scott

I applaud Drake for their latest 2 meter (FM) base station radio offering.

However I note with dismay what appears to be misleading information in the AD copy in the latest AES catalog. Drake is calling this radio a "satellite" rig. And although it may indeed be useful for a few of the FM birds, MIR and packsats, the impression that many who shell out $1400 will have is that they may indeed work ALL the satellites in the radios passband. I doubt the LEILA circuit in Phase 3d is ready to deal with the onslaught of these new Drake users trying to get their moneys worth.

Hello Panicos,

First of all AO-21 is dead. Several years ago the Russian space craft it is riding on had the systems shut down. At that time we lost the transponder.

The AO-27 transponder is working quite well but it may be turned off when it is over you. Due to power limitations it is only on during daylight hours when it is over North America. I do not know if it is on over Europe or the Middle East at all. If it is available you can hear the downlink on 436.800 +/- Doppler. I use a hand held Yagi-Uda 70cm beam for the down link and find the satellite carrier easily even when the satellite is not in use. Perhaps someone else can advise you if it is even available in your part of the world. If it is I can help you learn to use it.

MIREX INFO/MIR FREQ. CHANGE

HR AMSAT NEWS SERVICE BULLETIN 166.01 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 15, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-166.01

To: Amateur Radio Stations
From: MIREX Mir International Amateur Radio Experiment
Subject: Mir Frequency change experiment
Date: June 13, 1997

A frequency change experiment is tentatively scheduled to take place the weekend of June 15th at 1200 UTC with the 2-meter station on board the Mir Space Station. The duration of the experiment has not been finalized, we would like your inputs on the results. The MIREX team has received numerous
complaints from around the world, stating the existing Mir 2-meter channels

are not usable. In November 1996 Mir changed from the successful channel 145.550 simplex to a 145.200/800 split frequency. This combination of channels (145.200/800) does not work very well for most parts of the world. In many countries the 145.200 is used for repeater Outputs or Inputs. The 145.790 channel is in use by many semi-permanent packet operations. The new temporary frequency which MIREX has requested is 145.985 Simplex. All operations, Voice and Packet will be on 145.985 Simplex. This frequency was chosen for three primary reasons. First it complies with the ITU International Band plan for Satellite operations. Second, It gets Mir away from most of the terrestrial based interference. Third, The Mir 2-meter station is desensed by commercial VHF activities on board Mir (in the 143 MHz range).

Stations are encouraged to listen to the Mir activities on the new channel and send your Signal and Interference reports to the CEO of MIREX, Dave Larsen. It is very important to participate and send reports. This is

an opportunity to provide useful input.
Address:
E-mail doc @ volcano.net

Packet n6co @ N0ARY.#NOCAL.CA.USA.NOAM
Postal N6CO POB1501 PINE GROVE CA 95665

Please do not send Signals reports via the Mir PMS mail box. And do not bother the Mir crew members about the frequency change. This frequency experiment is solely the responsibility of the MIREX Working Group. The MIREX Working Group would like the thank all of the people involved with assisting in this information gathering experiment, including the Mir 23 Crew members and the Chief of Cosmonaut Amateur Radio Department RSC.

Suggested Report format: (pre-amps turned off, state antenna style, then describe interference if any)
Elevation Degrees / S-Unit
5 5
10 9
30 +10
50 +20
30 8
10 6
5 2

[ANS thanks Dave Larsen, N6CO/K6MIR, for this news about MIR,.]

SB SAT @ AMSAT $ANS-166.02
SCHOOLS ON STS-94 SAREX

HR AMSAT NEWS SERVICE BULLETIN 166.02 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 15, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-166.02

Thanks to SAREX--the Shuttle Amateur Radio EXperiment--students at 17 schools, including one in the People's Republic of China, are scheduled to talk with the astronauts on the upcoming STS-94 mission aboard the shuttle Columbia. STS-94 is a ''refly'' of the April STS-83 mission that had to be cut short when a problem developed in one of the shuttle's fuel cells. STS-94 is set to launch on July 1. During the earlier mission, Columbia prematurely returned to Earth April 8 without making any of the scheduled SAREX QSOs. Most of the schools on the earlier schedule remain on tap for the July mission, which will again carry the microgravity science lab. Three hams are among the STS-94 crew members. They are Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF.

Under the SAREX program, students at each of the selected schools ask questions of the astronauts during the contact. The primary goal of SAREX is to excite students' interest in learning.

Schools selected by the SAREX Working Group for a ham radio contact during this mission include: Mountain View Elementary School, Prescott Valley, Arizona; Center Street School, El Segundo,

California; Ione Junior High School, Jackson, California; Foursquare Radio Amateur Youth, Oxnard, California; Crittenden Middle School, Mountain View, California; Robert J. Burch Elementary School, Tyrone, Georgia; Edgewater High School, Orlando, Florida; Lexington Traditional Magnet School, Lexington, Kentucky; Discovery Place Inc, Charlotte, North Carolina; Lawrence Intermediate School, Lawrenceville, New Jersey; Yeso Elementary School, Artesia, New Mexico; Public School No 9, New York, New York; Du Bois Middle School, Du Bois, Pennsylvania; Dunn's Corners Elementary School, Westerly, Rhode Island; Alvin C. York Agricultural Institute, Jamestown, Tennessee; S.J. Davis Middle School, San Antonio, Texas; and Tsinghua University, Beijing, People's Republic of China.

During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. This crew will use KC5RNI, KC5BTK and KC5FVF on FM voice and W5RRR-1 on packet. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world. On many missions, they have even carried a 2-meter packet radio station. Innovative computer software allows the crew to operate the packet gear in an ''unattended'' mode, allowing amateurs to make contacts with the ROBOT station when the astronauts are working or sleeping.

The SAREX Working Group has designated the following frequencies during this mission. FM voice downlink (worldwide): 145.55 MHz; FM voice uplink (except Europe): 144.91, 144.93, 144.95, 144.97, and 144.99 MHz; FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz; FM packet downlink: 145.55 MHz; FM packet uplink: 144.49 MHz.

Hams should avoid transmitting on the shuttle's downlink frequencies. The uplink is your transmitting frequency. The crew will not favor any uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

QSLs go to ARRL EAD, STS-94 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information in your QSL or report: STS-94, date, time in UTC, frequency and mode (FM, voice or packet). You must also include a business-sized SASE.

Additional STS-94 mission information is available from NASA at the NASA Shuttle Web site, http://shuttle.nasa.gov.

During the mission STS-94 SAREX information, including the latest bulletins, Keplerian elements, and rise and set times, can be obtained on the SAREX Web Page http://www.nasa.gov/sarex/sarex.html"

[ANS thanks the ARRL for this report on STS-94.]

/EX

SB SAT @ AMSAT $ANS-166.03
P3D MILESTONES REACHED

HR AMSAT NEWS SERVICE BULLETIN 166.03 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 15, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-166.03

Regular users of FO-20 may have been puzzled by a strange buzzing sound on its mode JA transponder over the last couple of weeks. This was due to command stations testing the new P3D Range Determination software and hardware. P3D's orbit will change significantly after motor firings, and NORAD will lose track of us. So would we! The P3 ranging system enables our world wide network of Command Stations to measure distance to the satellite from different locations and at different times and so compute the new orbit's keplerian elements. This information is used by us, the AMSAT community, and of course given back to NORAD so that they can re-acquire our satellite by radar. This methodology was used to remarkable

effect in picking up Oscar-13 after both its motor firings.

Back in 1988, the P3C engineering software was still based on the Atari-800XL computer. This was a legacy from the very successful designs originating as far back as 1979 and the ill-fated P3A satellite (1981). However the prospect of working on P3D yet again using a dual audio cassettes for storage and 8-bit 2 MHz processors has never been very attractive, and a re-engineering of many of the tools has been undertaken by James Miller, G3RUH, over the last couple of years. The P3 Range Determination package marks the successful completion of a substantial development program that includes the following principal packages:
- Tracking
- Telemetry Display
- Command Uploader
- IPS-X1802
- Ranging
- OrbitFit

Tracking of course needs no introduction.
Telemetry Display is essentially as already available for AO-13, but with P3D specific changes. This will be publicly released for several platforms

when P3D is finally "nailed down". Command Upload software is used for commanding the spacecraft both during lab-testing and in space. These first three packages were used for AO-13.

P3D, like its predecessors, has a flight computer based on a radiation hardened CDP-1802 microprocessor. It runs an operating system called IPS. But generation of the flight operating system and on-board control software is done on a ground-based host computer. The IPS-X1802 package is, as its name suggests, a cross compiler. Source files for P3D are written using the

IPS language. They are compiled by the IPS-X1802 development system (itself written in IPS) which outputs a target binary in 1802 machine code.

In the days of P3A/B/C, this compilation used to take half an hour on the Atari-800XL. Imagine how tedious a simple edit used to be. Flight software compilation, from source files to uploadable binary, now takes half a second. The IPS-X1802 cross-compiler is a major part of the P3D development program. Without it, the flight software which controls the spacecraft, and is much different than that of P3A/B/C, would be impossible

to produce efficiently in the short timescale left to us.

The Ranging software, mentioned earlier, measures range to the satellite with a basic accuracy of about 150m (1 microsecond). Comparison of ranges measured via FO-20, with ranges displayed by regular tracking programs, shows agreement within 5 km, often better. During tests, signal strengths have been kept to the absolute minimum needed for "lock", and are weaker than AO-13's general beacon used to be. The uplink power to FO-20 is typically under 1 watt to a KLM14C antenna, rather less than a typical SSB user's. The ranging software can track down to a level where the signal is

virtually inaudible. Sample GIF (5 Kbytes) taken during an FO-20 pass is at: http://www.jrmiller.demon.co.uk/IPS/range.gif

The final program OrbitFit takes range measurements from the network of command stations, and computes an orbit that best fits the data. It was written 10 years ago by Stefan Eckart, DL2MDL, and has been adapted for our current needs by G3RUH. Tests processing FO-20 ranging data have been completely successful. Software is written in Basic and ARM assembler for the Acorn Risc Computer. Current machines use the DEC SA-110 processor at typ. 200 MHz/700 mW/$50, highest MIPs/mW and MIPs/$$ (taken together) in the business and currently the embedded systems processor of choice. Makes

a cool personal computer too. Acorn Risc Computer:
http://www.acorn.co.uk/acorn/products/strongarm/

DEC SA-110 information:
http://www.europe.digital.com/info/semiconductor/sa110.htm

Software is not as photogenic or as sexy as hardware, and thus gets little or no exposure. Yet Miller hopes this short precis gives an idea of how the
backroom boys have been keeping busy. There are many such heroes in the P3D program, but G3RUH will just cite fellow P3D command stations Peter Guelzow DB2OS, Graham Ratcliff VK5AGR, Stacey Mills W4SM and Ian Ashley ZL1AOX for enthusiastically thrashing every development as it has staggered

off the production line.

[ANS thanks James Miller, G3RUH, for this information.]

40th ANNIVERSARY of SPUTNIK 1

HR AMSAT NEWS SERVICE BULLETIN 166.04 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 15, 1997

TO ALL RADIO AMATEURS BT
BID: $ANS-166.04

On October 4th 1957 Russia launched the worlds first man made satellite Sputnik 1. Its CW signals on 20 MHz and 40 KHz were heard by radio amateurs around the world.

Join in celebrating this fine achievement. The club call, M1ASE, (Amateur Satellite Experimenters) will be on air for 24 hours on October 4th 1997. Activity will continue throughout the month and into November ending at 2359 UTC on November 3rd, the date of the 40th anniversary of the launch of Sputnik 2.

M1ASE will be active in voice mode on all of the available analogue sats. concentrating on the Russian satellites RS-10, RS-12, RS-15, RS-16. There will be an SWL award, special QSL cards and an award certificate when you work us on more than one satellite. Make a note in the shack diary and look out for further bulletins nearer the event.

TO ALL RADIO AMATEURS BT

BID: $ANS-166.06

Several people have asked about when AMSAT might be able to discern AO-10's current attitude, illumination. Stacey E. Mills, W4SM, has run some routines and put this information on one of his web pages, along with a lot of other AO-10 related stuff, FAQ's etc at:

http://www.cstone.net/~w4sm/AO-10.html

As time permits, Stacey will update this with some more historical information. The information regarding attitude must be taken with a large "grain of salt", but it's based on what little he can determine. It's interesting to postulate how AO-10's attitude may have changed fairly dramatically in the last few months.

Stacey E. Mills, W4SM,

HR AMSAT NEWS SERVICE BULLETIN 166.07 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 15, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-166.07

MIR:
(All operations, Voice and Packet will be on 145.985 MHz, Simplex FM)
[ANS thanks Dave Larsen, N6CO/K6MIR, for this report}

RS-10
(Uplink 145.865-145.905 MHz CW/SSB, Downlink 29.36-29.4 MHz CW/SSB)
RS-10 Still silent.
RS3A needs some SWL reports of RS-10.
What time you heard RS-10, and also the date.
Send info via packet to Andy, .RS3A.
Packet: RK3KPK@RA3KP.MSK.RUS.EU

RS-12
(Uplink 21.21-21.25 MHz CW/SSB, Downlink 29.41-29.45 MHz or
145.91-145.95 Mhz CW/SSB)
Signals on RS-12 in North America during May and June (almost exclusively daylight passes) are weakened by increased ionospheric activity which is keeping 15m active during the daylight hours.
This makes it especially important for the 'old timers' to warn the newcomers on RS-12 to set their uplink frequency and leave it alone to prevent sweeping across the 15m band and QRM-ing the terrestrial QSOs in progress
[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
Be aware that RS-15 has battery charging problems. When the satellite is

in the dark it has low output power..
[ANS thanks Geoff Perry for this report.]
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
RS-16's 435.504 MHz beacon is active.
The transponder and the 10 meter beacons are not
active at this time.
70 cm beacon: RS16 ZEAA ZEJA ZEAA(AA is sent as one
characrer);P163,o0,n0,m0,l0,k7,j5,i7,h49,g0,f159,e8,d6,c8,b11,a7.

Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 , 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W
[ANS thanks Bernie Hall, WY4D, for this report.]

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9
MHz CW/USB)
Operating normally. Strong downlink signal. Very busy
during passes over North America. Please remember to adjust the
higher frequency for doppler when the bird is in analog, JA, mode.
This means adjust the 70 cm frequency, the downlink, for doppler
shift. You do not have to adjust the 2 meter frequency, the uplink,
for doppler.

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK.)
KO-23 operating normally.
The latest version of Fodtrack, (homebrew rotator controller software), can
be found on KO-23. This version corrects some of the bugs found on earlier
versions.

KO-25
(Uplink 145.980 MHz FM, Downlink 436.5 MHz FM,
9600 Baud FSK.)
KO-25 operating normally.
[ANS thanks Jim Weisenberger, AA7KC, for his reports on
KO-25 and KO-23.]

AO-27
(Uplink 145.85 MHz FM, Downlink:
436.792 MHz FM (As of April 1, 1997)
Operating normally.

AO-27 (1-Jun-1997- 10:58 UTC Orbit-19182)
The satellite is working normally over North America.
and Europe.
Current AO-27 schedule information can be found at
www.umbra.com

Tepr 4 = 32 counts 16 Minutes
Tepr 5 = 66 counts 18 Minutes
The Transmitter xtal is changing with time. From the first day AO-27
was in orbit the Transmit Frequency has been shifting lower. Many
have not checked the zero doppler frequency closely enough to see that it
is dropping. Every few months Michael Wyrick, N4USI, has to change
a setting that moves the freq. a KHz or so up in freq. This setting only
has a range of about 7 KHz total. This means that after a while Michael
can't compensate for the change and has to reset the setting back to zero.
This causes the freq. to drop about 7 KHz when he does this. There is not
a way around this and the Tx freq. will continue to drop as the xtal ages.

The satellite is coming up on the end of range for this setting and in
several months the freq. will seem to drop again. If N4USI had not put the

correction hardware on-board, you would see a continuous shift in tx
frequency. AO-27 Will turn on Every pass 16 Minutes after entering the sun
and will stay on for 18 minutes. This corrects the early shut off that
has been going on for the passed few weeks.
[ANS thanks Michael Wyrick, N4USI, AO-27 Control-op, for this update.]

FO-29
Voice/CW
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Digital
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600 baud
BPSK)
Please remember to adjust the
higher frequency for doppler when the bird is in analog, JA, mode.
This means adjust the 70 cm frequency, the downlink, for doppler
shift. You do not have to adjust the 2 meter frequency, the uplink,
for doppler.

The latest FO-29 Schedule can be found at.

[ANS thanks Clive Wallis, G3CWV, for this information.]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86 MHz FM, 1200 bps Manchester FSK
Downlink 437.0513 MHz SSB, 1200 bps RC-BPSK 1200 Baud PSK.
Beacon 2401.1428 Mhz.)
The telemetry data received from the satellite show
a TX Out power of 0.442 Wtts.
Total Array C= 0.252 Bat Ch Cur=-0.024 Ifb= 0.040 I+10V= 0.280
TX:010B BCR:82 PWRC:59E BT:3C WC:25 EDAC:AC

Graphic information about WOD/Telemetry values can be found at:
http://www.arrakis.es/~ea1bcu/wod.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

DO-17(DOVE)
(Downlink 145.825 MHz FM, 1200 Baud AFSK.
Beacon 2401.220 MHz.)
WJ9F is continuing to work on reloading DOVE.
[ANS thanks Jim white, WD0E, DO-17 Command Team, for this news.]

WEBERSAT (WO-18)
(Downlink 437.104 MHz SSB, 1200 Baud PSK AX.25.)
Webersat (WO-18) is currently in MBL mode after a system
crash. The satellite appears to be in good condition broadcasting
MBL telemetry.
[ANS thanks Tommy Davis, IK3WVJ, for this report.]

LUSAT-OSCAR-19
(Uplink 1200 bps Manchester FSK Uplinks:
145.84, 145.86, 145.88, 145.9 MHz FM, Downlink 437.125 MHz SSB,
1200 bps RC-BPSK.)
Operational.
The telemetry data received of the satellite report
a spin rate/rev = 2 min.
With a rotation sense of the solar panels in
the magnetic north (+X, -Y, -X, +Y)

Graphic and general information about Telemetry values can be found at:
http://www.arrakis.es/~ea1bcu/lo19.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

UO-22:
(Uplink: 145.9 or 145.975 MHz FM. Downlink 435.120 MHz FM
9600 Baud FSK.)
A problem with UO-22 seems to be related to the software changes that
were made last week prior to the last flight software reload. During
the last pass over Surrey on Saturday morning, June 7th, Chris Jackson
closed the spacecraft store and forward communications system for general
use to allow him to diagnose the problem..
[ANS thanks Chris Jackson, G7UPN / ZL2TPO,
Groundstation and Operations Manager, for this report.]

IO-26 (ITAMSAT)
(Uplink 145.875, 145.9, 145.925, 145.95MHz FM, Downlink 435.822 MHz SSB,
1200 Baud PSK.)
IO-26 controllers report that the spacecraft is now in IHT mode. The new
ROBOT software is under currently undergoing tests. The beacon reports
that the digipeater is OFF and that the ROBOT is undergoing tests.
Controllers ask that groundstations please do not transmit on any of
the satellite's uplink frequencies for the time being.
[ANS thanks Daniele Piercarlo, IK2XRO, ITMSAT Command Station for this
report.]

>
This radio is a ripoff. Someone should go to jail for the claims being made
for the rig. Could only be used currently for ao-27. Might as well
just get a mobile dual bander for one third the price.

1743. NAVSPASUR protoFAQ -- a bit more

Newsgroup: rec.radio.amateur.space
Date: 1997-06-16 00:00:00 UTC
From: thomsona@netcom.com
Message-ID: <thomsonaEBvnp3.F4o@netcom.com>
Source record: 18703

A couple more infobits on NAVSPASUR:

Naval Space Surveillance System (NAVSPASUR) solid state transmitter modernization.
Francoeur, A. R.
Proceedings of the 1989 IEEE National Radar Conference, Dallas, TX
The author describes the design of the modernized solid-state transmitter for the US Naval Space Surveillance System (NAVSPASUR) station transmitters at Jordan Lake, AL, Gila River, AZ, and Lake Kickapoo, TX. The modernized NAVSPASUR is the highest average power solid-state transmitter ever produced. With the antenna gain of the system, it produces an effective radiated average power in excess of 98 dBw. Solid-state modernization of the NAVSPASUR transmitter has produced significant cost and performance improvements, which are expected to extend the operating life of the system into the next century.

Linear Least-Squares Determination of Doppler Time Derivative for NAVSPASUR-Like Signals
Knowles, S. H.; Waltman, W. B.
IEEE Transactions on Instrumentation and Measurement, Vol.IM-34, No.1, March 1985, pp.64-69
A method is derived for optimum estimation of doppler, doppler time derivative, and other parameters for doppler-type radar returns, using linear least-squares estimation procedures. It is used on radar returns from the Naval Space Surveillance System to obtain improvement of at least one order of magnitude in doppler measurement from previous practice; doppler derivative has been measured for the first time. The accurate measurement of doppler derivative (typically PLUS OR MINUS 0. 2 Hz**2) has enabled a resolution of the inherent geometric degeneracy in the coplanar NAVSPASUR system, to provide a significant improvement in single-pass orbit determination accuracy.

---

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle
used to catch bits when they fall off the end of a register
during a shift instruction). Discarded, lost, or destroyed data
is said to have `gone to the bit bucket'. On Unix, often used
for /dev/null. Sometimes amplified as `the Great Bit Bucket in
the Sky'.

2. The place where all lost mail and news messages eventually go.
The selection is performed according to Finagle's Law;
important mail is much more likely to end up in the bit bucket

than junk mail, which has an almost 100% probability of getting delivered. Routing to the bit bucket is automatically performed by mail-transfer agents, news systems, and the lower layers of the network.

3. The ideal location for all unwanted mail responses: "Flames about this article to the bit bucket." Such a request is guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those figures last week; they must have landed in the bitbucket." Compare black hole.

This term is used purely in jest. It is based on the fanciful notion that bits are objects that are not destroyed but only misplaced. This appears to have been a mutation of an earlier term `bit box', about which the same legend was current; old-time hackers also report that trainees used to be told that when the CPU stored bits into memory it was actually pulling them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of the `parity preservation law', the number of 1 bits that go to the bit bucket must equal the number of 0 bits. Any imbalance results in bits filling up the bit bucket. A qualified computer technician can empty a full bit bucket as part of scheduled maintenance.

1748. NORAD Two-Line Orbital Element Sets (TLE013)

Newsgroup: rec.radio.amateur.space
Date: 1997-06-17 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5o4oub$6a9@blackbird.afit.af.mil>
Source record: 18708

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

1749. NORAD Two-Line Orbital Element Sets (TLE013)

Newsgroup: rec.radio.amateur.space
Date: 1997-06-17 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <5o4p9h$6b4@blackbird.afit.af.mil>
Source record: 18709

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial WWW:

http://www.grove.net/~tkelso/

and are updated daily (when possible). Documentation and tracking software are also available on this system.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

****

1750. Want Info: What 2meter/430Mhz freq. used in Phase III Sat?

Newsgroup: rec.radio.amateur.space
Date: 1997-06-17 00:00:00 UTC
From: wega@loop.com
Message-ID: <33a6112a.946522@nntp.loop.com>
Source record: 18710

Anyone know what the 435 Mhz and the 145 Mhz freq. range planned for
the Phase III Sat? Anyone know when it will be launched?
WE6A

If you have access to the world wide web, go to the AMSAT site at
http:/www.amsat.org Lots of info about Phase 3D there.

1756. Is P3D SW OK beyond year 1999?

Newsgroup: rec.radio.amateur.space
Date: 1997-06-17 00:00:00 UTC
From: Timo <ttk@na.netppl.fi>
Message-ID: <01bc7ad4$fa7d43a0$54eb9cc3@default>
Source record: 18716

Hi,

I wonder if P3D SW has been made so that is does not get confused with years after 1999 (I can hear horror stories about commercial SW almost every week nowadys). If P3D is OK, then, how is it with the existing sats now orbiting the earth? Presumably al least some of the SW can be downloaded but not those which reside in ROM.

Timo, OH8MBP

1757. *ICOM* Mailing List (and others)...

Newsgroup: rec.radio.amateur.space
Date: 1997-06-18 00:00:00 UTC

ICOM Mailing List (and others)...

Icom is a mailing list (reflector) devoted entirely
to equipment manufactured and distributed by Icom
America, Inc. of Bellevue, WA.

* equipment, accessories
* repairs, modifications, enhancements
* questions, discussions, etc
* buy, sell, trade, swap

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe icom

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe icom

To post items to the reflector, send email as follows:
TO: icom@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Kenwood is a mailing list (reflector) devoted entirely
to equipment manufactured by the Kenwood Communications
Corporation (Amateur Radio Products Group).

* equipment, accessories
* repairs, modifications, enhancements
* questions, discussions, etc
* buy, sell, trade, swap

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe kenwood

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe kenwood

To post items to the reflector, send email as follows:
TO: kenwood@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

-----

HomeBrew is a mailing list (reflector) devoted to amateur radio
and electronics experimentation and construction:

* building kits
* scratch construction
* radios, antennas, widgets
* design
* accessories
* station construction
* digital, analog, uP
* repair, modification, surplus

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe homebrew

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe homebrew

To post items to the reflector, send email as follows:
TO: homebrew@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

-----

Ham-Books is a mailing list (reflector) devoted to the literature
and periodicals of amateur radio:

* publishers
* magazines
* newsletters
* books
* old and "collector" books
* new book announcements

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe ham-books

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe ham-books

To post items to the reflector, send email as follows:
TO: ham-books@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Ham-Software is a mailing list (reflector) devoted to software
of all types used for amateur radio:

* logging
* propagation prediction
* digital modes
* award tracking
* commercial, shareware, freeware
* electronic design and simulation
* amateur software development

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe ham-software

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe ham-software

To post items to the reflector, send email as follows:
TO: ham-software@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Fox_Tango is a mailing list (reflector) devoted entirely
to "vintage" and "classic" equipment manufactured by the
Yaesu Musen Co., Ltd. of Tokyo Japan.

* equipment, accessories
* collecting, restoring, refurbishing
* buy, sell, trade, swap
* repairs, modifications, enhancements
* questions, discussions, etc
* just plain operating old Yaesu stuff

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe fox_tango

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe fox_tango

To post items to the reflector, send email as follows:
TO: fox_tango@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Mobile-Portable is a mailing list (reflector) devoted to mobile
and portable operation of amateur radio (QRP and QRO, HF and VHF+):

* rigs, antennas, tuners
* installation
* batteries
* generators
* solar and alternative energy
* camping/RVs/backpacking
* laptop/palmtop computers
* portable packet
* roving and mountain-topping
* GPS, APRS

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe mobile-portable

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe mobile-portable

To post items to the reflector, send email as follows:
TO: mobile-portable@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

BitBucket is a mailing list (reflector) devoted to
specialized amateur radio communication techniques.

-SSTV, ATV, FAX, APT, DSP, QRP, APRS
-Packet, Pactor, GTOR, Clover, AMTOR, RTTY
-R/C, Telemetry, Balloons, Rockets, Robotics
-homebrew, modifications, interfacing, widgets, etc

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle used to catch bits when they fall off the end of a register during a shift instruction). Discarded, lost, or destroyed data is said to have `gone to the bit bucket'. On Unix, often used for /dev/null. Sometimes amplified as `the Great Bit Bucket in the Sky'.

2. The place where all lost mail and news messages eventually go. The selection is performed according to Finagle's Law; important mail is much more likely to end up in the bit bucket than junk mail, which has an almost 100% probability of getting delivered. Routing to the bit bucket is automatically performed by mail-transfer agents, news systems, and the lower layers of the network.

3. The ideal location for all unwanted mail responses: "Flames about this article to the bit bucket." Such a request is guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those figures last week; they must have landed in the bitbucket." Compare black hole.

This term is used purely in jest. It is based on the fanciful notion that bits are objects that are not destroyed but only misplaced. This appears to have been a mutation of an earlier term `bit box', about which the same legend was current; old-time hackers also report that trainees used to be told that when the CPU stored bits into memory it was actually pulling them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of the `parity preservation law', the number of 1 bits that go to the bit bucket must equal the number of 0 bits. Any imbalance results in bits filling up the bit bucket. A qualified computer technician can empty a full bit bucket as part of scheduled maintenance.

1760. Re: *** NEED HELP WITH AO21 AO27***

Newsgroup: rec.radio.amateur.space
Date: 1997-06-18 00:00:00 UTC
From: <>
Message-ID: <970518021424.tvr@mocha.ecofe.com>
Source record: 18718

The AO-27 transponder is working quite well but it may be turned off when it is over you. Due to power limitations it is only on during daylight hours when it is over North America. I do not know if it is on over Europe or the Middle East at all. If it is available you can ...

My understanding [see http://www.umbra.com for details] is that the coverage is worldwide, but only in latitudes corresponding approximately to those of the United Status and Canada. Current downlink is 436.792 and will drop further in future years as its transmit crystal ages.

Important: Please listen first before transmitting on AO-27. It has a sensitive receiver and unless you have a pre-amp, AO-27 will hear you long before you hear it. At least over North America, there is almost always activity on daylight passes, so please wait until you're sure you'll be able to copy callsigns before transmitting. Be brief; in the States and Canada, just give your callsign and perhaps your grid square, and one of the regulars will come back to you, especially if you have an uncommon grid square.

-- KD6PAG (networking old-timer, RF newbie)

[n.b. I try to keep its status on http://www.alive.com/~tvr/KD6PAG/AO-27.html]

1761. new Mir frequencies

Newsgroup: rec.radio.amateur.space
Date: 1997-06-18 00:00:00 UTC

SB SAT @ AMSAT $ANS-166.01
MIREX INFO/MIR FREQ. CHANGE

HR AMSAT NEWS SERVICE BULLETIN 166.01 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 15, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-166.01

To: Amateur Radio Stations
From: MIREX Mir International Amateur Radio Experiment
Subject: Mir Frequency change experiment
Date: June 13, 1997

A frequency change experiment is tentatively scheduled to take place the weekend of June 15th at 1200 UTC with the 2-meter station on board the Mir Space Station. The duration of the experiment has not been finalized, we would like your inputs on the results. The MIREX team has received numerous complaints from around the world, stating the existing Mir 2-meter channels are not usable. In November 1996 Mir changed from the successful channel 145.550 simplex to a 145.200/800 split frequency. This combination of channels (145.200/800) does not work very well for most parts of the world. In many countries the 145.200 is used for repeater Outputs or Inputs. The 145.790 channel is in use by many semi-permanent packet operations. The new temporary frequency which MIREX has requested is 145.985 Simplex. All operations, Voice and Packet will be on 145.985 Simplex. This frequency was chosen for three primary reasons. First it complies with the ITU International Band plan for Satellite operations. Second, It gets Mir away from most of the terrestrial based interference. Third, The Mir 2-meter station is desensed by commercial VHF activities on board Mir (in the 143 MHz range).

Stations are encouraged to listen to the Mir activities on the newchannel and send your Signal and Interference reports to the CEO of MIREX, Dave Larsen. It is very important to participate and send reports. This is an opportunity to provide useful input.
Address:
E-mail doc @ volcano.net
Packet n6co @ N0ARY.#NOCAL.CA.USA.NOAM
Postal N6CO POB1501 PINE GROVE CA 95665

Please do not send Signals reports via the Mir PMS mail box. And do not bother the Mir crew members about the frequency change. This frequency experiment is solely the responsibility of the MIREX Working Group. The MIREX Working Group would like the thank all of the people involved with assisting in this information gathering experiment, including the Mir 23 Crew members and the Chief of Cosmonaut Amateur Radio Department RSC.

Suggested Report format: (pre-amps turned off, state antenna style, then describe interference if any)
Elevation Degrees / S-Unit
5 5
10 9
30 +10
50 +20
30 8
10 6
5 2

/EX

notes - the change has taken place and Mir has been heard on both voice and packet on the new frequency.

is published every week and is made available for non-commercial use.

* P3D ENGINEERING SOFTWARE NEWS *
================================
Regular users of FO-20 may have been puzzled by a strange buzzing sound on
its mode JA transponder over the last couple of weeks. This was due to
command stations testing the new P3D Range Determination software and
hardware.

P3D's orbit will change significantly after motor firings, and NORAD will
lose track of us. So would we! The P3 ranging system enables our world
wide network of Command Stations to measure distance to the satellite from
different locations and at different times and so compute the new orbit's
Keplerian elements. This information is used by us, the AMSAT community,
and of course given back to NORAD so that they can re-acquire our satellite
by radar. This methodology was used to remarkable effect in picking up
OSCAR-13 after both its motor firings.

Back in 1988, the P3C engineering software was still based on the Atari-800XL
computer. This was a legacy from the very successful designs originating as
far back as 1979 and the ill-fated P3A satellite (1981).

However, the prospect of working on P3D yet again using a dual audio cassettes
for storage and 8-bit 2 MHz processors has never been very attractive, and a
re-engineering of many of the tools has been undertaken by James Miller G3RUH
over the last couple of years.

The P3 Range Determination package marks the successful completion of a
substantial development programme that includes the following principal
packages:

- Tracking
- Telemetry Display
- Command Uploader

- IPS-X1802
- Ranging
- OrbitFit

Tracking of course needs no introduction.

Telemetry Display is essentially as already available for AO-13, but with P3D specific changes. This will be publicly released for several platforms when P3D is finally "nailed down".

Command Upload software is used for commanding the spacecraft both during lab-testing and in space. These first three packages were used for AO-13.

P3D, like its predecessors, has a flight computer based on a radiation hardened CDP-1802 microprocessor. It runs an operating system called IPS. But generation of the flight operating system and on-board control software is done on a ground-based host computer. The IPS-X1802 package is, as its name suggests, a cross compiler.

Source files for P3D are written using the IPS language. They are compiled by the IPS-X1802 development system (itself written in IPS) which outputs a target binary in 1802 machine code. In the days of P3A/B/C, this compilation used to take half an hour on the Atari-800XL. Imagine how tedious a simple edit used to be. Flight software compilation, from source files to uploadable binary, now takes half a second.

The IPS-X1802 cross-compiler is a major part of the P3D development programme. Without it, the flight software which controls the spacecraft, and is much different than that of P3A/B/C, would be impossible to produce efficiently in the short timescales left to us.

The Ranging software, mentioned earlier, measures range to the satellite with a basic accuracy of about 150m (1 microsecond). Comparison of ranges measured via FO-20, with ranges displayed by regular tracking programs, shows agreement within 5 km, often better. During tests, signal strengths have been kept to the absolute minimum needed for "lock", and are weaker than AO-13's general beacon used to be. The uplink power to FO-20 is typically under 1 watt to a KLM14C antenna, rather less than a typical SSB user's. The ranging software can track down to a level where the signal is virtually inaudible. Sample GIF (5 kbytes) taken during an FO-20 pass is at:

http://www.jrmiller.demon.co.uk/IPS/range.gif

The final program OrbitFit takes range measurements from the network of command stations, and computes an orbit that best fits the data. It was written 10 years ago by Stefan Eckart DL2MDL, and has been adapted for our current needs by G3RUH. Tests processing FO-20 ranging data have been completely successful.

Software is written in BASIC and ARM assembler for the Acorn Risc Computer. Current machines use the DEC SA-110 processor at typically 200 MHz/700 mW/$50, representing the highest MIPs/mW and MIPs/$$ (taken together) in the business and currently the embedded systems processor of choice. It makes a cool

personal computer too.

Acorn Risc Computer:
http://www.acorn.co.uk/acorn/products/strongarm/

DEC SA-110 information:
http://www.europe.digital.com/info/semiconductor/sa110.htm

Software is not as photogenic or as sexy as hardware, and thus gets little or no exposure. Yet it is hoped that this short precis provides a better understanding of how the backroom boys have been keeping busy. There are many such heroes in the P3D program, but special recognition is given to P3 command stations Peter Guelzow DB2OS, Graham Ratcliff VK5AGR, Stacey Mills W4SM and Ian Ashley ZL1AOX for enthusiastically thrashing every development as it has staggered off the production line.

Notes by James Miller G3RUH
1997 Jun 10 [Tue] 0653 UTC

* SAFEX IS BACK ON *
==========
The following notice was posted to the packet radio BBS on the Mir space station by Mike Foale, KB5UAC, and was downloaded by Miles Mann:

Stat : PR
Posted : 06/07/97 13:10
To : ALL
From : R0MIR

@ BBS :

BID :
Subject: SAFEX is ON

Turning SAFEX II on today. Repeater mode tx 437.950, rx 435.750 ctcss 141.3. SAFEX is turned off during all joint ops missions with soyuz, shuttle because of interference.

Mike kb5uac

BJ Arts, WT0N, reports the Mir 70 cm repeater is up and running, and several stations were worked during the 0030 UTC pass on June 8th. Strong downlink signals were reported while Mir was over north America. BJ's uplink was 435.750 MHz FM, while he received downlinks on 437.950 MHz. A CTCSS tone of 141.3 Hz is required for access.

* SCOPE NEWS *
==========
A brief description of the SCOPE project is now available in Japanese and English. The SCOPE Home Page is located at:

http://www.jamsat.or.jp/scope/

SCOPE is an experiment flying on the Phase 3D satellite that will provide images of celestial objects through the use of a CCD imaging camera.

[Info via Tak Okamoto and the JAMSAT SCOPE Project Team]

* STS-94 ORBITAL DATA *
=======================
STS-94 Nominal orbital data is now available on the AMSAT Web Page. The time-independent State Vector and the Keplerian elements corresponding to the scheduled launch time of 01-JUL-97 / 18:37 UTC are available at:

http://www.amsat.org/amsat/sarex/orbit.html

The full set of nominal state vectors and mission profile schedule is also available on the AMSAT Web page at:

http://www.amsat.org/amsat/sarex/vectors.html

As in the past, updates will be made to the AMSAT Web page using actual orbital data during the mission.

E-Mail updates are no longer made to the SAREX mailing list during the mission. These updates were discontinued when NASA Spacelink began sponsoring a mailing list called *STSTLE* for this specific purpose. Subscriptions to STSTLE are available on request. To subscribe send a E-Mail message to the following address:

listproc@spacelink.msfc.nasa.gov

The text of the mail message should be as follows:

subscribe STSTLE FirstName LastName

Where "FirstName" and "LastName" provide the list manager with your name.

Those considering subscribing to STSTLE should be cautioned that the list typically provides three to four updates per day on the Shuttle (and also for any satellites deployed by the Shuttle). The frequency of updates ensures current data for several NASA agencies that subscribe to this mailing list. If this many updates are undesirable, you should get your Keplerian elements from a different source.

I created one additional source for Shuttle orbital data. In some high-interest SAREX missions, I received E-Mail messages from individuals having difficulty accessing the AMSAT Shuttle Orbital Data Web page. These individuals did not want to subscribe to STSTLE because of the frequency of updates. Therefore, I provide a backup source of a current STSTLE update message on my personal Web page. This page may be accessed at:

http://www.mindspring.com/~n2wwd

Because of the workload in providing updates to both the AMSAT Web page and the STSTLE mailing list, my personal Web page is sometimes only updated with the STSTLE message at ~13:00 UTC and ~20:00 UTC during the missions. Thus, the AMSAT page is the primary data source on the World Wide Web.

Ken Ernandes, N2WWD
n2wwd@amsat.org

* KF0JT SILENT KEY *
====================
It is with sadness that the death of Dennis Caton, KF0JT, author of UP/DOWN is reported. Dennis lost a three year battle with cancer June 4 at his home near Colorado Springs. He was a native of England and is survived by his wife and two grown children. Dennis was a long time supporter of AMSAT and satellite projects. For a time he was AMSAT's coordinator for activities at the Air Force Academy. When he hit upon the idea for the UP/DOWN program he was delighted to have found a way to contribute to AMSAT and satellite operations. A service was held at Our Lady of The Pines in Black Forest, Colorado on June 11. Messages may be sent to Jim White, WD0E (wd0e@amsat.org) for forwarding to the family.

Jim White

Manos,

As I recall from trying to use my PK-232, it drops two of every three lines
when receiving the regular WEFAX. Different software won't help unless you
can modify the firmware in the actual box. The CPU is a Z-80.

I gave up on mine and decided to buy the AEA Fax-III unit with software.
It works somewhat better although not as well as some of the DSP units.

ONLY AVAILABLE IN THE:
U.S.A, CANADA VIRGIN ISLANDS, AND PUERTO RICO

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax, pager, voice-mail, and cellular numbers and give them your New "Virtual Office" 800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone? Wouldn't it be nice to be able to give everyone just ONE phone number that will find you anywhere you are? Even out of town, or in a restaurant, or even on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving, Even without a fax machine! E-Mail Notification and Delivery, Without a PC!, Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888 Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial, Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection, Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web sight:
http://www.mynumber.com

* Based on our best priced plan.

QST de W1AW
Space Bulletin 018 ARLS018
From ARRL Headquarters
Newington, CT June 19, 1997
To all radio amateurs

SB SPACE ARL ARLS018
ARLS018 Phase 3D delayed

AMSAT Phase 3D officials remain optimistic despite another delay in the launch of the Ariane 502 that is scheduled to carry Phase 3D aloft in mid-September. The European Space Agency, ESA, announced this week that the Ariane 502 launch will be delayed a couple of weeks until September 30 at the earliest while the rocket gets another engine. It's the second delay announced this year for the Phase 3D vehicle. In March, the launch date was moved from early July to mid-September. AMSAT-NA President Bill Tynan, W3XO, remains philosophical about the schedule changes. ''It's more of the same,'' he said. ''We're trying to use all the time they give us productively.''

Orbital Report On-Line said this week that a faulty component was detected in the liquid oxygen turbopump of the Vulcain engine due to fly on Ariane 504. Since the origin of the flaw was identified as a possible production defect and a similar element is known to be in the pump of the engine already mounted on the Ariane 502 rocket that recently arrived in Kourou, French Guyana, the European Space Agency and the launch consortium (CNES) have decided to remove the engine and replace it with the one originally scheduled for Ariane 503, which features a component from an older production batch.

Any delay increases the overall cost of the project, but Tynan characterized the additional cost factor of the most recent delay as ''noise level.'' He did not have a precise cost estimate. Tynan, who was at the Phase 3D Integration Lab in Orlando, Florida, said everything is going along well in the process. ''The RF equipment integrated fine,'' he noted.

For more information on Phase 3D, including pictures of the assembly and integration process, see http://www.amsat.org/amsat/sats/phase3d.html.

ARLS019 Mir frequency test

ZCZC AS19
QST de W1AW
Space Bulletin 019 ARLS019
From ARRL Headquarters
Newington, CT June 19, 1997
To all radio amateurs

SB SPACE ARL ARLS019
ARLS019 Mir frequency test

For the third time in less than a year, the Mir FM voice and packet frequency changed again June 15. But even as it was made, the switch to 145.985 MHz simplex was being called ''tentative'' and ''experimental.'' It also was controversial. As a result, Mir officially will end the worldwide ''experiment'' on 145.985 MHz as of June 23, but leave the frequency available as an option to the Mir crew only while Mir is over the US. Mir packet sysop Miles Mann, WF1F, said US astronaut Mike Foale, KB5UAC, now aboard Mir, can use ''any channel he wants'' when he's over the US, including 145.985, but he has to switch to 145.200/800 when Mir is elsewhere. Also, the radio will remain on the split pair when the crew is sleeping. The new frequency may be used for both voice and packet operation.

The Mir International Amateur Radio Experiment--MIREX--cited ''numerous complaints from around the world'' that the 145.200/800 split-frequency combination did not work very well as the main reason for trying 145.985. Last November, Mir changed from 145.550 MHz simplex to the split-frequency pair. ''The radio has been almost impossible to use since November 1,'' said Mann, who called 145.985 MHz ''an excellent compromise.''

In a posting to the AMSAT bulletin board, John O'Hara, KB8TJX, in Wellsville, Ohio, reports he worked KB5UAC aboard Mir on 145.985 MHz for several minutes right after the changeover. ''Mike said that it was working out a lot better for him also. He said he had trouble sorting out the voice contacts from the packet and that the duplex was also confusing to him,'' said O'Hara, who's AMSAT coordinator for Eastern Ohio, Western Pennsylvania and the northern panhandle of West Virginia.

When the ''experiment'' was announced, Mann had expressed the hope that if the 145.985 MHz channel worked much better, the Mir crew

might be more inclined to get on the air than previously. Mann said the 145.800/200 MHz split-frequency operation suffered from interference from terrestrial users and drew widespread complaints from hams in the US, Japan and Australia (145.200 MHz is a repeater output or input frequency in many countries). He said the new frequency complies with the IARU band plan for satellite operation and will reduce desensing of Mir's 2-meter station by commercial VHF activities taking place aboard spacecraft in the 143-MHz range. Mann said MIREX is working on a fix for the desensing problem, and hopes to have it in operation by this fall.

A return to the 145.55 MHz frequency used previously by Mir was rejected because it's too close to a popular simplex frequency in Europe. Switching to 145.79 MHz also was out because it's in use by many semi-permanent packet operations.

Equipment aboard Mir includes a Kenwood TM-733, a PacComm Handi-Packet modem, a dual-band antenna, and a new, huskier power supply capable of powering the TM-733 to its full 50 W output. Mann said the output power typically is 10 W, however.

MIREX requests reports on the 145.985 MHz channel. Signal and interference reports go to Dave Larsen, N6CO, Box 1501, Pine Grove, CA 95665; e-mail doc@volcano.net.

From: Scott <stengen@tengen.com>
Message-ID: <01bc7cb7$f3a3f800$51f94ecf@one>
Source record: 18646

I would like to know what antenna configuration would a) work and b) be ideal to work these birds and others including 3d when it gets up.

A few basic questions to start.
1) Do I need a circular polarized antenna?
2) Can I use a small 70cm & 2m Yagi?
3) How about a dual bander vertical with low horizontal gain?
4) What about preamps - is one at the antenna I can't tx from better then one built into an external peramp/amplifier combo? - Or do I need them at all...

Thanks in advance!

Scott, KC8GXR@Tengen.com

Try Logsat. Don't know how "crippled" the current demo is but an
older version might be better. Its worth paying for.

ARIANE 502 FLIGHT UPDATE

HR AMSAT NEWS SERVICE BULLETIN 173.01 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-173.01

In a Joint ESA/CNES press release it has been announced that the Ariane 502 launch campaign has begun. The joint statement issued by ESA/CNES is quoted as follows, exactly as received:

"The Director General of the European Space Agency (ESA) and the Chairman of the Centre National d'Etudes Spatiales (CNES, the French space agency), acting on the recommendation made following the Flight Readiness Review held on 5 and 6 June, have given the go-ahead for the Ariane 502 flight launch campaign to start today, 16 June, at the Guiana Space Centre, Europe's spaceport at Kourou in French Guiana. This decision follows detailed reviews conducted over the past few months on the launch vehicle itself and the corresponding ground facilities (see ESA/CNES release of 24 March).

Over the next few weeks, mechanical, fluid and electrical integration of the cryogenic main stage, the solid booster stage, the vehicle equipment bay and the upper stage of the launcher will be proceeding in the Launcher Integration Building, while preparatory work will be under way in the Final Assembly Building on the upper composite: the Speltra, the fairing and the payload made up of two technological instrument platforms, Maqsat H and B and two satellites: Teamsat (a satellite flying five European technology experiments and Amsat P3D (an international radio amateur satellite). Meanwhile, various tests, flight program functional simulations in particular, will be continuing in Europe.

These various operations are planned to lead to integration of the upper composite and filling of the upper stage and the attitude control system with propellant, the target date for the

Ariane 502 flight now being set as from the end of September
this year."

[ANS thanks ESA and CNES for this information.]

SB SAT @ AMSAT $ANS-173.02
MIR FREQ. CHANGE

HR AMSAT NEWS SERVICE BULLETIN 173.02 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-173.02

For the third time in less than a year, the Mir FM voice and packet frequency changed again June 15. But even as it was made, the switch to 145.985 MHz simplex was being called tentative and experimental. It also was controversial. As a result, Mir officially will end the worldwide experiment on 145.985 MHz as of June 23, but leave the frequency available as an option to the Mir crew only while Mir is over the US. Mir packet sysop Miles Mann, WF1F, said US astronaut Mike Foale, KB5UAC, now aboard Mir, can use "any channel he wants" when he's over the US, including 145.985, but he has to switch to 145.200/800 when Mir is elsewhere. Also, the radio will remain on the split pair when the crew is sleeping. The new frequency may be used for both voice and packet operation.

The Mir International Amateur Radio Experiment--MIREX--cited "numerous complaints from around the world" that the 145.200/800 split-frequency combination did not work very well as the main reason for trying 145.985. Last November, Mir changed from 145.550 MHz simplex to the split-frequency pair. "The radio has been almost impossible to use since November 1," said Mann, who called 145.985 MHz "an excellent compromise."

In a posting to the AMSAT bulletin board, John O'Hara, KB8TJX, in Wellsville, Ohio, reports he worked KB5UAC aboard Mir on 145.985 MHz for several minutes right after the changeover. "Mike said that it was working out a lot better for him also. He said he had trouble sorting out the voice contacts from the packet and that the duplex was also confusing to him," said O'Hara, who's AMSAT coordinator for Eastern Ohio, Western Pennsylvania and the northern panhandle of West Virginia.

When the "experiment" was announced, Mann had expressed the hope that if the 145.985 MHz channel worked much better, the Mir crew might be more inclined to get on the air than previously. Mann said the 145.800/200 MHz split-frequency operation suffered from interference from terrestrial users and drew widespread complaints from hams in the US, Japan and Australia (145.200 MHz is a repeater output or input frequency in many countries). He said the new

frequency complies with the IARU band plan for satellite operation and will reduce desensing of Mir's 2-meter station by commercial VHF activities taking place aboard spacecraft in the 143-MHz range. Mann said MIREX is working on a fix for the desensing problem, and hopes to have it in operation by this fall.

A return to the 145.55 MHz frequency used previously by Mir was rejected because it's too close to a popular simplex frequency in Europe. Switching to 145.79 MHz also was out because it's in use by many semi-permanent packet operations.

Equipment aboard Mir includes a Kenwood TM-733, a PacComm Handi-Packet modem, a dual-band antenna, and a new, huskier power supply capable of powering the TM-733 to its full 50 W output. Mann said the output power typically is 10 W, however.

MIREX requests reports on the 145.985 MHz channel. Signal and interference reports go to Dave Larsen, N6CO, Box 1501, Pine Grove, CA 95665; e-mail doc@volcano.net.

[ANS thanks the ARRL for this news on MIR.]

SB SAT @ AMSAT $ANS-173.03
P3D DELAY

HR AMSAT NEWS SERVICE BULLETIN 173.03 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-173.03

AMSAT Phase 3D officials remain optimistic despite another delay in the launch of the Ariane 502 that is scheduled to carry Phase 3D aloft in mid-September. The European Space Agency, ESA, announced this week that the Ariane 502 launch will be delayed a couple of weeks until September 30 at the earliest while the rocket gets another engine. It's the second delay announced this year for the Phase 3D vehicle. In March, the launch date was moved from early July to mid-September. AMSAT-NA President Bill Tynan, W3XO, remains philosophical about the schedule changes. ''It's more of the same,'' he said. ''We're trying to use all the time they give us productively.''

Orbital Report On-Line said this week that a faulty component was detected in the liquid oxygen turbopump of the Vulcain engine due to fly on Ariane 504. Since the origin of the flaw was identified as a possible production defect and a similar element is known to be in the pump of the engine already mounted on the Ariane 502 rocket that recently arrived in Kourou, French Guyana, the European Space Agency and the launch consortium (CNES) have decided to remove the engine and replace it with the one originally scheduled for Ariane 503, which features a component from an older production batch.

Any delay increases the overall cost of the project, but Tynan characterized the additional cost factor of the most recent delay as ''noise level.'' He did not have a precise cost estimate. Tynan, who was at the Phase 3D Integration Lab in Orlando, Florida, said everything is going along well in the process. ''The RF equipment integrated fine,'' he noted.

For more information on Phase 3D, including pictures of the assembly and integration process, see http://www.amsat.org/amsat/sats/phase3d.html.

[ANS thanks the ARRL for this report.]

SB SAT @ AMSAT $ANS-173.04
A0-10 UPDATE

HR AMSAT NEWS SERVICE BULLETIN 173.04 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-173.04

AO-10 is returning to active life. On June 17th, Dan James, KE0DH, in Minnesota and James O' Neill, WA7OPE, In Montana enjoyed an almost solid 1 hour contact, starting at 0420 UTC. The satellite was nearing perigee, moving southeast from out over the pacific. Both stations had ,at times, S-9 downlink signals. A slow, predictable QSB fade was observed, getting worse as AO-10 neared its lowest point. KE0DH was still able to hear his downlink as AO-10 approached only 4 degrees above his horizon. The following night KE0DH worked WA3JYM in Pennsylvania and W8LKX In Ohio under the same conditions.

Both WA7OPE and KE0DH enjoy similar working conditions, gain antennas on AZ/El mounts, with both stations running about 80 watts output on the 435 MHz uplink. Very little FM'ing was observed during the hour long QSO. KE0DH was able to reduce his output to under 25 watts and still achieve a Q5 downlink! Both Dan and Jim used the updated AO-10 information that Stacy Mills, W4SM, has posted on his Internet web site to predict how AO-10 would respond before setting up the scheduled contact.

[ANS thanks James O' Neill ,WA7OPE, and Dan James, KE0DH, for this information]

SB SAT @ AMSAT $ANS-173.07
MORE SPUTNIK-1

HR AMSAT NEWS SERVICE BULLETIN 173.07 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-173.07

For the 40th anniversary of the launching of SPUTNIK-1 and the beginning of the space Conquest, l'Aeroclub of France and Russian Astronautical Federation are associated to commemorate this event. Last February 20th, during a conference, they were god fathers for the signature of the protocol of action between the radioclub, FR5KJ, of Jules Reydellet College in St Denis Reunion Island and the Polytechnic Laboratory of Nalchik Kabardine Balkar Republique (Russian Federation) The goal of the Project is to interest as many young people as possible in space matters, leading to an extraordinary realization and maybe to get a job in this field. The pupils from the two schools are working on a SPUTNIK 1 miniature satellite which will be able to work in space, when it will be hand thrown by a cosmonaut from the MIR orbital station.

The Russians will build the satellite body in which will be placed the transmitter made by the French pupils It will emit a "bip, bip" (sound track38 ko) on the 2 meters band starting October the 4th, 1997. During one month, every VHF equipped amateur radio station in the world will be able to receive the signal emitted from the miniature satellite .

[ANS thanks Philippe Mondon, FR5DN, for this news.]

WEEKLY SATELLITE REPORT PT 1

HR AMSAT NEWS SERVICE BULLETIN 173.08 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 22, 1997
TO ALL RADIO AMATEURS BT
BID: $ANS-173.08

MIR:
(All operations, Voice and Packet will be on 145.985 MHz, Simplex FM until June 23rd, 1997.)
Mir officially will end the worldwide experiment on 145.985 MHz as of June 23, but leave the frequency available as an option to the Mir crew only while Mir is over the US. Mir packet sysop Miles Mann, WF1F, said US astronaut Mike Foale, KB5UAC, now aboard Mir, can use "any channel he wants" when he's over the US, including 145.985, but he has to switch to 145.200/800 when Mir is elsewhere.

SAFEX, MIR 70cm Repeater
(Uplink 435.750 MHz FM, Downlink 437.950 MHz FM,
Subaudible tone 141.3 Hz)
Mike Seguin, N1JEZ, finally had some time to work a pass of the MIR /SAFEX repeater on the evening 6/21/97 @ 2223 UTC over Vermont. Mike reports he couldn't key up the repeater, and he also heard nothing on the downlink. He quickly tuned down to the Digitalker freq. 437.925 +/- doppler. There N1JEZ heard a message from Mike Foale, KB5UAC, about the Space Festival and the Student Model Rocket contest. The message repeats every few minutes.

RS-10
(Uplink 145.865-145.905 MHz CW/SSB, Downlink 29.36-29.4 MHz CW/SSB)

RS-10 Still silent.
RS3A needs some SWL reports of RS-10.
What time you heard RS-10, and also the date.
Send info via packet to Andy, .RS3A.
Packet: RK3KPK@RA3KP.MSK.RUS.EU

RS-12
(Uplink 21.21-21.25 MHz CW/SSB, Downlink 29.41-29.45 MHz or
145.91-145.95 Mhz CW/SSB)
Signals on RS-12 in North America during May and June (almost
exclusively daylight passes) are weakened by increased ionospheric
activity which is keeping 15m active during the daylight hours.
This makes it especially important for the 'old timers' to warn the
newcomers on RS-12 to set their uplink frequency and leave it alone to
prevent sweeping across the 15m band and QRM-ing the terrestrial QSOs
in progress
[ANS thanks Dick Montgomery, N3DV, for this update.]

RS-15
(Uplink 145.858-145.898 MHz CW/SSB, Downlink 29.354-29.394 MHz CW/SSB)
WT0N reports that downlink signals are still weak from RS-15,
but the bird is still workable.
(Hint: If SSB doesn't work for you, try CW. CW is very easy
to hear on the downlink!)

RS-16
RS-16's 435.504 MHz beacon is active. Also,
the 29.408 MHz beacon is reported as being heard.
No transponder activity yet.
70cm beacon =RS16 ZEAA ZEJA ZEAA(AA is sent as one
characrer);P163,o0,n0,m0,l0,k7,j5,i7,h49,g0,f159,e8,d6,c8,b11,a7.

Transponder information on RS-16.
Uplink = 145.915 - 145.948 MHz
Downlink = 29.415 - 29.448 MHz
Beacons = 29.408 , 29.451 MHz
Pwr 29 MHz Down = 1.2 W /4 W

Beacon 1 = 435.504 MHz
Beacon 2 = 435.548 MHz
Pwr 435 MHz Beacons = 1.6 W
[ANS thanks Bernie Hall, WY4D, for this report..]

FO-20
(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9
MHz CW/USB)
Operating normally. Strong downlink signal. Very busy
during passes over North America. Please remember to adjust the
higher frequency for doppler when the bird is in analog, JA, mode.
This means adjust the 70 cm frequency, the downlink, for doppler
shift. You do not have to adjust the 2 meter frequency, the uplink,
for doppler.

KO-23
(Uplink 145.85, 145.9 MHz FM, Downlink 435.175 MHz FM,
9600 Baud FSK.)
KO-23 operating normally.
.

(Uplink 145.9-146.0 MHz CW/LSB, Downlink 435.8-435.9 MHz CW/USB)
Digital
(Uplink 145.85, 145.87, 145.910 MHz FM, Downlink 435.910 MHz FM 9600 baud
BPSK)
Please remember to adjust the higher frequency for doppler when the bird
is in analog, JA, mode. This means adjust the 70 cm frequency, the
downlink, for doppler shift. You do not have to adjust the 2 meter
frequency, the uplink, for doppler.

The latest FO-29 Schedule can be found at.

SB SAT @ AMSAT $ANS-173.09
WEEKLY SATELLITE REPORT PT 2

HR AMSAT NEWS SERVICE BULLETIN 173.09 FROM AMSAT HQ
SILVER SPRING, MD, JUNE 22, 1997

TO ALL RADIO AMATEURS BT
BID: $ANS-173.09

AO-10
(Uplink 435.030-435.18 MHz CW/LSB, Downlink 145.975-145.825 MHz
CW/USB)
Operational.
Many QSO's heard as when the bird was in view from
north America. WT0N reports some slight FM'ing on the downlink..

OSCAR-11
(Downlink 145.825 MHz. FM, 1200 Baud PSK. Beacon 2401.500 MHz..)
Operating normally.
Telemetry nominal. The battery voltage has recently improved to
around 13.9 volts, and the internal temperatures have continued to
fall, due to solar eclipses. The battery temperature is now 4
degrees C, or 18 degree below the full sunlight condition.

The operating schedule is unchanged.
ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

[ANS thanks Clive Wallis, G3CWV, for this information.]

AMSAT-OSCAR-16 (PACSAT)
(Uplink 145.9, 145.92, 145.94, 145.86 MHz FM, 1200 bps Manchester FSK
Downlink 437.0513 MHz SSB, 1200 bps RC-BPSK 1200 Baud PSK.
Beacon 2401.1428 Mhz.)
Operational.
Telemetry data received from AO-16
uptime is 1007/06:01:17. Time is Sat Jun 21 11:26:27 1997
RC PSK TX Out= 0.428 W
Total Array C= 0.256 Bat Ch Cur=-0.009 Ifb= 0.054 I+10V= 0.266
TX:010B BCR:83 PWRC:59E BT:3C WC:25 EDAC:93

Graphic information about WOD/Telemetry values can be found at:
http://www.arrakis.es/~ea1bcu/wod.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

DO-17(DOVE)
(Downlink 145.825 MHz FM, 1200 Baud AFSK.
Beacon 2401.220 MHz.)
No report available.

WEBERSAT (WO-18)
(Downlink 437.104 MHz SSB, 1200 Baud PSK AX.25.)
No report available.

LUSAT-OSCAR-19
(Uplink 1200 bps Manchester FSK Uplinks:
145.84, 145.86, 145.88, 145.9 MHz FM, Downlink 437.125 MHz SSB,
1200 bps RC-BPSK.)
Operational.
Telemetry data received from LO-19:
uptime is 731/21:48:59. Time is Sat Jun 21 11:54:09 1997
RC PSK TX Out= 0.534 W
Total Array C= 0.268 Bat Ch Cur= 0.137 Ifb= 0.035 I+10V= 0.079
TX:016 BCR:80 PWRC:36E BT:3C WC: 0
NOTE: Add 6.83 minutes to the clock of the satellite.
Graphic and general information about Telemetry values can be found at:
http://www.arrakis.es/~ea1bcu/lo19.htm
[ANS thanks Miguel A. Menendez, EA1BCU, for this report.]

UO-22:
(Uplink: 145.9 or 145.975 MHz FM. Downlink 435.120 MHz FM
9600 Baud FSK.)
A problem with UO-22 seems to be related to the software changes that
were made last week prior to the last flight software reload. During
the last pass over Surrey on Saturday morning, June 7th, Chris Jackson
closed the spacecraft store and forward communications system for general
use to allow him to diagnose the problem..
[ANS thanks Chris Jackson, G7UPN / ZL2TPO,
Groundstation and Operations Manager, for this report.]

IO-26 (ITAMSAT)
(Uplink 145.875, 145.9, 145.925, 145.95MHz FM, Downlink 435.822 MHz SSB,
1200 Baud PSK.)
IO-26 controllers report that the spacecraft is now in IHT mode. The new
ROBOT software is under currently undergoing tests. The beacon reports
that the digipeater is OFF and that the ROBOT is undergoing tests.
Controllers ask that groundstations please do not transmit on any of
the satellite's uplink frequencies for the time being.
[ANS thanks Daniele Piercarlo, IK2XRO, ITMSAT Command Station for this
report.]

From: mbv@ti.com
Message-ID: <5omj15$6b9$1@tilde.csc.ti.com>
Source record: 18671

In article <$arls018.1997@arrl.org>, w1aw@arrl.org says...
>
>>.........
>Orbital Report On-Line said this week that a faulty component was
>detected in the liquid oxygen turbopump of the Vulcain engine due to
>fly on Ariane 504. Since the origin of the flaw was identified as a
>possible production defect and a similar element is known to be in
>the pump of the engine already mounted on the Ariane 502 rocket that
>recently arrived in Kourou, French Guyana, the European Space Agency
>and the launch consortium (CNES) have decided to remove the engine
>and replace it with the one originally scheduled for Ariane 503,
>which features a component from an older production batch.
>~~~~~~
It seems that a clarification of "production defect" is in order
here. Can we get more details? "Similar element" needs some further
description too.

Ken Durham K5MBV

1812. SETI League Pres. on Radio Show

Newsgroup: rec.radio.amateur.space
Date: 1997-06-23 00:00:00 UTC
From: lenwink@goodnet.com
Message-ID: <5on0unaaq1@news.goodnet.com>
Source record: 18672
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.radio.shortwave,rec.radio.amateur.space,alt.ufo.reports

This sunday, June 29, 1997, Dr. H. Paul Shuch, N6TX, from the
Amateur SETI League, will be the special guest on the Ham Radio
& More Show. Don't miss this opportunity to find out what's going
on with SETI, special projects in the works, how you can join, info
on the upcoming movie-Contact, and we'll even get to hear Dr. Shuch
do some of his world famous singing about SETI.
The Ham Radio & More Show air live exclusively on WWCR, 5.070mhz,
every sunday at 6:00pm ET, 2200utc. More info is below or check out
the home page.

Uplink 435.750 FM subaudible tone 141.3
Downlink 437.950 FM

SAREX Simplex (Space Shuttle)*
Uplink 144.910, 144.93, 144.95 144.97 or 144.99 FM
(Europe Only) Uplink 144.70, 144.75, or 144.80 MHz
(Worldwide) Downlink 145.55 FM

-------------------------------------------------------------------------------
* Amsat Oscar-10 has been reported to have an FMing signal. Please do not
use the satellite if the beacon frequency wavers, or if downlink signals
```

chirp, warble, or drift irregularly. Such FMing occurs when sunlight strikes the satellite's solar cells at an unfavorable angle, resulting in insufficient power to the electronics. AO-10's batteries are dead, so the satellite shuts down during periods of eclipse.

* Radio Sport-10's beacon, ROBOT and transponder remain silent while designer and builder Andy Papkov carries out experimental work with the satellite from the RS3A command station. Leonid Labutin UA3CR reports that it is hoped that RS-10 will be active again soon, long before it's tenth birthday.

* Radio Sport-15 has battery charging problems therefore the transponder and beacon are silent when the satellite is in darkness. CW is the most effective mode for using this satellite. Where six months back RS-15 was self-switching all it's systems off soon after entering eclipse, then two months ago continuing to function well into shadow, RS-15's transponder and beacon is now switching off even when under solar cell battery charge in daylight. This effect is evidenced whenever high power uplink stations come up on the transponder. The satellite normally recovers within a few seconds, only to switch off again when the QRO operator(s) re-appear. The lesson to be learned is for users to improve their downlink reception, and NOT to increase their uplink power in order to hear (just) themselves. 100w erp is more than enough to produce an adequate signal from RS-15 on the single proviso that other users do not run more than this.

* Radio Sport-16 currently has its Mode A transponder turned off. Currently the 10M beacons are off but the 70cm beacons are on.

* Please note Amsat Oscar-27 has a very sensitive receiver, I have routinely uplinked to it with a handheld on low power. On the other hand reception of the 70cm downlink signal is more difficult without a directional antenna most of the time. Therefore it is important to make sure that you can hear the satellite downlink before you transmit therefor avoiding interfering with others already on this one channel satellite repeater.

Current AO-27 schedule information can be found at:

http://www.umbra.com

The Transmitter xtal is changing with time. From the first day AO-27 was in orbit the Transmit Frequency has been shifting lower. Many have not checked the zero doppler frequency closely enough to see that it is dropping. Every few months Michael Wyrick, N4USI, has to change a setting that moves the freq. a KHz or so up in freq. This setting only has a range of about 7 KHz total. This means that after a while Michael can't compensate for the change and has to reset the setting back to zero. This causes the frequency to drop about 7 KHz when he does this. There is no way around this and the Tx frequency will continue to drop as the xtal ages.

The satellite is coming up on the end of range for this setting and in several months the freq. will seem to drop again. If N4USI had not put the correction hardware on-board, you would see a continuous shift in tx frequency. AO-27 Will turn on Every pass 16 Minutes after entering the sun

and will stay on for 18 minutes. This corrects the early shut off that has been going on for the passed few weeks.

* Fuji-Oscar 20 can also be used in mode JD (D meaning Digital), at time of writing this satellite was reported to be in Analog mode until further notice.

* Fuji-Oscar 29 can also be used in mode JD (D meaning Digital),the following schedule is a guide to satellite Mode availability. This schedule has been known to be amended with little or no notice by the ground control station.

The latest FO-29 Schedule can be found at:

http://www.kt.rim.or.jp/~jr1nvu/eindex.html

June 13(Fri) 00:39z JD 1200bps PSK MailBox
20(Fri) 09:41z JD 9600bps FSK MailBox
27(Fri) 00:11z JA
July 4(Fri) 09:13z JD Digi-talker
8(Fri) 09:06z JA

* Mir Simplex - A frequency change experiment is taking place with the 2-meter station on board the Mir Space Station. The duration of the experiment has not been finalized, we would like your inputs on the results. The MIREX team has received numerous complaints from around the world, stating the existing Mir 2-meter channels are not usable. In November 1996 Mir changed from the successful channel 145.550 simplex to a 145.200/800 split frequency. This combination of channels (145.200/800) does not work very well for most parts of the world. In many countries the 145.200 is used for repeater Outputs or
Inputs. The 145.790 channel is in use by many semi-permanent packet operations. The new temporary frequency which MIREX has requested is 145.985 Simplex. All operations, Voice and Packet will be on 145.985 Simplex. This frequency was chosen for three primary reasons. First it complies with the ITU International Band plan for Satellite operations. Second, It gets Mir away from most of the terrestrial based interference. Third, The Mir 2-meter station is desensed by commercial VHF activities on board Mir (in the 143 MHz range).

Stations are encouraged to listen to the Mir activities on the new channel and send your Signal and Interference reports to the CEO of MIREX, Dave Larsen. It is very important to participate and send reports. This is

an opportunity to provide useful input.
Address:
E-mail doc @ volcano.net
Packet n6co @ N0ARY.#NOCAL.CA.USA.NOAM
Postal N6CO POB1501 PINE GROVE CA 95665

Please do not send Signals reports via the Mir PMS mail box. And do not bother the Mir crew members about the frequency change. This frequency experiment is solely the responsibility of the MIREX Working Group. The MIREX Working Group would like the thank all of the people involved with

assisting in this information gathering experiment, including the Mir 23 Crew members and the Chief of Cosmonaut Amateur Radio Department RSC.

Suggested Report format: (pre-amps turned off, state antenna style, then describe interference if any)
Elevation Degrees / S-Unit
5 5
10 9
30 +10
50 +20
30 8
10 6
5 2

* SAREX Mission STS-94 Nominal orbital data is now available on the AMSAT Web Page. The time-independent State Vector and the Keplerian elements corresponding to the scheduled launch time of 01-JUL-97 / 18:37 UTC are available at:

http://www.amsat.org/amsat/sarex/orbit.html

CREW MEMBERS with Amateur Radio call signs:
James D. Halsell, Commander, KC5RNI
Janice E. Voss, Payload Commander, KC5BTK
Donald A. Thomas, Mission Specialist, KC5FVF

During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. This crew will use KC5RNI, KC5BTK and KC5FVF on FM voice and W5RRR-1 on packet. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world. On many missions, they have even carried a 2-meter packet radio station. Innovative computer software allows the crew to operate the packet gear in an ''unattended'' mode, allowing amateurs to make contacts with the ROBOT station when the astronauts are working or sleeping.

The SAREX Working Group has designated the following frequencies during this mission. FM voice downlink (worldwide): 145.55 MHz; FM voice uplink (except Europe): 144.91, 144.93, 144.95, 144.97, and 144.99 MHz; FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz; FM packet downlink: 145.55 MHz; FM packet uplink: 144.49 MHz.

Hams should avoid transmitting on the shuttle's downlink frequencies. The uplink is your transmitting frequency. The crew will not favor any uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

QSLs go to ARRL EAD, STS-94 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information in your QSL or report: STS-94, date, time in UTC, frequency and mode (FM, voice or packet). You must also include a business-sized SASE.

Satellite Mode Descriptions for currently operational satellites:

Mode A: Uplink 2M
Linear Downlink 10M

Mode B: Uplink 70CM
Reverse Downlink 2M

Mode J: Uplink 2M
Reverse Downlink 70CM

Mode K: Uplink 15M

Mode T: Uplink 15M
Linear Downlink 2M

Special Event Station

From 21st June until 29th June a group of keen RS enthusiasts consisting
of G4CUO, G4ZHG, G0MKA, G7MUB, G8DYK and G0MKA will be celebrating the ten
years of faultless operation provided by the Russian RS-10 satellite.
They will be active with the callsign GB0RAS on all modes on each and every
pass of RS-10, RS-12, RS-15 and the Japanese FUJI satellites also. A serial
number will be given for all QSO's on each satellite, and a very special
QSL card will be sent to each station contacted or SWL report received.

This FAQ is being updated and re-released on a weekly basis on
or about Monday. Any constructive suggestions are always welcome.

1814. MCW for OSCAR?

Newsgroup: rec.radio.amateur.space
Date: 1997-06-24 00:00:00 UTC
From: timw@juno.COM
Message-ID: <19970624.115130.11263.0.TimW@juno.com>
Source record: 18575

Hello, all: is it possible to use a modulated continuous wave signal (MCW as described in this month's QST) with a handheld to work the OSCAR satellites as long as a proper receiver is used?

Thanks,
Tim, AB7LP
ab7lp@qsl.net

1820. MIR accident

Newsgroup: rec.radio.amateur.space
Date: 1997-06-25 00:00:00 UTC
From: BJ Arts <bjarts@the-bridge.net>
Message-ID: <01bc8169$ad8bc9e0$39280ace@home.the-bridge.net>
Source record: 18580

CAPE CANAVERAL, Florida (CNN) -- A Russian supply ship crashed into the space station Mir Wednesday during a test, causing one module to lose pressure, NASA said. The three men on board, including a U.S. astronaut, were reported to be safe.

The crew watched as the Progress ship, filled with garbage, moved toward the Mir and collided into a module during a test of the automated docking system, said NASA spokesman Rob Navias.

A solar panel on the module was damaged, and pressure began to drop inside. "It's heading toward zero," Navias said this morning.

The crew hurriedly sealed off the module to prevent a further drop in pressure in the rest of the sprawling station.

Correspondent John Holliman and The Associated Press contributed to this report.

SB SPACE ARL ARLS020
ARLS020 Mir crew safe after collision

The crew aboard the Mir space station--including US astronaut Mike Foale, KB5UAC and two Russian cosmonauts--was reported safe and in good shape today after an unmanned Progress M-34 cargo rocket struck Mir as the crew was trying to re-dock the rocket during a practice run. NASA spokesman Rob Navias says there are no plans to abandon Mir. A Soyuz spacecraft is docked at the station to provide an escape route.

Damage was confined to the Spektr module, which has been sealed off from the rest of Mir. That module reportedly contains the SAFEX 70 cm Amateur Radio repeater and most of the US experiments aboard Mir. NASA reports the crew is closely monitoring the damaged module.

According to VideoCosmos Co of Moscow and Novosti Kosmonavtiki magazine, the mishap occurred at approximately 0918 UTC. The cargo spacecraft sheared off half of a Spektr solar panel and damaged the module itself. The resulting leak caused the space station to begin to lose pressure, but the crew was able to rapidly close the hatch to the Spektr module and repressurize the unaffected compartments. The crash also damaged thermal control radiators on the Spektr module.

Vera Medvedkova, a spokeswoman for the Russian Mission Control Center near Moscow, said that at the time of the crash, the crew was using manual control to practice docking the Progress rocket. The crew had released the trash-filled rocket Tuesday and was attempting to re-dock it. Russian space officials now are figuring out how to fix the damaged Spektr module and what to do with the cargo ship, which continues to orbit Earth near the space station. NASA says it's working closely with the Russian flight team to determine the appropriate action.

In addition to Foale, the Mir is staffed by Russian cosmonauts Vasily Tsibliyev and Alexander Lazutkin. Foale has been aboard Mir since mid-May, when he replaced Jerry Linenger, KC5HBR. Linenger had his share of problems during his four-month stay on Mir, including a fire and coolant-system leaks.

ARLS021 Mir update

ZCZC AS21
QST de W1AW
Space Bulletin 021 ARLS021
From ARRL Headquarters
Newington, CT June 25, 1997
To all radio amateurs

SB SPACE ARL ARLS021
ARLS021 Mir update

Ham-astronaut and former Mir crew member Jerry Linenger, KC5HBR, told reporters today (June 25) that the crew aboard the Russian space station has had to ''power everything down that's possible,'' including some life-support systems, in the wake of a collision with an unmanned cargo rocket this morning. The crash, which damaged a solar array and punctured one module, resulted in a loss of as much as 50 per cent of the Mir's electrical power. Speaking at a NASA press briefing, Linenger characterized the Mir as ''a darkened ship'' and said the crew would operate ''in a slowdown mode'' until the effects of the mishap are corrected. The accident caused the space station to depressurize. The situation prompted quick action by the crew to seal off the affected Spektr module.

The accident has cut off US ham-astronaut Mike Foale, KB5UAC, from his sleeping quarters and personal items in the Spektr module. NASA Shuttle-Mir Program Manager Frank Culbertson said there was ''no indication of health and safety problems'' among the crew members, but that some of the experiments in the Spektr module may have been ruined. Culbertson said the collision with the Progress supply rocket happened as the crew was ''testing a new rendezvous technique'' to be used if automatic docking systems failed. In addition to Foale, the Mir is staffed by Russian cosmonauts Vasily Tsibliyev and Alexander Lazutkin. Foale has been aboard Mir since mid-May, when he replaced Linenger.

Linenger told the press conference today that it was too early to comment on what the latest problem aboard Mir might mean for the future of the 11-year-old space station, which already has outlasted its anticipated life span by six years. Linenger said fire and decompression are the two most dangerous things aboard a spacecraft ''and we've had both of those.'' During Linenger's four months aboard Mir early this year, the crew experienced a fire, a near

collision with another cargo rocket, and coolant system leaks.

Culbertson said repairs likely would require a space walk by the Mir crew. He also did not rule out the possible termination of the mission. As part of its response to the emergency, the crew prepared the Soyuz escape vehicle for possible evacuation. Culbertson said the crew would have to orient the station for optimal exposure to the sun to make the best possible use of the solar panels that remain on-line.

1824. Analysis/Synthesis Capability for Hams

Newsgroup: rec.radio.amateur.space
Date: 1997-06-25 00:00:00 UTC
From: Kathy Goerg <kgoerg@webblabs.com>
Message-ID: <33B18C4A.79D@webblabs.com>
Source record: 18584
Cross-posted to: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radioamateur..misc,rec.radio.amateur.space

Many amateur radio operators have contaced us in recent months regarding availability of affordable electronic analysis and synthesis tools. We have now released Version 2 of the Professional Partnership (PP) Program. While there is a one-time $975 charge, the PP program may be distributed throughout a club, organization or company. Of special significance is the profound level of Wireless/RF/Microwave capability included.

The PP Program includes:

Nodal Circuit Analysis with True Two-Node Port Definition
Unconstrained Noise Analysis
Transmission Structure Synthesis & Analysis
Over 40 Single & Coupled Topologies
Strip (Planar) Structures
Wire Lines
Coaxial Arrangements
Waveguide (Non-TEM) Topologies
Passive Filter Synthesis
Lowpass
Highpass
Bandpass
Prototypes
Practical Reactively-Coupled Realizations
System & Receiver Design Support
Link, Terminal & Radar Analysis
System Architecture Characterization
Spurious Analysis
Transmit & Receive
Coincident & Tuned
Preselector & Output Filtering
Phase Noise Analysis
Time Domain Effects
Frequency Domain Effects

500+ Page User's Manual with Examples & References

Acquire a single PP Program package for your club, company or organization, and you will be furnishing all of this needed capability to every designer, not just one! Our competitors are furious with us for having created the uniquely progressive opportunity. It seems they're still using dongles to hinder access to their own products.

Please contact me for additional information.

It seems difficult to get information on the controller described here.
Has anyone had any luck getting further information on this?? Any
standalone PC controller other than the TAPR "trackbox" would be most
useful. 73 Cliff Buttschardt K7RR

>satellites as long as a proper receiver is used?

If is possible to do that, but you shouldn't do that. The reason is that the MCW signal is a constant power signal. Those are discouraged on the amateur satellites because they use satellite transponder power even when not transmitting any information, and transponder power is limited and precious. Use CW or SSB on the analog transponders so that more of the limited power resource will be available to others attempting to use the satellite at the same time.

Note that this only applies to satellites which have linear transponders. Obviously satellites which don't have linear transponders have different requirements, IE AO27 wants an FM uplink, and the microsats want FSK uplinks. Those are constant power signals, but it doesn't matter since they're being received and decoded by the satellite before retransmission. They don't control the amount of downlink power consumed.

1841. 143.625 Frequency for Mir??

Newsgroup: rec.radio.amateur.space
Date: 1997-06-26 00:00:00 UTC
From: timw@juno.COM
Message-ID: <19970626.104232.7127.0.TimW@juno.com>
Source record: 18601

This morning (6/26), Art Bell referred to this frequency on his night-time talk radio show Coast to Coast A.M. He mentioned that this was a frequency Mir was using. I tuned to that during the latest pass here in Vancouver, WA, and heard a flow of Russian. Two questions:
1. What is this frequency being used for? Is it similar to the types of communications that the shuttle uses Ku-band and S-band?
2. Although this may sound like a no-brainer, is SAFEX and the packet robot still operational? I heard someone say that the amateur equipment was in the depressurized module that was sealed off. Is this true? If it is, and the equipment survives, it will make one great ad for Kenwood...

1842. MIR Downlink 143.625 MHz

Newsgroup: rec.radio.amateur.space
Date: 1997-06-26 00:00:00 UTC
From: ghiscox@netcom.com
Message-ID: <33b2acc5.33298944@10.0.2.1>
Source record: 18602

This morning, between 1027 and 1037 PDT, I could clearly hear the MIR spacecraft on 143.625 MHz as it passed over the Southern California area. The signal was strong, even with an omnidirectional antenna, although there was fading that is indicative of some spin on the spacecraft. It sounds like they are using a full duplex circuit so you can hear BOTH sides of the conversation on that frequency. Of course it would help if you can speak Russian.

Next pass over SoCal is 1203-1212 PDT.

1847. Re: 143.625 Frequency for Mir??

Newsgroup: rec.radio.amateur.space
Date: 1997-06-27 00:00:00 UTC
From: dj0my@aol.com
Message-ID: <19970627190200.PAA14056@ladder01.news.aol.com>
Source record: 18607

Hi there !

It seems that there are still people out there which don't
know anything about the MIR onboard radio systems.

Here some informations:

143.625 MHz is the primary MIR downlink channel to communicate
with the control station TsUP in Kaliningrad (Star City) near Moscow.

It is either received direct by different groundstations spread all over
the CIS. When US "cosmonauts" are involved in the missions they
can also relay through groundstations in the US to their control center.
Therefore they are able to extend their communication time "slot" with
their control station in Russia.

In some occasions it is also possible to relay the signal via a
geostationary
satellite (either ALTAIR on 16° West or LUCH-1 on 77° East). Latter are
used
also for relaying their TV transmissions from space to the ground station.
The geostationary system is rather old fashioned compared with the US
TDRS-Satellites used by NASA to communicate with the Shuttle. The Russian
geosats downlink the signals on the KU-Band arround 10.8 GHz....

There is also a secondary channel (somewhere in the AIR-Band arround 130
MHz)
which is used in very special cases (e.g. coupling manouvers,
spacewalks...)

You can hear the 143.625 MHz transmission on almost every orbit the whole
year long (but only in the "working" times of the crew) here in Europe.
So we
have a little advantage compared with the US receiving amateurs. The only
disadvantage is, that most of the traffic is in russian language.....
But I have a Russian colleague at work..... ;-)))

Many years ago (at times of the USSR) they were using several ships on
different oceans to relay the MIR communications through HF links to the
control center in the former USSR.

Except of the voice channels there are also some telemetry channels in
the VHF and the UHF frequency range.....

So far my short description about the MIR radio systems.....

Best regards,

Oscar, DJ0MY
Neu-Ulm
Germany

This is a downlink frequency used by some Russian navigation satellites.
There are four of them that use that frequency.

>Hello, all: is it possible to use a modulated continuous wave signal (MCW
>as described in this month's QST) with a handheld to work the OSCAR

>satellites as long as a proper receiver is used?

This is a quibble, Gary, mostly to clarify my understanding. It doesn't seem like MCW is inherently evil, as that represents a variety of emission types. Given a sufficiently pure sine wave as modulation, isn't emission type J2A (SSB) almost indistinguishable from CW? Even A2A (AM) ought not take more bandwidth than twice the frequency of that sine wave.

The problem comes with what is probably being suggested ['haven't seen the relevant QST yet], that is, MCW using emission types F2A or G2A (frequency or phase modulation) which uses completely unacceptable bandwidth for satellite transponders [as opposed to repeaters, such as on MIR, AO-27 or AO-21 (currently SK)]. The best you *might* be able to do is to make a fake microphone out of a suitable value of resistor and a telegraphic key. If you've a remembered to turn off PL (*important*), i think you'll be sending an FM carrier with very little modulation which might be something like CW that sounds bad and drifts horribly, and probably should only be tried at a time when almost no one else is on, to find out that one *could* use a given satellite if one obtained the proper equipment.

In short, don't use FM with a non-FM satellite!!!

Now, can anyone suggest a homebrew 2M transmitter (CW or SSB) so those of us who don't have $300-$500 (or more) and/or an HF rig lying around can experiment with such things without potentially causing serious interference?

-- KD6PAG (networking old-timer, RF newbie)

P.S. You can often find me trying AO-27 on most daylight passes that give at least 20 degrees elevation in the S.F. Bay Area. If you can hear it, then you can probably work it.

Both SAFEX and the VHF equipment were shut down until the coolant leak was fixed, so if they're short on power, it's probably one of the first things to get powered off.

1858. Detection of forward scatter from satellites?

Newsgroup: rec.radio.amateur.space
Date: 1997-06-28 00:00:00 UTC
From: thomsona@netcom.com
Message-ID: <thomsonaECI6Ao.HFH@netcom.com>
Source record: 18618

Are there any reports of detections of forward scatter effects when
aircraft or low-orbiting satellites passed between ground-based receivers
and geosynchronous comsats? Or of attempts to do this that failed?

1860. MIR prediction site

Newsgroup: rec.radio.amateur.space
Date: 1997-06-28 00:00:00 UTC
From: Kees Leune <s722413@kub.nl>
Message-ID: <5p40ff$623$3@mailnews.kub.nl>
Source record: 18620

For those of you who are interested in listening to MIR communication, you can visit my MIR prediction page to estimate when the station will be in your range. Used frequencies are on the page as well.... for those of you who speak Russian, you might also want to monitor 143.625, that frequency is used to communicate with Moscow I think

$$$ Mailbox Cash $$$

A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah, right, this must be a scam," but like most of us, but I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups. (There are thousands.) No catch, that was it.

You can make up to or over $50,000.00 in 4-6 weeks, maybe sooner! I SWEAR, I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested in making some big bucks, keep reading; if you're not, I apologize for wasting your time.

So after thinking it over, talking to a few people first, I figured what have I got to lose except for 5 stamps and $5, right? One person who very recently had tried it said it worked like a charm. He started getting money in the mail! He was shocked! He figured it would end soon, and didn't give it another thought. But then the money kept coming IN - tripling in size and multiplying by 10 - 20 times the amount that he got the first week! In his first week he had made a total of over $1,000!!! In the third week he had over $10,000 dollars, and it's still growing! This is his fourth week and he's made about $42,000 Total, and believe it or not the money is still coming in...

I know this has been checked out several times with the legal community and is deemed perfectly Legal, but being a very cautious person, I also wanted to check it out with the US Post Office. I called them (1-800-725-2161) and explained this process and asked if there were any
~~~

regulations that would be violated doing this. Without hesitation, the postal official also said it is legal. At that point, I felt comfortable going ahead and joining the process.

Let me tell you how this works and most importantly, WHY IT WORKS!...Also, make sure you print a copy of this article NOW, so you get the information from it, and begin making money. The process is very simple, and it consists of 3 ease steps:

STEP 1: Get 5 separates pieces of paper and write the following on each sheet of paper: "PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER #."

Get five $1 bills, and place ONE inside each piece of paper that you have just written on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosy people who like to steal envelopes with money in it will not get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, each having a piece of paper AND the $1 bill inside. NOTE: Make sure those words that were stated above are written on each piece of paper. What you are doing is creating a service by this. This is PERFECTLY LEGAL. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

#1 T. Love
109 Wildwood Dr.
Sanford, Fl. 32773

#2 A. Lillian
449 Bch 68th St.
Arverne, NY. 11692

#3 D. Dixon
36 Ambrose St.
Charlottetown, PE C1A 3PC1
Canada

#4 G. Cisnero
VLN1151
P.O. Box 025685
Miami, Fl. 33102

#5. E. Perkin
2838 Tilghman St,
Allentown Pa. 18104

STEP 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well, do exactly the
following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To News,
which
is in the top left corner of the newsgroup page. This will bring up a
message box.

2) Fill in the SUBJECT with a flashy title, like the one I used,
something to catch the eye!!!

3) Now go to the message part of the box and retype this letter
exactly
as it is here, with exception of your few changes. (Remember to add your
name to number 5 and move the rest up)

4) When you're done typing in the WHOLE letter, click on FILE
above
the
send button. Then, SAVE AS.. DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE
IT. (So you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your
first
copy! (Click the SEND button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article
and
click the TO NEWS button again. Type in your flashy subject in the
SUBJECT BOX, then go to the message and place your cursor here. Now
click on ATTACHMENT, which is right below the SUBJECT BOX. Click on
attach file then find your letter wherever you saved it. Click once on
your file then click OPEN then click OK. If you did this right, you
